If I remember, you put in the low frequency, then hit limit, then the
upper frequency, then limit, then search.

There are always DX opportunitities, like when it's cloudy or extremely
warm outside, just like with good ol' FM.

They use FM and are usually found from 160.110 MHz to 161.565 MHz, in 15 KHz steps.

Check this site for some good info on RR freqs:
http://zippy.cso.uiuc.edu/~roma/rr-freqs/

Have fun,

Jackie

1130. Yaesu VR-120D DC input and other newbie questions

Source record: 14640

Greetings

Does anyone have the technical specs of what the DC input requirement is for the VR-120? The manual suggests the DC input is between 5.5V and 10 however the tip polarity is not listed. Also what size is the actual DC input jack considered? It's pretty tiny with a tiny pin centre. Is it relatively generic or proprietry?.

Also does anyone know if it's possible to pick up and decode some of those digital carrier signals with this scanner and if so how?

Thanks peeps.

DLT.

1132. IRC radio monitoring

Newsgroup: rec.radio.scanner
Date: 2005-02-25 08:05:03 UTC
From: Barnard Peters <one@two.com>
Message-ID: <y7mdnUEhpveyQYPfRVn-1A@comcast.com>
Source record: 14642

Though utility radio communications monitoring is fun and interesting all by itself, there is more fun to be had participating in live interactive radio monitoring with colleagues from around the world who share the same interest. Having dozens of ears scanning the bands really adds to the excitement. Having more people on-line means having more ears on the bands. This posting is an effort to add more people to zirc.org #monitor

Entry level as well as experienced listeners are welcome to join.

More info is at: http://s91586483.onlinehome.us/monitor/

To connect to IRC, you will need an IRC client. Mozzila and netscape have one built in or there are many you can download and install. You will need to connect to irc.zirc.org or pick a server from the website at zirc.org. To connect, type "/server irc.zirc.org" and once connected type "/join #monitor". There is a web based client at http://www.zirc.org/chat/

Once logged on, simply start posting what you hear or just be a fly-on-the-wall and watch what other people post and follow along on your radio!

Thanks Ender for your answer.

I have a copy of the service manual of the SX-200 but I can't locate a
reset switch... it's sure is not external.
I'll examine again all the schemas more in details.

I bought My SX-200 for 40 euros 3 years ago and worked very well: it
was quite good on air-band...

Just for curiosity, on the SX-400 the reset switch is internal or
external?

Bye,
Fac

1135. ISO DC adapter

Newsgroup: rec.radio.scanner
Date: 2005-02-25 10:32:02 UTC
From: TomCat4680 <tomcatgbmi@aol.com>
Message-ID: <1109327522.074512.239630@z14g2000cwz.googlegroups.com>
Source record: 14645

i want to get a DC adapter for my Pro 96 and Pro 92.

The Pro 96 manual say needs a 9 volt, 300 mA adapter (no catalog number listed), and the RS site says it needs RS catalog number 273-1863, which is 1000 mA. I'm assuming this is a misprint, but lets not get into rants about how we hate Radio Shack, its been done thousands of time. (i love them btw).

then i looked in the Pro 92 manual and it says it also needs a 9 volt, 300 mA adapter and recomends catalog 273-1810, which is the right mA for both the Pro 92 and Pro 96, but according to the RS site, it isnt sold any more. again, no need for ranting.

i know which adapta plug i need for both (C for 96 and H for 92, according to the manuals)

so which one do I need?

thanx
Tom

1136. Where does RS pull freqs from to program scanners (P-95), etc.

When Radioshack offers to program your scanner, what website or resource do they use? Please share this magic.

Do you get to choose trunk and conv. or is it a just a dump defined by RS by state or county or what?

I have the pro-95 and the cable and win95 and I'm pretty much all set, just curious.

Barknee wrote: Federal law superceeds state and local laws.

Many states disagree. They say state law supercedes Federal law.

And they give the reason as the U.S. constitution says that any rights not specifically granted to the Federal government by the constitution belongs to the states.

Cases in point. The highway funding of the early 70's over the 55 MPH speed limit.

The Federal Government wasn't able to legally make a law requiring all states to obey the 55 mph limit because the rights belong to the state.

The states even said so.

To get around this, the Federal government simply threatened to withold federal funding for the roads from any state who didn't reduce the speed limit to 55 MPH.

Try telling them that around here... Here's an example:

Being in Michigan, a person needs a permit to possess a scanner in their vehicle. Local "enforcement" doesn't want you to listen in on their activities. Of the three people in my family that applied for and received those permits, I'm the only one that still has one. The other two have had them revoked due to these "criminals in uniform". I'm thinking that the only reason I still have mine is that I work 3rd shift and am not out much during the day, thus not being as "visible" or "accessible" as the other two are...

Around here they actually make up stories and send them to the Communications Director in charge of issuing the permits. They make erroneous claims (see below) that can't be proven either way by either party, but since they are "the law", their word has more power than the common citizen, thus no recourse for the innocent. As I have stated and will continue to state, corruption runs rampant in my area...

1: One was "following emergency calls and showing up at the scene". Funny, he was in the area, fishing, before the call ever even came in, but it was a

good excuse to pull his license...
2: One was "convicted" of "publishing" because he was found to possess a notebook with a list of frequencies in it that he had programmed into his scanner. Another good reason to pull a license...

If the relatives were as paranoid & 'militant' as you seem to be when they were stopped for whatever reason, it's no wonder the police opted to strictly & perhaps creatively enforce all applicable laws. I assume your relatives had the opportunity to go to court over the matters, so either they failed to do so, or perhaps next you'll ramble on about how all the courts are corrupt, too.

1144. Re: PRO-95 Scanner questions

Newsgroup: rec.radio.scanner
Date: 2005-02-26 00:12:11 UTC
From: Paul Hirose <iszintjv55@earINVALIDthlink.net>
Message-ID: <421FBE80.AE3EBA8E@earINVALIDthlink.net>
Source record: 14754

There was a thread on the PRO-95 back in September, and I gave my
opinion. Bottom line: a good buy, but could have been much better if
Radio Shack had given it a well-designed user interface.

http://groups-beta.google.com/group/rec.radio.scanner/msg/e40077f23e818c00?dmode=source

In general, the trunking features of the user interface are inferior
to their conventional (non-trunking) counterparts, and are accessed in
a completely different manner. I get the impression the trunking
firmware was spliced into existing firmware from some other scanner.
Or the conventional and trunking programmers worked in separate
buildings (countries?) and didn't communicate much.

The scanning itself works marvelously. I'm typically monitoring a
Motorola trunked system, an EDACS trunked system, and a bunch of
conventional channels, simultaneously. The PRO-95 handles that mix of
traffic with hardly a glitch.

One PRO-95 tip involves the SEARCH function, which continuously sweeps
through a range of frequencies. When it finds an active one, it stops
and gives you the option of storing that freq in the first available
channel of any bank you specify. It helps if you keep the lowest
channels of that bank empty so all your "catches" will be grouped
together for review later.

In the trunked talkgroup storage area, I also keep the lowest sub-bank
of each bank empty for the same reason. If an interesting group that I
didn't know about comes on the air, I can use a quick button push to
store it at the bottom of the bank.

There's a bug I encounter when scanning a trunked Motorola UHF low
band system. When I turn another bank on or off (either my EDACS bank,
or one of my conventional channel banks), the PRO-95 often loses its
ability to trunk the Motorola system. Instead, the scan keeps stopping
on the control channel as if it were a conventional channel. The cure
is to press MANUAL then SCAN.

You can use an adapter with a higher current rating than 300 mA--so although 1000 mA is way overkill, it won't hurt anything. The good thing about getting one with a higher current rating is that you may be able to use it with other equipment, too (or both radios at the same time if you get a Y-cord for the Adapt-A-Plug system). The bad thing is that the higher current rating model will generally cost more. The current rating must be at least as high as the amount of supply current that the unit uses (usually found on the specifications page in the manual).

Hi
I bought a Bearcat 800XLT couple years ago and just now started to listen late at nite.
The top antenna is still intacked but the back one is missing.
I live in a heavy wooded area with 2 -14 story towers in front and a monster size pine tree on the edge of my patio facing my living room where my scanner is located.
I have been looking into discones but this is a rental, no drilling holes.
Can some one in group please advise me what type of indoor antenna to purchase as I have no clues what is good or not worth the money.
I have seen some discones that clip on your windows but don't want to take the screens out of my windows as there are a lot of wild life in my area.
Any help I would be grateful. Private e-mail welcome.

Attemped to post a FA: post here. (Ive seen a few and none of the posters were flamed). Got a error message that only shows for about 3 seconds, to the effect of Rec.radio.scanner doesn't allow Auction posts.

Wow. I'm impressed! Unfortunately, not all servers have that filtering, I'm sure. And I'd bet it's not content (i.e. body of the message) filtered. So for example, if someone put simply "Model XXX scanner" in the body, and then (well - I guess this will be the test huh) "I have a Model 1234 scanner for auction on ebay,
See my auction,
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=123456789
I bet the content filter will let it pass.

Too bad the content filter isn't on every server and on the body. We'd never see another "Hello you don't know me, but I come to you with a great financial opportunity. My family all died in a massive car bombing, leaving me with 30 million dollars in a safety depost box..."
or
"I need to get this off my chest before I explode! My name is Stephen Ducharme..."

:)

Get one of the Micro Mag Triband antennas such as this one from RandL
Set it on a pizza pan or cookie sheet and it move it around until you
get the best reception. Sorry R&L isn't big on pictures, but they are
an honest retailer.

We'd like to invite you to join our free
WORLD SCIENCE e-newsletter, which
contains some of the world's most exciting
science news and photos long before they're
in the papers and magazines. A sample
newsletter is below.

To join, just send an email with "subscribe"
in the subject line to:
neutrino750 @ yahoo.com (remove the spaces).

The newsletter, sent out about every 3-10
days, contains short summaries of our new
stories, with links to web pages containing
the full stories. It's free: no pop-ups, passwords,
spam, or gimmicks -- that's our pledge! The full
story pages do contain small side ads (non
pop-up), which are what supports our news-
letter. YOU pay nothing ever. You can cancel
anytime simply by replying to a newsletter
email and typing "unsubscribe" in the subject
line.

Below is a sample newsletter. It doesn't
contain the full story links because we're not
allowed to provide them here, but the real
newsletter will contain working links.

****
LAST WEEK'S WORLD SCIENCE EMAIL
NEWSLETTER

* Possible dinosaur-bird missing link found:
It's not the first bird-like dinosaur ever found --
but it is the closest yet found to the actual
dinosaur ancestor of birds, researchers say.

Click here for full story (link will work in the real newsletter)

* Science in Images - A more life-friendly Mars:
Most Mars photos show a rocky, dry-looking land-
scape. This is another view: an area of the planet
that researchers think might have once been
habitable. They plan to explore further.

Click here for full story (link will work in the real newsletter)

* Another record: biggest blast ever in our
galaxy:
The most powerful explosion in our galaxy ever
recorded occurred recently when an exotic star's
magnetic field snapped, astronomers say.

Click here for full story (link will work in the real newsletter)

* New robots walk nearly like humans:
An older robot does it too, but it used 10 times as
much energy as humans do, researchers say; that is
changing.

Click here for full story (link will work in the real newsletter)

* Brain doesn't have universal language rules,
researchers claim:
Some researchers argue that language is more like
a creation of itself than a creation of our brains.

1160. scanning FRS/GMRS radios.

Newsgroup: rec.radio.scanner
Date: 2005-02-28 06:58:40 UTC
From: tom <cyberhun@shaw.ca>
Message-ID: <AizUd.523789$8l.446764@pd7tw1no>
Source record: 14770

Do FRS/GMRS radios use wfm, nfm, or other scannable, non-digital modulation modes?
All I can find on the fcc site is power level restrictions and whether or not you can have a detachable antenna.

1161. sc230 Vs. BC246T

but that describes data movement not the radio definition

Simplex
is where only one channel is in use. each party take their turn to TX & RX.

Semi-Duplex or Half-Duplex
is where two channels are in use, either party 'can' RX & TX at the sametime
(if enabled) but both cannot do it simultaneously.

not to be confused with
Split,
which is the same as simplex but on two channels.

Full Duplex
is same as above where it can be done simultaneously (like a telephone)

There are three programs that I aware of that can do speech inversion through your computers sound card. I see that you have already found one of them though an online link. If you have access to alt.binaries.radio-scanner, I will upload all three of those files to that group... Most likely one of them you already have, if "invert.exe" is the same as the one I have by that name...

yep maplin do adapters though a short lead to relieve the weight on the scanner socket would do better.

I'm about 5 years into listening sw, ham, utilities on tabletop
Bearcat, Icom R75, and
Grundig 800...and am ready for next level, after spending 4 of those
years working
on antenna setups ,-)

'would appreciate recommendation for midlevel listening tabletop model.
And if I order
from Canada, how can I get one free of cell blockage (if possible)?

Thanks and regards from Atlanta, GA

About 50GHz of spectrum.

23cm ham bands, 2.4GHz wifi.
2.6GHz TV video feeds
3.9GHz satellite feeds.
Too much to list

Nana

Icom is known for some pretty eccentric radios - In particuliar I'm put off by their tendancy not to be able to scan banks in any order you desire. For instance, if you wanted to listen to just bank 5 and bank 7, theres no way to do it. You have the choice of listening to them all, or just one - A fatal handicap in my view.
Maybe their not all like this. I know some of the most popular ones like R-10, R-20 are.
But of course Icoms are quality products, packed with features and well supported.
I've heard AOR customer support is practically non-existant, though they got some nice radios no question about it.
Best bet is to narrow your possibilities down to a few, and seek info about them all.
Try ebay [other brands]http://tinyurl.com/3u4ug to give you some ideas, and though this link isn't working now for some reason http://www.strongsignals.net/access/reviews/reviews.cgi got some excellent reviews if the page ever comes back up again.

>
> Thanks and regards from Atlanta, GA

Well, units from canada are unblocked by default.
Any outfit in canada will gladly ship you one, if you want to take the chance.
Question is, is having an unblocked scanner worth a couple hundred $$$ extra, and do you want to take the chance of U.S. Customs seizing it ?
Better order with a CC so you can do a chargeback if it gets confiscated at the border.

When you decide you want a scanner, you then have to know what you wish to
listen to. Many Police and fire departments have gone to a "trunked" system.
Many places on the net will explain this. If that is what the community you
wish to listen to uses you would want a scanner that had the ability to
follow these calls.

You know, you shouldn't make "ass"umptions. It really does make and "ass" out you...

I don't follow around the police. I don't participate in any of the "activities" on that website. I simply agree with the idea behind what they do. I have no part of them, aside from the link I give them on my website...

I do make every attempt to gain proper justice, but it's not easy when the entire local court system, as well as the lawyers are all "in on it". It's a smaller city, and the lawyers around here know that if they want to make a living, you don't go up against anything that has to do with local government. If they do, they can be assured that they won't be on the "winning end" of most court hearing.

I have attempted, recently, to fight a bogus seatbelt ticket. Typical made up story crap by the officer. I made it up to the third level of the local court system; from informal with the magistrate, to formal with the district court, then on up to circuit. Problem was, because I can't afford a lawyer, let alone one from outside the county (since them winning here won't effect their business practices in their own county as much), I was too late in getting the proper paperwork submitted to the court system. It ended up taking too long to do the research on what exactly needed to be done. It's not easy doing it on your own, I know, I've done it many times before, generally successfully. This time was one of the exceptions, as I've never had to take it to circuit court. If it wasn't for the officer lying in district, it wouldn't have made it that far, this time, either...

1198. BC898T SS Software Problem

Newsgroup: rec.radio.scanner
Date: 2005-03-01 21:47:31 UTC
From: Ernie <ernie9@hotmail.com>
Message-ID: <XsidncV8ke9vf7nfRVn-hQ@giganews.com>
Source record: 14558

Can't seem to be able to get the BC898T SS Software to work with my BC898T scanner. Not much help in the software manual. Has anyone been able to configure this software to work with 898 scanner?

> >

Nothing has been left out... It is told as it was.

You can't fight something in court if you can't afford it. One of the individuals is unemployed, collecting Social Security for a disability, and can hardly live on what he gets as it is. The other works fast food, as he is not of the "career" age yet. Are you going to provide the funding for the hearings and/or trials? Didn't think so...

> > >Communications Director in charge of issuing the permits.
> >
> > And it's up to them to actually prove these stories when you drag it
through
> > court.
> >

See above... They know the individuals can't afford it, so they don't have any worries about it...

> >1: One was "following emergency calls and showing up at the scene". Funny,
> >he was in the area, fishing, before the call ever even came in, but it was a

>
> Just showing up at calls is not illegal, so long as you don't interfere with
> their job.
>

Well, maybe where you are, but in Michigan it IS illegal if you posses the permit (possibly even without it). The very section just above where you sign the permit application, states:

"I agree not to use the vehicle equipped with a short wave radio receiving set in the commission of a crime or to assist anyone in doing so. **I agree not to answer police calls or pursue police vehicles answering radio dispatches** if a permit is approved for any police frequencies. I have read and understand Section 605 of the Federal Communication Act of 1934 concerning unauthorized publication of communications. I certify the foregoing statements are true"

> >2: One was "convicted" of "publishing" because he was found to possess a
> >notebook with a list of frequencies in it that he had programmed into his
> >scanner. Another good reason to pull a license...
>
> I don't know what "convicted of publishing" means, but if someone has been
> arrested and found guilty of a certain crime, perhaps Michigan's scanner law
> details this as a reason to no longer have a mobile permit. Do the research
> and if they're in the wrong, oh well......
>

Neither were arrested, or ticketed, or anything of the such. With incident #1, only a "verbal warning" was issued, even though there was no reason for it. With incident #2, the notebook was confiscated, never to be returned... Nothing was said about revoking the permits, or anything even remotely close to it, yet about 2 months later, letters from the Communications Division were received, in both cases, stating that the permits were revoked. Neither of the parties were in the wrong, and, I have done the research.

Below is Section 605 Subsection "a" of the Federal Communication Act of 1934, which is found on the back of the permit application. This will give you an idea of what is meant by "publishing". As you can see by the text, making a list of frequencies is not illegal, only the writing down (publishing) of the content which has been "heard" from the scanner is illegal, yet they made claim, regardless, that he was "publishing" police activities...

_ [text] _ - Areas that are underlined within the text on the permit
** [text] ** - Areas that are relevant to what I am saying

Sec. 605. Unauthorized Publication or Use of Communications.

(a) Practices Prohibited.

Except as authorized by chapter 119, Title 18, **no person receiving, assisting in receiving, transmitting, or assisting in transmitting, any interstate or foreign communication by wire or radio shall divulge or publish the existence, contents, substance, purport, effect, or meaning thereof**, except through authorized channels of transmission or reception, (1) to any person other than the addressee, his agent, or attorney, (2) to a person employed or authorized to forward such communication to its destination, (3) to proper accounting or distributing officers of the various communicating centers over which the communication may be passed, (4) to the master of a ship under whom he is serving, (5) in response to a subpoena issued by a court of competent jurisdiction, or (6) on demand of other lawful authority. *_No person not being authorized by the sender shall intercept any radio communication and divulge or publish_* the existence, contents, substance, purport, effect, or meaning of *_such intercepted communication to any person. No person not being entitled thereto shall_* receive or assist in receiving any interstate or foreign communication by radio and *_use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto._* No person having received any intercepted radio communication or having become acquainted with the contents, substance, purport, effect, or meaning of such communication (or any part thereof) or use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto. This section shall also apply to the receiving, divulging, publishing, or utilizing the contents of any radio communication which is transmitted by any station for the use of the general public, which relates to ships, aircraft, vehicles, or person in distress, or which is transmitted by an amateur radio station operator or by a citizens band radio operator.

>
> If you're in the right, fight it. Either that, or don't complain about it.

I do what I can with regards to such things, unfortunately, the two that have been treated unjustly are unable to do so for reasons like those stated above.

Just checked, couldn't see any.
By the way, can you see only 3 posts in that group? My newsreader (outlook) only shows 3 posts total in "alt.binaries.radio-scanner". Maybe that's because it's set to ignore ones that are older than a certain length of time, I don't know.

1205. FS: General Electric Portable Transceiver w/ charger (161 Mhz range)

Newsgroup: rec.radio.scanner
Date: 2005-03-02 04:44:58 UTC
From: Ad Hoc Guy <PussyFart@hic-ups.org>
Message-ID: <bxbVd.24863$kz6.506211@news20.bellglobal.com>
Source record: 14565

Black portable GE model MVP ,3 channel transceiver once used for railroad operation.
Has CN ch.1 ch 3 ch 5.
Comes with Charger. Battery is 7.5 volts Ni-Cad type twist on. But is kinda tired and needs replacement. Radio is 10 years old approx. But in great shape.No damage whatsoever.
Radio works fine. Clear as a whistle.
Email me for photos. Only serious offers considered.

In technical Term , it's called Blackmale. and it's legal !
Federal Governments anywhere have certain Judicial and Political powers over States, But for the Justice,transportation highways, Municipal,schools and law enforcement, it's all under State Jurisdiction.
Any State that votes a law for instance, cannot extend beyond Federal Jurisdiction or be more restrictive than the Federal Legislation.That,s where the Civil Code would come in handy if you guys had one instead of the "common law" under the Constitution.
A civil code for instance would give States more decisive power but limited again with regards to going beyond the Constitutional amendments.

You can select which banks you want to scan on the IC-R20.

Anybody have any known frequencies for things in Derry ? Or N. Ireland?

Eglinton Airport ? (City Of Derry Airport).

Taxi's etc.

Anything else.

Thanks a lot.

Excellent.
This has been a major annoyance, and really a fatal flaw, with every Icom handheld up to the R-10. So you are saying that if you simply want to scan bank 2 and 7 only, you can do it ?

Source record: 14573

I used to police/fire scan 25-30 years ago and was thinking about getting back into it. I see where everything has gone to trunked systems-- and I also notice some big clearance sales on this kind of gear.

One guy told me it's all going to go digital now-- so I guess that means new equipment...and thus the current trunking stuff (I assume analog) is going to be obsolete soon?

What to buy? How much to spend?

Ike

Where do you live? Not all cities have gone to either trunking or digital.
Mine just changed over to trunking, but the county here has not and has no
plans at this time, to spend the money. If you post where you are there may
be people who can tell you whether you even need a trunking scanner, or if
your area is getting ready to up grade.

1216. GET QUICK MONEY EASY AND LEGAL HERE!!!!

Newsgroup: rec.radio.scanner
Date: 2005-03-03 03:32:53 UTC
From: russellbritney@aol.com
Message-ID: <1109820773.629197.45160@f14g2000cwb.googlegroups.com>
Source record: 14576

Date: FEB 2005 Author: B. Russell Subject: MAKE QUICK EASY MONEY FAST! EARN LOADS OF MONEY, HONESTLY, FAIRLY, AND LEGALLY Greetings All, MAINTAIN DISCIPLINE, HONESTY AND PATIENCE...Above all else FOCUS! I found this on a bulletin board and decided to try it: A little while back, I was browsing through news groups and e-mails just like you are now, and came across an article similar to this that said you can make thousand of dollars within weeks with only an initial investment of $6.00. So I thought, "yeah right, this must be a scam," but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the six names and addresses stated in the article. You then place your own name and address on the bottom of the list and post the article in at least 200 news groups. {There are thousands}. No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured, "What have I got to lose; except six stamps and $6.00 right, right?" Then I invested the measly $6.00. WELL GUESS WHAT?.....Within seven days, I started getting money in the mail I was in awe. I figured it would end soon, but the money just kept coming in. In my second week I grossed only $17.00. Several weeks thereafter I had collected approximately one thousand dollars. In each consecutive week I am averaging more than the preceding week and it continues to grow. Currently, I have made a few thousands and it is still coming rapidly. It is certainly worth the six-dollar investment and six stamps, believe it or not I have spent more on lottery with no returns. Let me explain how this works and most important, why it works.....Also, make sure you print this article out NOW, so you can get the information. STOP NOW: Print this article out so you can get the information you need off of it. I promise you that if you follow the directions exactly you will start making more money than you thought possible by doing something so easy. Suggestion: Read this entire message carefully, and follow the simple directions and watch the money come in. It is easy, It is legal, and your investment is only $6.00 plus postage. Important: This is not a rip-off, it is decent, it is legal; and it virtually without risk- it really works! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow the directions EXACTLY, and 50-thousand-dollars or more can be yours within (3) months. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become a part of the Mail Order business. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, this money made from the mailing lists is secondary to income which is made from people like you and me asking to be included on that list. page one ere Are The Four Easy Steps To Success: Get six (6)

separate pieces of paper and write the following on each piece of paper. "PLEASE PUT ME ON YOUR MAILING LIST." Now get six (6) U.S.1.00 bills and place One inside of Each of the six pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the six envelopes and seal them with the dollar bill enclosed. You now should have six sealed envelopes each with a piece of paper stating the above phrase with your name and address written thereon [don't forget to enclose the $1.00]. What you are doing is creating a service-THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it. Clearly, I was a little skeptical and a little worried about the legal aspects of it all. Therefore, I checked it out with the U.S. Postal Service (1-800-275-8777) and they confirmed that it is indeed legal. Mail the six envelopes to the following addresses: [1] J. Force 701 SE 15th Street # 8 Ft. Lauderdale, FL 33316 [2] Myla Lette 400 S Kingsley Dr.#304 Los Angeles, CA 90020-3224 [3] Mrs. Florence Y. Moore 400 S. Kingsley Drive #304 Los Angeles, CA 90020-3224 [4] A. Person P.O. Box # 5156 Philadelphia, PA 19141-5156 [5] Andrew Biela 3776 Capitol Warren, Michigan 48091 [6] Britney Russell 1812 Garrison Plantation Marietta GA, 30060. Now take the #1 name off the list that you see above, move the other names up (six becomes 5, and 5 becomes 4, and etc.) and add YOUR NAME as number 6 on the list. Change anything you need to but try to keep this article as close to the original as possible. Now post your amended article to at least 200 news groups. (I think there are close to 24,000 groups). Page two All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal. If you have any doubts, refer to Title 18 Section 1302 & 1341 of the Postal Lottery Laws. Keep a copy of these directions for yourself and whenever you need money you can reuse it again. Please Remember: That this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to directions. Look at it this way, if you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. Also, it is a good practice to wrap the $1.00 bill in dark paper to avoid the risk of mail theft. So, as each post is downloaded and the directions carefully followed, all members will be reimbursed for their participation as a List Developer with one dollar each. Your name will be moved up the list geometrically so that when your name reaches the #1 position you will be receiving Thousand of Dollars in Cash! What an opportunity for only six-dollars ($6) one-dollar ($!) for each of the six people listed above. Send it now, add your own name to the list and you are in business. Directions For How To Post To News Groups You do not need to retype this letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select copy from the edit menu. This will copy the entire letter into the computer's memory. Open a blank notepad file and place your cursor at the top of the blank page. From the edit menu select paste. This will

paste a copy of the letter into the notepad so that you will add your name to the list. Save your new notepad file as a text File, if you want to do your posting in different settings, you will always have this file to go back to. Use Netscape or Internet explorer and try searching for various new groups (on-line forums, message boards, chat sites, discussions). Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You are finished You have finished your first posting. Congratulations! THAT'S IT. All you have to do is jump news groups and post away, after you get the hang of it, it will take about 30 seconds for each news group. ***REMEMBER THE MORE NEWS GROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!*** IT IS A MOST FOR YOU TO POST A MINIMUM OF 200. "That's It" You will begin receiving money from around the world within days. You may eventually want to rent a P.O. Box due to the heavy volume of mail you will be receiving. If you wish to remain anonymous you can adopt another name to use, if it agreeable with the postman to deliver the mail. MAKE CERTAIN THAT ALL ADDRESSES ARE CORRECT. Now the Why part: Assume for example you get a 7.5% return, which is very conservative. Please view the following estimated breakdowns page three Estimated breakdowns: When you mail 200 letters, 15 people will send you $1.00 Those 15 mail out 200 letters, 225 people will mail you $1.00 Those 225 mail out 200 letters, 3,375 people will mail you $1.00 Those 3,375 mail out 200 letters, 50,625 people will mail you $1.00 Those 50,625 mail out 200 letters, 759,375 people will mail you $1.00 By now your name has dropped off the list, but so far you have received at least $759,375. With an original investment of only $6.00 [plus postage]. AMAZING! When your name is no longer on the list, you take the latest posting in the news groups, and send out another $6.00 to names on the list, putting you name at number six [6] again. And start posting again. You have to remember and realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU right now. So you can get $6.00 and see if it really works. People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest people who are joining every day and are willing to give it a try? Estimates are at 20 to 50-thousand new users, everyday, with thousands of those joining the actual Internet, Remember, play FAIRLY AND HONESTLY and this will really work. Sincerely, Subject: RE: MAKE QUICK EASY MONEY P.S. Hereafter, all confirmations of your name being placed on the "mailing list" will no longer be mailed to you directly due to the postage increase. You must have an E-mail address or access to an e-mail address to be notified of your name being placed on the "Mailing List." Don't forget to enclose an e-mail address along with your address. page four

Believe it or not, I thought I was sending that post to another group, but what happened was that a different group-name had the focus than I thought had the focus, so when I clicked on the send button it went to a different group than I was trying to send it to.
Aggravating the situation is the fact that this NNTP server doesn't seem to carry out cancel requests, so I couldn't remove it.

1219. query re the elusive GE/EDACS traffic

Newsgroup: rec.radio.scanner
Date: 2005-03-03 04:54:05 UTC
From: tom <cyberhun@shaw.ca>
Message-ID: <NLwVd.560659$6l.33787@pd7tw2no>
Source record: 14579

I thought it was supposed to be impossible to intercept GE/EDACS traffic?!?
I asked about this a couple months ago (I think it was this group, maybe not
though) concerning a canadian municipal PD GE/EDACS system, and the
consensus was that it couldn't be done. Then I came across an ad on a
webpage:

PRO-2096 Digital Trunking Mobile/Base Scanner
EDACS Trunking Mode (ED) - You can set your scanner so it decodes talkgroup
IDs used with EDACS (GE/Ericsson/M/ACOM) trunking systems. This setting is
called the EDACS mode. EDACS systems are used primarily by business or
private communications service providers, as well as by some public safety
organizations.

So, is it possible or not? Is the difference maybe that the PD is using
some digital mode?

First thing you probably want to do is hook up with a scanner enthusiast in your area who's familiar with the local scanning scene. If you're really lucky, the folks at your local Radio Shack may be able to tell you what's going on and supply you with the major local scanner frequencies for free. I really wouldn't worry about having to buy digital equipment now if your locale is operating a regular or trunked system. Most municipalities spent a fortune going trunked and don't want to spend more to go digital. It could be years before they make the switch and by then there will probably be other technologies to consider.

Apparently you can't read... Nobody followed the police around... And what
does "swapping days" have anything to do with not being able to afford
something? Swapping days isn't going to magically raise a persons pay...

Video equipment, where do you get this stuff, pull it out of your ass??
Nobody has any kind of "video equipment", unless you are talking about a TV
and VCR at home...

Still can't read... Nobody broke ANY law, PERIOD. Nobody followed anybody,
nobody did anything except live a normal, everyday life. Can't comprehend
that or what?

> No need to read beyond this either. Federal law may allow specific
freedoms
> with regards to scanning (or anything else for that matter). State laws

>

State law doesn't restrict anything any further than Federal law with regard
to the "publishing" and "following" circumstances that I have been
discussing.

I'm not sure why you insist on arguing over this crap. I'm just stating
things that happened that were unjust, yet you seem to insist that they
never happened. You, of all people, would have no clue as to how things
transpired, so why argue the opposition? It's people like you that make

topic discussions like this into worthless threads; you think you know everything about everything, yet don't have a clue. You just speculate things, yet spew them forth as if it were fact...

1226. Re: AOR or ICOM?

I have an AR5000+3 and it's a fantastic radio. However, it might be overkill if your primary interest is HF.
With an AOR receiver, it will really receive everywhere it states. Some scanners (like the Alinco DJ-X10 that is more or less deaf above 1000Mhz.) claim to receive somewhere, but the sensitivity is measured in volts or millivolts, but not microvolts as it should be.

I have never owned an Icom (such as the 7100 or the 8500) but they also have a reputation for being nice receivers.

If you have the bucks, go for the 5000+3 non US version. It will give you an AFC with display, synchronous tuning, and built in DTMF display. All nice little perks to have in a rig.

B.

How do these two models compare as far as sensitivity, dynamic range, and intermod rejection? How well does the 898T work in the 225-400 Mhz military aircraft band?

Frank

This is the kind of radio I'm anticipating. Any suggestions where to
buy new - so I have at least a 75% chance of no problems? And does AOR
have a US rep for service if need be?

Thanks.

Yes, that's a possibility. Many EDACS systems (like the one here) are
fully analog voice. The Sheriff's department was going to go digital, but
had too many cases of dropouts. The system is still digital-capable, but I
think they only use it for super-secret ops.

Don't know about you but 1,000 channels is easy to fill.
You must either be lacking imagination,interest, live out in the sticks or
all 3.
First couple are devoted to police,local,state,trunked ect.
No, not every single one is used. Room for expansion.
Then theres a bank with fire/EMS.
That way if a fire truck zooms by, I don't have to sift through all the
police channels to hear its transmissions.
I have a bank dedicated to federal freqs, though in the clear analog fed
transmissions have dropped considerably over the years.
I have a bank with misc crap, tv stations, news feeds fm radio ect.
I have a couple banks devoted to short wave.
Then I have 1 bank dedicated to my local airport, Detroit Metro in my case.
Then theres a couple banks devoted to my local air force base, air show freqs
Blue Angels T-Birds ect.
And there you have it.
I'd rather have 2,000, but 1,000 would do.
I would rather see banks of 50 instead of 100 to make things more organized
and managable.
I don't know what the fixation on 100 is about.

Man your missing a lot of very interesting comms with just 50 channels.
I have over 10,000 channels avilable to me in all my scanners and I
still could use a couple more scanner. And not ONE channel for
Police/Fire stuff.

See the my setup at http://www.MilAirComms.com/shack.html

That's because it lacks alphanumeric's.

>a 1000 channel model would drive me nutz i think.

A 1000 channel scanner would have alphanumeric's for each channel.

>what do ppl do with all of them?

We put in al the local frequencies.

>is there some ulterior (wink-wink, nudge-nudge...) purpose to it all
>such as entering all the new cordless phone freqs or something along
>that line?

Nope. Just all the local channels. I don't live in a large city, I'm
between San Jose and San Francisco, but I could easily fill 1000
channels.

a company called "Les Smith Crystals" does custom cutting and they're
not expensive either. Problem is, I'm not sure if they're still around.
I bought some 6m crystals from them back in the late 90's.

1252. BC296D bunch o questions

Newsgroup: rec.radio.scanner
Date: 2005-03-05 00:42:30 UTC
From: Toywizard <escowizardspam@earthlink.net>
Message-ID: <Wf7Wd.1577$CW2.921@newsread3.news.atl.earthlink.net>
Source record: 14512

Hello all

I just purchased a BC296D and its pretty cool.
I have had scanners for 30 years and when they started going digital it was like lights being turned off. lol

ANyway, has anyone had problems getting the software "Bearcat Supplied" control direct working fine but the upload and downloading of freqs not communicating? I get "Communication error".

Also
It seems to be a real pain to get the sound quality tuned to a reasonable level and do you have to tune every digital freq?
I got a couple pretty good but several others suck.

Also
After you charge the battery 18 hours (unit shut off but plugged in) I get a few hours and the low battery "beep" starts in. Doesn't the unit run under house power without the battery? I run scanners 24-7 and need to be able to pull it out to the truck from time to time.

Thanks in advance for any help.

>>> If you can find someone to pay that much.<<<

Sold it this morning. Now I'm going to have to go to office supply and purchase some kind of padded envelope to mail it in so it isn't damaged, and there is a good chance I'm going to have to buy a package of 4, 5 or 6 envelopes (legal size padded envelopes aren't cheap). Then I have to take it to the post office and that's probably going to take maybe another 4 or 5 bucks. I'll feel lucky if I have 6 or 7 bucks in my pocket after all my running around. My intensions were not to make a profit, I just hated to throw it in the trash if someone might want it. RM~

1259. Kern County

Newsgroup: rec.radio.scanner
Date: 2005-03-05 16:22:37 UTC
From: Burr <pitz2@verizon.net>
Message-ID: <h1lWd.56024$uc.1998@trnddc03>
Source record: 14519

Morning,

Anybody know anything about kern County going to "Trunked"?

They handed out new radios to the Chine Lake FD and said something about a "change"!!!

Here's a little story about the storm last night.

Lighting tore us up yesterday afternoon, most of the south part of town was with out power a few hours and I was out 12 hours.

I took a hit on my transformer on the pole, blew it apart. Nothing happened to my radios or computers. I have my computers on a UPS so I had lots of time to shut down gracefully. My radios run on large 12v batteries so they came out ok, my antennas are grounded and one coil did drop and I had to replace it this morning.

So it worked. Who would have thought that "I" would get hit out of all the houses and antennas around here. I went through the motions of grounding but thinking I would never need it. I use UPS's on my computers, TV and CD players because of "brown outs". I run my radios on 12v batteries to get away from the AC hum and normally recharge when I go to bed.

At the time I got hit I had two PC laptops going and one "Big Mac", the Sat 800 and the BC 895. I ran the radios from 5:30am until I went to bed, I have two of the biggest batteries that Cosco has, I replaced the D50's that I used for years and used the Cosco batteries because of price.

When the power came on about 4am I got up and checked to be sure everything was charging then went back to bed. Something to remember, UPS's are only good for 2 years. I sell a UPS with every system I install and I always push for them to change them out in two years. I have also found it is good to "work" the batteries, I pull the ones down in my motor home every few months, I "recharge" my car batteries every few months to keep them toped off, alternators do not top batteries off, they only replace what is used, """Maybe"""!!!!

OK, here's my report on the power outages. Pick it apart if you want but it works.

Au contraire. The Sony ICF-SW7600GR would be a great choice, and it goes for $130 or thereabouts. It's a well respected portable in the SW community, but it may be a *little* big for "walking around" (it's certainly not pocket size, but well within the range of "portable").

What's the Radio Shack model he has now?

It sounds like data to me, but I couldn't tell you what format. I also
noticed either a CTCSS tone or a bad 60 Hz hum problem in your audio setup.

probably AC 60hz hum, this yaesu vx5r wideband receiver is bunk. oh well, what do you expect when you pack everything from a barometer/thermometer to a frequency analyzer/voltmeter/scanner/corkscrew into something the size of a pack of smokes.

1266. Re: is this data or just interference?

Actually, if it's AC hum, it's your audio cabling setup to your PC (ground problem), not the radio. It might also be a CTCSS tone...I don't have a calibrated ear, so I'm not sure what frequency it was. The VX-5 is a solid radio (I own two of 'em), but the I agree that wideband RX features probably unnecessarily compromise the design.

repairs.<<<

It's been a long time (really long time), but I sent a scanner to them and
it came back working just fine. Don't know how they do it now but they used
to have a flat rate on each item and would tell you over the phone how much
$ before you even sent the item in. Don't recall what the flat rate was on
that particular scanner was but it was reasonable at the time. RM~

1269. What is there to monitor on 2.4 GHz band?

Newsgroup: rec.radio.scanner
Date: 2005-03-06 02:22:59 UTC
From: kc7jfv@hotmail.com
Message-ID: <781c67d2.0503051822.403d8aaa@posting.google.com>
Source record: 14529

With all the WiFi equipments operating on this range, my area is ripe with signals on this band. I understand there is only data traffic operating on FSK mode. Would be nice to monitor the band regardless even if all I could see is just what people are browsing. LOL.

Any idea? And what type of scanner/receiver would I need? Thanks.

MacPherson KS has an EDACS system. They have 5 channels and they can
all be monitored in the clear with a non-trunking scanner.

My PRO-2067 follows them in trunked mode, so I assume there are other
scanners that do it as well.

Greetings Jim! I understand the desire to be able to talk back to the people you hear, but you do realize that is illegal. We had a crazy ham in this neck of the woods who converted his 2 meter to the county sheriffs department freq and ended up in jail for about 2 years for malicious interference. Needless to say he is no longer a ham either.

I don't know what I would want as the perfect scanner as everything is changing so fast. I don't even have a trunked scanner here yet, but only the highway patrol is trunked now. I would love to have a trunked scanner with a blue backlite screen. 200 memories is enough for me. Why not get your ham licence and do some chatting on the legal ham freqs? I will leave the emergency freqs to those who need to be on them. Have a great weekend! Jon.

1274. BC296D power life?

Does anyone else have the BC296D and use it plugged into house current?

Mine, after recharging 12-18 hours runs (now its still plugged into house current) for about 4 hours and finally dies from low battery. I thought as long as its plugged into house current you could run indefinitely?

Scott L Golden

>
> what do ppl do with all of them?

Put different kinds of things in each of the banks.
My old AR1500 has 10 banks of 100 frequencies each.

An example. In the last few days, Melbourne (Aus)
has hosted a Formula 1 grand prix:

I had a bank of about 90 possible driver/team frequencies.
Another had a smaller set of known confirmed frequencies.
Another had media frequencies.
Another had the local V8 supercar driver frequencies.
Another had track (eg race control / cranes /trucks) frequencies.
Another had air frequencies (eg the aerobatic Roulettes)
Another had a single frequency for the local TV
Another had a single frequency for a driver that I wanted
to keep an eye on, but interference kept me from putting
it in with the main bunch.

You get the idea. With the sets separated in this way, its
a single button push to change the type of thing I'm listening
to at any given moment.
If they were just in 1 huge pool of 1000, then it'd be useless,
but they arent isnt, so it isnt. ;)

I have an Algreo DFjr doppler direction finder for sale. The unit is in excellent condition and has antennas cut for 2 meters. It also includes the mulitport adapter and manual. This is a very cool device that also interfaces with GPS and APRS programs such as the PocketAPRS.It is great for foxhunting or finding interference. Asking $400 including shipping

Please email directly if interested.

1282. Icom H16 - different versions?

Newsgroup: rec.radio.scanner
Date: 2005-03-06 22:49:51 UTC
From: Tee <fremontguy@gmail.com>
Message-ID: <1110149391.105706.159520@z14g2000cwz.googlegroups.com>
Source record: 14542

I bought a used H16 to monitor the state patrol here in WA State.
They're on 155MHz. It turns out that the H16 has two "versions" - one
for each half of the band? Anyway, it looks like I have the version
that's covers 144, but not up to 155.

Is there any way to set the band range? I don't need the entire band,
but want to be able to program the upper half...

Thanks for any suggestions..

1283. IRC radio monitoring

Newsgroup: rec.radio.scanner
Date: 2005-03-06 23:21:47 UTC
From: Barnard Peters <one@two.com>
Message-ID: <68udnfeXHr4XDbbfRVn-qw@comcast.com>
Source record: 14543
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.pirate.radio,alt.radio.pirate,alt.radio.scanner

Though radio communications monitoring is fun and interesting
all by itself, there is more fun to be had participating in live
interactive radio monitoring with colleagues from around the world who
share the same interest. Having dozens of ears scanning the bands really
adds to the excitement. Having more people on-line means having more
ears on the bands. This posting is an effort to add more people to
zirc.org #monitor

Entry level as well as experienced listeners are welcome to join.

Read more info about this at at: http://s91586483.onlinehome.us/monitor/

To connect to IRC, you will need an IRC client. Mozzila and netscape
have one built in or there are many you can download and install. You
will need to connect to irc.zirc.org or pick a server from the website
at zirc.org. To connect, type "/server irc.zirc.org" and once connected
type "/join #monitor". There is a web based client at
http://www.zirc.org/chat/

Once logged on, simply start posting what you hear or just be a
fly-on-the-wall and watch what other people post and follow along on
your radio!

The H16 can cover a window of about 20-25 megacycles depending on the particular radio. If the PLL goes out of lock the readouts will flash and you'll know you're pushing the limits for that particular radio. If the readouts aren't flashing, something else may be going on.

It is possible to move that window up or down some.

Even a low split radio should cover 155 easily though. It's when you get into the 170s things start to get tricky.

Someone intimately familiar with the radio can retune the PLL and move the window up some. I haven't done it in prob 10 years, and couldn't put it into words. It's not difficult, bur you need to know the radio.

I believe the PA module may be different between splits. I know it is on UHF. Don't remember if it was on VHF. If you're only receiving, however, you don't care.

So your answer is: yes, it can be done. However I don't remember how.

I have a Uniden BC890XLT that seems to work normally, but receives nothing.
A Google search comes up with a similar problem to mine, but I don't see a
solution.
There's an IC, a Sharp IR3MO3A which is running super hot. It's switching
regulator IC, but I'm not sure what its purpose is, since most of the set
runs from the 5 and 8v linear regulators in the power supply.
Anyone had any experience with this? Is there a schematic anywhere
available for this?

Thanks,
John

Firefox has "chatzilla" for IRC. I made it to the chat room with only one hitch. Namely, the chat room doesn't appear in the list of available chat rooms. Otherwise, telling chatzilla to go to #monitor worked just fine.

I haven't use #monitor for at least 7 years. It was on a different server back then. There isn't a whole lot of chat, which is good. Once in a while someone types a frequency for a numbers station, or notes when GHFS is active.

Try a 0.1 uF Tantalum cap on the center conductor. IOW, interrupt the
center conducter and install the cap inline between the scanner and sound
card. Also, I would strongly suggest you install a 1:1 isolation transformer
between the cap and scanner.

New XP2500A
The World's #1 Digital Satellite Television
Receiver Descrambler is Now Available to you!!!!!

Order Yours at: http://www.fta9000.3322.org

No Monthly Subscription Charges of ANY Sort!
No Service Contracts of ANY Sort!
No Telephone Connections of ANY Sort!!!!
Does NOT use ANY Sort of Satellite Access Card
The World's Number One "Cardless" Satellite Receiver!!!!

A NEW Product for the NEW Year of 2005
Our New XP2500A Digital Satellite Television Receiver Descrambler allows you to view at your convenience the following with the USA, Canada, Cuba, Bahamas, Jamaica, Virgin Islands and Mexico:

View Over 600+ Digital Television Stations FREE! (Everything!)
View Over 200+ Digital Commercial Free Music Stations FREE !(all categories)
View Over 40 Pay-Per-View Movies Channels FREE!
View 8 HBO's/5 Cinemax's/10 Showtime's/8 Starz, etc. FREE!
View Seven Adult Channels FREE FREE FREE • 24 Hours A Day (Non-Stop Action)!
Boxing/Football/Soccer/Baseball/Basketball • ALL Sports Packages FREE (With No Black Outs)!
Receive Home-Town Local Broadcast Television Stations from 4 Time Zones
Use this New Television Descrambler at Home/Office/Truck/RV etc.
Works In the USA and Canada • plus ALL of North and South America and Territories!
Works on: Nagravision, Seca, Viaccess #1 and #2, Irdeto One and Betacrypt Digital Satellite Signals!!!!

NOTE TO AUSTRAILIANS: We get many request about the Australia•s "Foxtel Channel". Our New XP2500A Receiver works nearly ANY where in the world - but it will NOT receive "Australia•s FOXTEL Broadcast Channel" as of yet.....they use Irdeto #2 a Decoding System.....so wait patiently - our Descrambling Technicians are working HARD on this one, to brake the code.
International Customers.

Messages, questions and comments regarding all forms of Military Communications are welcome here. This includes HF, VHF, UHF, SatCom, anything Military related is considered on topic.

This is one of the fastest growing groups dedicated to monitoring Military communications. Started about a 1 1/2 years ago we have over 720 members and many posted messages and files. There are daily logs being posted, answers to questions, and good conversation relating to monitoring military communications. Unlike many military monitoring groups whoï¿½s posting activity is declining the MilAirCommsChat group is growing.

This group is for old timers and new comers to the hobby. I will not tolerate anyone making rude comments towards newbies to our hobby. Just remember ALL you were newbies at one time.

For more information on this group or to join you can go here:

it's not just GE or it's not just EDACS that is the problem.
The problem is when they use Provoice, I don't know of anyone using
the Provoice technology in a scanner right now. I expect eventually
they will, but since it's protected by patent and copyright law, I do
not know anyone that can decode it.

>
> Kern County is not going trunked.
They are switching county fire to their old VHF county freqs.
The sheriff channels will remain UHF but with different designations for
the areas of the county etc...
I spoke with a county radio tech about the system changes and he said
that for sure they are not going trunking because it costs too much.
The new radio plan for county fire/sheriff and other county services is
not in use yet. Motorola (the company that the county used to rebuild
the system) is still working out audio bugs and intermod problems with
the new repeaters. If you listen to the VHF fire freqs and UHF
sheriff/county services freqs you can hear Motorola doing "4 count"
testing on sunny days. The tech said that the bad weather has stalled
Motorola's progress because they are having trouble getting to some of
the snowed out repeater sites. The new systems will be much better.
Better audio and stronger signal. The tech said that they turned up the
power considerably and have added many repeaters to fill in areas. How
this info helped. Here is the webpage for the countys radio system plans
etc: http://www.co.kern.ca.us/gsd/communications/sysupgrade.asp
BTW you can get the new freqs and channel designations from the Scanner
Stuff Southern California Frequency Directory. If you still need them
let me know.

Got me scratching my head on that one too! In fact I've deleted a few
posts over the years which had racist and religous remarks in them.

The group is for discusing Military Scanner and anything related. It is
not for racist and/or religous discussions.

You could buy a rigblaster. They do all the level interfacing for you. Or,
you could buy the part from Radio Shack. P/N is 272-1434 $1.59

Hi there all, and '73

I've been working on an on-line forum for people who enjoy short-wave listening, general recieving, scanning, Ham, police/fire etc. etc.

The forum is not completely ready, but fully functional and updated every day. Complete with a couple of nice skins etc. Feel free to drop in and make a post.

Visit the forum at: www.globallistening.tk

Thanks for your time.

Shaggy, forum Admin.

Hi,

Do you know what is the General WFM stereo radio service in Japan ?

What its range and what channel spacing that they use ?

Is it as in europe 50Khz or as America 200Khz ??

Tnx, adid

76-90 MHz or more exactly 76.1-89.9 MHz with 100 KHz spacing.

radio shack in the u.s. also has a 1:1 transformer wired up for stereo's, you would only need to use one side of it for mono.

part number 270-054

>
>
John, the IR3MO3A is IC 12.

Program 162.400 and the voltages should measure;

Pin 1 - 12.85
Pin 2 - 0
Pin 3 - 0.54
Pin 4 - 0
Pin 5 - 1.27
Pin 6 - 12.85
Pin 7 - 12.85
Pin 8 - 12.85

There is a capacitor to ground off pins 1 and 6 that may have become leaky.
C63 and C65 are both located near the I.C.
Pin 6 provides the input voltage to I.C. 7, an L78MO5CV. If this regulator,
or some of its circuitry, is shorted or leaky this drain may be causing the
excess heat on IC 12.

Hope this helps you. Keep us posted!

Mac

Correction -- actually the 12.85 volts on pin 6 of IC12 comes from the B+ source..(via the power switch on the volume control).....and that line also feeds IC 7.
Still, I would look at the two caps right off IC12. Do you have audio and squelch noise?

Mac

ID Tracker has been updated.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Changes since V3.5.0:

- Added BC3300 support.
- Added "Spectrum View".
- Added "tool tips" to bank indicators.
- Audio PlayBack is now available during tracking.
- Added additional checks to reduce false hits.
- Enhanced BC245 support.
- Corrected issue with IDs containing commas (,) in the description.

Source record: 14480

MAKING MONEY I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups and came across an

article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6

names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at

least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. WellGUESS WHAT!!... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over

$10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the!! Let me tell you how this works and most importantly,

why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!

It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the

money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the

U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses: #1)Dan Warner 2812
W. 1st. St. Duluth, MN 55806 #2) Karen Green 50 Gillinder Street Rockhampton Qld Australia 4700 #3) Ryan Lake 41130 Congerbay Dr Harrison Twp, MI 48045 #4) Zac Inchley unit 82/ 128 Benowa rd Southport

Qld Australia 4215 #5) Carl Baker 2267 N. Kedzie 1st floor Chicago, Illinois 60647 #6) Jason Otto 600 s. 1st st. Waterford, WI 53185
STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc.) and add

YOUR Name as number 6 on the list. STEP 3: Change anything you need to,

but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more

you post, the more money you make! This is perfectly legal! If you have

any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal laws. Keep

a copy of these steps for yourself and, whenever you need money, you can use it again, and again. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the

notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded

and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches

the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning

of this letter and drag your cursor to the bottom of this document, and

select 'copy' from the edit menu. This will copy the entire letter into

the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in

the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to

the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. ** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a verylow example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of

the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2

and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What

are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups

everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual

internet. Remember, play FAIRLY and HONESTLY PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at

it this way. If you are of integrity, the program will continue and the

money that so many others have received will come your way

1325. Trunktracker Question

Newsgroup: rec.radio.scanner
Date: 2005-03-12 07:37:52 UTC
From: P122504@time.com
Message-ID: <6s5531t6ptm851fmllt4hbh02jnnnnhjt8@4ax.com>
Source record: 14485

I am trying to setup my Bearcat BC895XLT scanner for trunk tracking in Nashville.

For Police and Fire Dept, I find a large number of five digit frequencies, from 10032 to 22064. When I try to program them into my scanner, I get an error.

Can anyone tell me if these are frequencies that are part of a trunked bank, and if so, how do I find the bank that is related to them so that I can enter them into my scanner?

I've found what I think are trunked frequencies, such as 856.4375, 857.4375, 859.4375, but I can't find their four digit data frequency.

Thanks in advance for any help provided.

Getting ready to put up a Discone antenna (Sky Scan DX V1300) and am looking for further suggestions and opinions regarding what cable to run. I am not sure exactly how far it will be. To estimate it though, I would say between 50 and 75 feet to where I plan on bring it into the house to the scanner. (BC 796D). Any input will be appreciated...
TIA

1346. SERIOUS MONEY OPPORTUNITY-$5 INVESTMENT-HIGH RESPONSE RATE-QUICK RETURNS

Newsgroup: rec.radio.scanner
Date: 2005-03-14 21:21:51 UTC
From: feedbackzz@yahoo.com
Message-ID: <1110835311.356606.7990@o13g2000cwo.googlegroups.com>
Source record: 14357

Follow the directions below and you could
have $5000 in your PayPal account in 2 weeks.
There is a very high response rate in this
program because of its low investment, high
yields, and quick return. If you are a skeptic
and doubt that the program will work, I urge
you to give it a try anyway! It REALLY WORKS-
that is why so many thousands are involved in
programs like it. Don't miss this chance.

If you achieve only moderate success, your
PayPal account will still have several hundred
dollars in it within the next couple weeks.
If you actively promote the program, you could
soon have $8,000 in your PayPal account.

SIMPLE: All you need is $5 and a free PayPal
account. Pay $5 to one person.

SECURE: PayPal (BBB member) handles all
transactions. No one sees your bank or credit
card information.

LEGAL: See Title 18, Section 1302 and 1341,
US Postal and Lottery Laws.
The details of this business make it legitimate.
You are using the Internet to advertise your
business opportunity. You have a mail order
business that collects email addresses from
people interested in home-based online business.
You provide a service-mailing list membership-
in return for a small fee. Treat your mailing
list as a business. Keep accurate records,
declare your income, and pay income tax on it.

INSTRUCTIONS

STEP 1: COPY and PASTE this letter onto a
blank notepad file. SAVE as a TEXT FILE.
Keep it for the next time you need the
program.

STEP 2: Get a free PayPal account
(5 minutes setup time) at www.paypal.com.
Register for a PREMIER account (not a

PERSONAL) so that others can send money
to your account.

STEP 3: Using your PayPal account, send $5
(US DOLLARS) to the email address (PayPal
account) in position #1 of the list below.
PayPal will ask for a payment type-select
SERVICE. In the SUBJECT area, enter
"Please add me to your mailing list"
(this is very important). If you prefer
that your email address not be given to
other mailing list businesses, enter
"Please add me ONLY to your mailing list"
in the SUBJECT area. In order to send
money, you can deposit $5 into your PayPal
account with your own credit card, use
your bank account, or register for the
PayPal credit card.

IMPORTANT: IN ORDER FOR YOUR BUSINESS
TO WORK, YOU MUST BE HONEST AND SEND $5.
The mailing list business remains successful
due to the honesty and integrity of those
involved. $5 is a very small investment,
especially when you are about to receive
many times that much! If we are all honest,
we will all make money.

STEP 4: After you send your $5, remove the
address from position #1 of the list below.
Put the address in position #2 into position
#1. Put your own email address (PayPal
account) in position #2. Some engines will
automatically hide part of an email address
when the letter is posted in a newsgroup.
It may look like this:
yournam...@wherever.com

To avoid this complication, enter your
email address using 2 separate lines,
like this:

2) yourname (press ENTER on your keypad)
@wherever.com

(If you ever encounter the dots, click on
SHOW OPTIONS at the top of the letter, then
click on REPLY. Scroll down through the
original letter to find the full addresses.)

Both people on your list have already bought
mailing list memberships for $5! The program

is working! Note: If you put your name in position #1, you will not receive money from the hundreds that other members find.

CURRENT PAYPAL ACCOUNTS:

1) cwhatton22
@charter.net

2) feedbackzz
@yahoo.com

STEP 5: COPY and PASTE this letter (with your address in position #2) in emails to at least 60 newsgroups, chat sites, discussions, message boards, etc. It takes less than a minute to post the letter. The more you post, the more money you can make. People will see the letter heading as they scroll through the list of postings in a particular group. PASTE the heading below into the subject area of your email (you can also write your own heading):

SERIOUS MONEY OPPORTUNITY-
$5 INVESTMENT-HIGH RESPONSE RATE-
QUICK RETURNS

Use the search engines (Internet Explorer, yahoo.com, google.com, altavista.com, excite.com) to find sites. Search for moneymaking forums, moneymaking message board, money chat, employment message board, business message board, business discussions, etc. You can create your own free webpage (try webspawner.com, cmlb.net), then post links to your site. Try posting a notice on community and college bulletin boards to direct people to your webpage.

THIS BUSINESS WORKS

When your name reaches position #1 (usually in less than a week) it will be your turn to receive $5 deposits. If you personally find 20 interested people, and they each find 20, you make $2000. If you find 40 people, and they each find 20, you make $4000. Remember that the response rate is very high. Since there are only 2 names on the list, you can expect 80% of your profits within 2 weeks.

Participants who actively promote their mailing list average between $5,000 and $8,000 and receive the funds within 3 weeks.

Relieve your financial stress NOW!
Become a part of the mail order business and help people to help people.
This program is about helping each other!

Hi,
Is there a way to reset the Pro-2006 scannerfrequencies? I lost the
owners manual a long time ago.
Thank you,
Mike

To clear all the memories, be sure the scanner is turned on and:

1. Press and hold [CLEAR].

2. Using a pointed object, press and release the restart switch.

3. After confirming that the display goes blank, release [CLEAR].

I just got my new CCrane catalog today. As I flipped through it, I saw some cool stuff that would be fun to have.

Then I noticed the new BC92XLT handheld scanner from Uniden. Since I had just bought one last month, I glanced at CCrane's price: $159.95! I got mine at my local Wal-Mart for $99.95!

Nothing against the CCrane people, but the $60 difference is a lot of money to me, especially when Wal-Mart offers the convenience of 24-hour shopping, no waiting, and a very liberal return policy.

So to anyone who is thinking about ordering a new BC92XLT from CCrane, know that a $60 savings is as close as your neighborhood Wal-Mart.

Looks to be the same as a Radio Shack PRO-83. Bought mine for $60 during
Radio Shack's day after Thanksgiving sale.

Well, I finally found the Nashville Metro system type:

Motorola ASTRO Smartzone Digital.

So I guess that makes my BC895XLT completely obsolete in this area.
Also, it appears that there are only a couple of $500 scanners that
will monitor this system.

I doubt there is a lot of monitoring going on in the Nashville Metro
area.

For sure I agree with you about that issue......I bought my Radio Shack Pro 83 (basically the same as the BC92XLT) with the same features and all.....I bought my scanner for $83 on ebay brand new.....and in Radio Shack they were $120 on the shelf.......saved myself a little bit there too.....good ole ebay....LOL Just thought I would throw my 2 cents worth in there.......

I just purchased an old service manual for a Regency ACT-R 10 H/L/U scanner. Unfortunately it is missing the updated schematic in the addendum section. It is in:

Section 5 SERVICE MANUAL ADDENDUM -

Sub-section 5 - 5 - 6 Schematic

Would someone have this manual, and be willing to scan this page for me?

Thanks very much!

Don't worry about impedance, a 1.5(75 ohm) to 1(50 ohm) match is fine,
even if transmitting, and on reception, it's totally meaningless. RG6 is
a lot easier to work with, and is cheaper than all but the crappiest RG8
type too. There are no real drawbacks to using it...

I have both, genuine Belden 9913, the solid stuff, a run of stranded too, along with 3 or 4 runs of RG6. I could switch them continuously, and you could not tell the difference, except maybe on 800+ MHZ, and I really doubt even there it would be enough to justify the cost and hassle of using it. I have it for transmitting, something RG6 isn't really equipped to do well.

I would rather worry about/spend money on something that actually affects reception..

About seven years ago I bought one of those ccrane Sangean radios that Art Bell and George Noory tout so much about.At the same time I bought one of those round antennas with the knob in the middle of the antenna,I paid about $57.00 for that antenna.I was hoping with that antenna and that radio I could pick up KVOO Tulsa,Oklahoma better than my old beat up radios could.At that time,KVOO was broadcasting on the AM band.That radio with that antenna did not pick up anything any better than my other old radios did.I sent it back to ccrane company (I got a new ccrane catalog yesterday too,it's that radio on the back cover of the ccrane catalog) and I bought a Sangean ATS-909 shortwave radio.I also own some old shortwave radios and that radio did not pick up anything any better than my old shortwave radios either.I suppose ccrane company might still have the data in their computers or on paper of when I bought those two radios and that antenna and when I sent them back to ccrane for my refunds.Over priced and over rated JUNK! ccrane company sells,in my opinion! Are y'all two KOOKS! listening,Art Bell and George Noory and you too,Bob Crane? Over rated and Over priced JUNK! Bob Crane and company sells! Fool me once,shame on me,Fool me twice,shame on you! I will Never buy anything ccrane company sells again or anything Art Bell and George Noory touts about again either.

Just got this beast in today.
Initial impressions - One helluva scanner.
My unit appears to be defective in that it turns itself off and on seemingly radomly.
Would much rather have a mechanical on/off switch than the little push button thing.
Is a beast to program - Spent an hour or so just figuring out how to enter a single freq, and though I have it set in English mode, alot of the menu and LCD display are still in Jap.
Yes, it is the full functioned Jap version.
It appears it will be a major project to program 100's of freqs.

Haven't had a chance to try the flash tune, but the freq counter was registering all my various wireless devices, though it didn't register my cell phone or cordless [suppose they are a bit out of its range].
One major turnoff is its mega annoying noisy squelch tail - A shocking ommision in a receiver of this class.
Otherwise, the audio sounds great and is quite loud, though once again it takes a bit of work even to turn up/down the volume or squelch, requiring both hands to do.

Was wondering if anyone suceeded in making a serial port/2.5 mini patch cable to enable it to be programmed via computer.
I dl'ed the software, and it looks pretty damn good.
I can see where this will be a major headache saver, and will plop down another $40 to get this cable if I can't make one myself.
My old digital camera uses a cable that connects to the serial port, and terminates in a 2.5, just like the 2000 needs, but it didn't work.
I suppose Alinco made some kind of proprietary pinout scheme to force people to pay a ridiculous price to buy their 'special' cable.

The USA version DJ-X2000T I tested (s/n T000530) in June 2001 Monitoring Times had the same long squelch tail. I measured it to be 110 milliseconds.

Hi,
The old '2006 is wearing out. Back light display is shot etc.
Are there any base type scanners comparable to this scanner?
I live in a rural area and like alpha tagging. I have a PRO-93
handheld that does a good job.
Also, is there a good place to buy scanners and electronic equipment
in the NE
PA/Pocono Mts. area?
Thanks,
Mike

I take it what you are after is being able to pick up cell phones? I have seen ads for people that "claim" they can un block the blocked channels, but I would be dubious about sending them my money. If you try I would ONLY deal with someone who will accept a credit card. You need to remember before you spend money on this that you "may" hear next to nothing if you do manage to un block the cell frequencies. There is very little left on the old analog network as so much has gone digital which you can't pick up. Even with the old scanners that would pick up analog cell it was often hit and miss trying to follow a call, and range was VERY limited.

Why not just buy a Pro 95 or one of the Uniden hand held trunking scanners
that do what you want? You can buy rechargeable batteries, and or an AC
adapter so you can use it all you want at home, and take it with you if you
want.

1378. " BIG BUCKS" WITH ONLY $6.00 INVESTMENT "NO BULL"!!!!

Newsgroup: rec.radio.scanner
Date: 2005-03-16 18:12:05 UTC
From: bscruggins2000@yahoo.com
Message-ID: <1110996725.228440.24620@f14g2000cwb.googlegroups.com>
Source record: 14389

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam,but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it`s still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it`s still coming in rapidly. It`s certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (Print it out or download it.) Follow the simple directions and watch the money come in! It`s easy. It`s legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are followed exactly, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions PERCISELY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it`s a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the

mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper; PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

Mailing Addresses

1. P. FREY, 4577 W. PONDS CIR, LITTLETON, CO 80123
2. E. DE LEON, 14014 Rosecrest, Houston,TX 77045
3. A. Lopez, 810 Ave.J, South Houston TX 77587
4. L. Pacheco, 812 Ave.J, South Houston, TX 77587
5. K. Bat, 9335 Alcona Street, Lanham, MD 20706
6. B. Scruggins, P.O. Box 845 Port Barre, LA 70577

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed,

six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you`re in business!
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select `copy` from the edit menu. This will copy the entire letter into the computer`s memory.

Step 2) Open a blank `notepad` file and place your cursor at the top of the blank page. From the `edit` menu select `paste`. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you`ll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Just example you log on any search engine like, yahoo.com,google.com, altavista.com,excite.com then you search with this subject millionaire message board? or money making message
board? or employment message board? or money making discussions? or money making forum? or business message board? etc. You will find thousand & thousand message board. Click one by one then you will find the option post a new message.
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You`re done with your first one! Congratulations...THAT`S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That`s it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now

those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.

Remember: Play FAIRLY and HONESTLY and this will really work.

You're mostly right, except it is not encryption, but it might as well be. We'll have to wait until some geek at uniden figures the format out. If it is encrypted, it won't be for long, there's a lot of people that can handle that. I think the main prob tho is proprietary...

I know Harrison Cty MS uses edacs both with provoice (4 cities + county and ambulance) and all the fire and rescue is analog all on the same edac system. I frequently hear the police dispatchers when they talk to the fire department and I have heard rescue talking to ambulance, but they were all analog when I heard them. The county and city maintenance workers are analog on the same system also. (water, sewer, maint, etc)

Yaesu FRG-9600 VHF/UHF communications receiver, complete with original manual & box. Covers 60-905MHz. 100 memory channels, but will need internal battery replacement to retain memory channels if the radio is unplugged. Installed is a tuneable speech-inversion descrambler, of course only to be used in legally monitoring/trouble-shooting your own speech-inversion transmissions, perhaps those made on your FRS radio.

$380 includes insured UPS shipping within the USA. If you're interested, have questions, or would like me to email you images of my FRG-9600, contact me via email.

Hi,
I have a RS Pro-93 scanner. I don't see much of a write up on it on
the web other than it had been replaced by the Pro-95 model.
Any shortcomings anyone has had with the PRO-93? Anyone like the
PRO-93?
How does the Pro-93 compare to the Uniden 246XLT?
Thanks,
Mike McM.

I have one and love it. Same scanner as the pro95 except the 95 has more
channels.

1390. EBAY SQUASHED MY LISTING

Newsgroup: rec.radio.scanner
Date: 2005-03-18 21:40:45 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <xVH_d.35824$534.20578@twister.nyc.rr.com>
Source record: 14401
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

eBay, an idea that started out with good intentions, to serve the internet community has gone the way of so many other internet services of it's type. They think they're GOD, (along with many on these groups who think they are almost God, or NEWGROUP POLICE at the very least).

eBay is now only concerned with MILKING the very MOST money they can from it's customers. Try to call them on the phone? Are you kidding? Send them an e-mail? Good luck. They don't care, and why should they, they're the only game in town. U.S. Capitalism at it's best, but more about THAT later...

I recently put a UNIDEN 296D and 796D scanners on eBay for sale, and also made FA posts on these groups. Luckily, the 296D sold early with BUY IT NOW, and for some strange reason, the 796D was bid to a price past what the original BUY IT NOW pricing was. Yep, there's that good ole US capitalsim at work again. No one twists arms to bid that high, and as far as I know, ther is NO mechanism on eBay to STOP a bidder from bidding an item TOO HIGH.

The auction was to end today. I would have had a decent return for my scanner, and the buyer would have a brand new, in box, never opened, never used scanner.

But yesterday eBay replaced my auction with this notice......

This listing (5759983900) has been removed by eBay or is no longer available. Please make sure that you've entered the item number correctly. If the item was removed by eBay, please consider this transaction canceled

I DID NOT CANCEL THE AUCTION.

eBay offered NO explanation as to why they removed this auction. As far as I know, the 796D is NOT banned for sale on eBay. They cancel your auction, but they DO NOT refund your listing fee. They send you NO e-mail explaining the removal. NONE. I sent them an inquiry, but so far no response. This is NO WAY to do business.

I am now out the listing fees, and the financial reward of the winning bid. eBay, or SOMEONE hurt me bad in this, for no legitimate reason....

Other then what I THINK happened.

Some NO LIFE, MISERABLE lurker in these groups, basically a RAT , SCUMBAG dropped a dime on my newsgroup listings to eBay, and they removed my auction. If you check my newsgroup post, and it's responses,

you can formulate some potential suspects for yourself.

Day in and day out these newsgroups are LOADED with nonsensical SPAM, and horeshit to beat the band, and nothing is ever done about it. Because someone was basically JEALOUS that my auction would bring a few bucks more then THEY thought it was worth, they act like a RAT BASTARD Newsgroup Cops and cause me harm.

Well folks, the gloves are off. I will offer the scanner on a straight FOR SALE basis 80 ZILLION times on these groups. Since it is unfortunately the only game in town, if I have to, I will re-post it on eBay, but will follow eBay's rules and NOT post any FA on the newsgroups, not even rec.radio.swap.

However, rest assured, that I will make a second vocation of reporting ANY and ALL FA eBay posts I find to eBay ad nauseum. Even those on the rec.swap group. eBay rules DO NOT allow posts even on a swap or for sale newsgroup. So, all you fellow hobbyists who get censored or DUMPED by eBay like I did, thank your fellow ASSHOLE lurker for it.

Yes, this was LONG and I am PISSED. Thanks for reading.

Dan

1391. FS : UNIDEN BC796D digital trunking mobile/base scanner NIB!

I am selling a brand new, in the box, never used UNIDEN BC796D mobile/ base scanner. Of course, as such it includes manual and all accessories. This is latest digital trunking scanner offering from Uniden which is fully APCO 25 digital capable with the digital card already installed and on board.

CHeck my eBay feedback under OFFDAN.

I am asking $475.00 which will also include UPS ground, insured shippng.

I will accept a US Postal money order, or personal check. Personal check will require my delaying the shipment until the check clears.

I will also accept PAYPAL, but at this price, will ask for an extra $10.00 to cover the PAYPAL fee.

E-Mail only if interested.

Dan

I have bought and sold much on Ebay. I have had them cancel an auction for violation of some rule of theirs, but they always e-mailed me with the reason. It was always something I did because I did not read the entire rules. They also always refunded my "insertion fee". They are certainly a big company, and you can "take them or leave them" I'm sure they would not care. How do you pay them? If you do as everyone should, pay with a credit card you can challenge the charge. Over the years I have had EXCELLENT service from both Master Card and Discover when someone tried to burn me both on line and in person.
If, and it's a BIG if, this really happened like you "claim", it sounds like it was some kind of mistake. Does anyone here know if Ebay has some rule about posting a link to their auctions in Usenet?
If people really did bid on your scanner you can just e-mail them and make a deal to sell them the scanner.

You're hardly blameless in all this, but I do agree with you on one
point... eBay should provide a legitimate reason each and every time it
ends an auction.

Listing an item FA: in a newsgroup is an ebay violation? OK it is but why? How does attracting more potential buyers and getting a higher FAVF bad for ebay?

As for not reimbursing a listing fee they can get away with that because of all the disclaimers in that you willingly posted something was in violation and it was up taking HD space, not their fault you broke the rules, you got what you paid for a listing. To reimburse you wouldn't be cost effective and they don't care you never use them again, they got 10 new suckers coming on line every second.

Brilliant Mace, just brilliant.

Now the newsgroups will be free of SPAM, there will be no war, we will all win the lottery, and radio hobbyists will stop being weasels and rats, all thanks to eBay...

Well, I certainly will be doing my part to clear the groups of spammers.

Dan

They don't give reasons for the "reasoning" , they don't have to. They
are GOD,
Is it because its considered spam? This is the first I have heard of
it.

It's the first you've heard of it beacuse it's been going on since eBay
was formed here on the newsgroups and no one cared or made a stink about
it. Go to rec.radio.swap right now and you will see at least 6 FA
postings. Are those auctions being yanked? Are they being reported to
eBay? DO you really thinks eBay gives a Rat's Ass about it until
someone reports it?

Someone dimed me out, plain and simple, and where I'm from, that's a
RAT. Not at al something to be proud of.
So WTB and FS
> are ok? But not FA? Am I copying that right?

I honestly don't know. This has been going around and around on the
newsgroups for years. Are Viagra ads OK? Are off topic political posts
in a shortwave group OK? and on and on?

I guess they are until Dan Conti posts a few FA posts during the year
and I am being reported to eBay, and now threatened to be reported to my
ISP.

Amazing.

You are right. I fully admit posting here on the groups.

However, it's a hard pill to swallow to have fellow hobbyists hurt you
in this way, when I meant no harm to anyone.

Over the years many hobbyists have benefiited from the equipment I've
sold. No one is getting rich.

I think if we are going to clean up the newsgroups, then Let's do it for
all, not just one because someone got their panties twisted seeing an
item bid up for more then it should have. That's just not fair.

but I do agree with you on one
> point... eBay should provide a legitimate reason each and every time it
> ends an auction.

They should, but for some reason in this case, they have not.

If and when I ever get a response, I will post it here. But I suspect
it is as I said, someone on these groups did me in.

So much for the amateur radio fraternity.

Dan

Click this link and you will see that my auction was in fact dumped.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5759983900&ssPageName=ADME:B:LC:US:1

>Does anyone here know if Ebay has some
> rule about posting a link to their auctions in Usenet?

Yes, you are not suppsed to post anything related to an eBay auction
ANYWHERE outside of eBay in any form or advertisement. This may be to
protect them from charges of SPAM from their company, and also for them
to maintain an absolute monopoly and control over any content or ads
from their service.

> If people really did bid on your scanner you can just e-mail them and make
> a deal to sell them the scanner.

Yes, they REALLY did. And guess what? I can't e-mail them because the
auction is GONE and I dont' have the information.

And you know what? Doing so would violate YET ANOTHER eBay rule. If
you click the link above and read, you will see what it is.

I'd be interested in seeing that particular rule.... if you would please provide a link. It doesn't seem logical to me that EBay would prohibit the advertising of their own auction on other sites, when such advertising can only further EBay's chance of increased profits through the EBay sale going as high as possible.

> do is wrong.

What are you talking about? I am within my rights to post FS items as
often as I like.

I fully admit here that I was in error posting FS to the groups other
then the swap group, and for that I apologize.

It seems like I will be the only one following the rules from now on,
but I sure will also be watching and making they are enforced for everyone.

Hey Bud, is it easy to report someone to ebay????

Dan

And P.S., if the ISPs were as concerned with abuse as they are with
making BIG MONEY off me and others, the newsgroups and other areas of
the internet would be CLEAN.

We all know that isn't the case.

I've advertised FAs here just recently, my auctions weren't cancelled. I'm wondering if somehow, "maybe" someone sent E-Bay - the non tech wizards they are, a notice that perhaps your scanner was modified or whatever, to make them think it was illegal????? Just a thought. I've seen other FAs in here as well, none of them complained of having their auctions cut short.

The ONLY auction "I" had cut short, was a "linear" I was auctioning off - listed as NOT working, the finals pulled, for parts. I listed it I believe for 10 meters, yet they pulled it. No big deal... But they've never pulled my auctions for posting FA.

IF you have suspects in mind, I suggest you take it up with them. Why turn vigilante against the whole group?

> FAVF bad for ebay?

You would think so, but that's there rule. You can ask the same
question this way:

How does listing a FA posting on scanner and swap newsgroups where
someone might find an item they need or want, become really bad for the
newsgroups and it's readers, considering that 99% of what is posted
daily is plain SPAM and horseshit?

Answer - because some here have NO life and simply MUST enforce THEIR
will upon others.
>
> As for not reimbursing a listing fee they can get away with that because

I agree with you 100% on the above.

Well, the couple bucks for the listing fee is money well spent. This has

The UNIDEN 296 D and 796 D scanners ARE NOT continuous coverage scanners.

YOU CANNOT buy one no way, no how, no where, unless you buy a very old
model scanner like the 2006, etc...

There are a BUNCH of 296D and 796D scanners on eBay right now. There is
nothing about the scanner that would cause the auction to be removed.

Someone just dimed me out.

Now Dan, no doubt someone done you wrong, but....
Asking for additional funds for PayPal is against THEIR terms of
service, and of course they are owned by Ebay, so you just set
yourself up for someone to get you kicked out of PayPal.
I just wonder if there was something in your listing that was
offensive to them - did you say "cellular blocked"?. They may key on
the word "cellular" in any radio auction.

Good thought. I was thinking the same thing. We all know it is
impossible for the 796D to be continuous coverage or modded, but eBay
will go by whatever someone tells them.

This is why I can't wait to see their response.
>
> The ONLY auction "I" had cut short, was a "linear" I was auctioning off -

If NO NE dropped a dime to them about you posting FA, they will never
bother you. DO you really think eBay scours the newsgroups for
violations? They turn a blind eye until someone makes a complaint, then
they have to act.

>
> IF you have suspects in mind, I suggest you take it up with them. Why turn

Ed,

I am sure eBay will answer my inquiry in due time.

I am confident the remoavl was as a result of what I've stated.

I will post their response here, and hopefully the rules as well.

Once I do that, there will be NO MORE FA psoting anywhere on the radio
newsgroups.

Bruce...thanks for the "heads up", I didn't realize it was against their rules, but once again, I;ve seen it done numerous times. I guess it's just Dan Conti who can't do it!

Looks like this one was jinxed and I just aint gonna sell it Bruce.

If I put it on eBay for a BUY IT NOW price of $150.00, do you think anyone would drop a dime on me to get it cancelled?

DO you think anyone would comment here on how cheapt it was?

I doubt it.

> I just wonder if there was something in your listing that was
> offensive to them - did you say "cellular blocked"?. They may key on
> the word "cellular" in any radio auction.

Nope. Nothing. The bid on it the last time I looked before it was squashed was $510.00. More then what I listed the Buy It Now at. Yes, a high price, but I cannot control that, and I am sure anyone else here would look to get that price as well.

Read through previous posts and you will see the original FA on it and then some interesting comments. You make your own judgement.

A friend was contracted to do some wiring in a local hospital.
They were to order Belcon 1506A as part would run through an
air vent system. Some fool in purchasing decided to go with 1505A.
Same cable except it ain't plenium rated. The supplier wouldn't
take it back, and they had no storage space so he was given, as in
legal transferr with documentation.
The fool in purchasing lost his job.
Must be hard to be on the street when you are 58.

My friend had about as much use for this cable as I do a poke in the
eye. So he gave it to me. This is GOOD, very good cable loss at 1500MHz

is only 9.3dB/100'. Last weekend we helped a mutual handicaped friend
put up a better scanner and SW antenna. We used a laptop,my PRC1000 and
compared the 1506A with standard and low loss 50 Ohm coaxes. Pretty
day,
good fun. While we climbed like monkeys he fixed on hell of a supper.
First cookout of the new year and the food was GREAT!

With an NIB older radioshack diskcone, the one without the vertical
stinger, and a pasternack PL-259 to "F" female adaptor we tried some
tests. The 1505A was better, lower loss and greater noise rejection,
then any other cable we tried. Just for grins I used 50' of 50 Ohm
Heliax and while it was slightly better, heliax is are and expensive.
We also tried some of Beldons normal CATV coax and it was at least
as good as the 50 ohm and was a lot cheaper. His coax run is 50' from
the antenna to the ground (AKA "static" block. With a ~10 run to his
radio desk. He lives about 20 miles from Lexington KY, so we used
distant
(>50 miles)NOAA stations and the UKPD/LFFFUCG fire trunking system.
This isn't a state of the art installation. My friend isn't interested
in trying to receive weak distant signals. HE just wants to keep up
with
his old comrades. We could listen to PD/FR and aero comms from a 50
mile
radius. He is tickled pink. Perhaps his ineterest will grow. And
perhaps not.

The foil and copper braid offer much better shielding, going from 96%
for braid, to to 100% for braid foil. This helps keep noise from your
computers from entering the signal path after the coax is in your radio

room. I have an older Contura 40MHz? laptop that the LCD screen is
NASTY.
I mainly use it for my DeLorme GPS but it will control my PRC1000 very
nicely. We learned that routing of coax can be more important then most

radio users think. By passing the recieve coax across the front of the LCD screen , standard braid only coax started letting RF noise into the receiver.
I used a "bunch"(10 on each side) of ferrite beads to keep the RF from traveling up the braid's outer surface. Without the beads, even with the
coax well away from the PC, we got a few slight birdies. This even happened with the heliax.

For SW CATV worked as well as any other cable I have ever tried. Our friend
is on a limited income, long term disability insurance, and it was nice to be
able to do a first class install without breaking his piggy bank. While 1505A is clearly overkill it works very nice. This left more money for his radios.
I have loaned him my PCR1000 untill his radios arrive. And it was nice to use
a TV A/B switch to allow him to change from the diskcone to the 100' longwire. And yea the 100' longwire overloads the PCR1000 on HF, but a simple el-cheapo radioshack varaible attenuator, with F in and out takes care of that. And yes
a 100' wire beats a diskcone for HF reception. Period!

I think the average SWL and scanner user is missing a bet by not investigating
CATV coax and "F" fittings. There are good weather proof male "F" fittings
that are much easier, and cheaper!, to make good connections with then BNC.
Good CATV coax is much less expensive then similar 50 Ohm stuff because they
make so much more of the CATV cable. Ground blocks are inexpensive and will
allow one to easily meet the NEC requirement to ground the outer conductor on
coax. And this stuff is made to stand up to bad weatehr. Cable TV companies and
Direct TV want their installs to be as trouble free as they can make them.
If you talk with your local cable installer you can often get odd lengths of
CATV for the taking. I admit usng the 1505A was overkill , but why not, we ahd it.
Terry

Spam

eBay policy prohibits members from sending spam. Spam is defined as email that is both unsolicited and is commercial in nature.

* Unsolicited - The email must have been sent without the permission of the person who received it.
* Commercial - The email must discuss buying, selling or trading of goods or services.

Some examples of spam include:

* Unsolicited email offers for items that are the same or similar to items you are bidding on or have bid on in the past.
* Email sent to you from a mailing list without your permission.
* Direct or stand-alone invitations to join a mailing list.
* Email sent using the "Contact eBay Member" link on the eBay Web site to send unsolicited commercial offers.

Some members have also reporting receiving requests for personal information in email messages that are made to appear that they were sent from eBay. More information on these messages, as well as how they can be reported, can be found on the Email and Websites Impersonating eBay page.

Please be aware that eBay's spam policy applies only to unsolicited commercial messages sent by eBay members. If you are receiving surveys, promotional messages or other email from eBay that you feel you should not be receiving, please refer to the Notification Preferences Overview for information on how to change the types of email you receive from eBay.

Email messages that are not commercial in nature, including offensive or unwelcome email, do not fall under the eBay spam policy.

Sellers are permitted to invite other users to join a mailing list as long as the email is related to the transaction and the mailing list invitation is not the primary purpose of the email.

Instant messages and other forms of communication conducted outside of eBay are not within our jurisdiction. Although posts on the eBay Discussion Boards are not reviewed as spam, eBay does have a policy related to appropriate board usage.

If you have received spam from another eBay member, please report it. In order to investigate a spam report, we must have a complete copy of the email you received with the full header included.

If you received a warning for violating our spam policy and you believe that it was sent in error, please contact us .

If you were suspended for violating our Spam policy and would like to contact us, please send us an email.

Seems pretty clear.

ANYTHING related to eBay posted on USENET is a No No.

I'll be watching...

You don't need an eBay account to file a SPAM complaint.

Nice try

I looked in Google and can find no record of him cross-posting to
alt.marketing.online.ebay. The first posting about this was someone
else who followed up his message with:

SPAM SPAM SPAM

And thought his/her/it's wonderous message deserved to be crossposted
to AMOE. I can't figure how Kris Baker's name got brought into this mess
since Kris has said nothing about it as far as I can tell.

In any case, please argue elsewhere.

Dan

I didnt see the auction but if you did put in words about a fee
for using pay pal I can "guarantee" you that is what did you in. Its too
bad they waited till almost the close of the auction to catch it. Ive had
that very thing happen to me 2 times, and when they finally got around
to emailing me as to why, that was their reason. As to whether someone
reported it is another story. 1 of my auctions they shut down was close
to the end too. Try not and get too paranoid until you get your email
from ebay.

Dan
I understand your being mad, as I would be also.

This I don't understand, It's NOT snitching because you are being up
front, telling people you're gonna do it?
That would be like me saying "It's not theft if I tell you that I'm
going to steal it!"

A rats a rat and a thief is a thief!

Do like most and post anonymously and say " Hey look what I just found
on EBAY, what a great deal"

It talks about SPAM with regard to e-mail. eBay also considers posting
their auctions to Usenet SPAM, which it is, and as suck violates the rule.

I can see NO OTHER logical reason why the auction was cancelled.

If and when I receive a response from them, I will post it here.
>

Thanks Jeff. Nothing like adding fuel to the fire.

Do you ALWAYS kick someone when they are down?

My reputation speaks for itself. Many, many folks have done business
with me and were more then satisfied, here and on eBay.

I'm the "bad guy of the day" right now because I chose to rant about the
hypocrisy and silly pettiness that occurs here on the newsgroups.

Why do you think I went to eBay, as do most other radio hobbyists to
sell their equipment?

Think about it.

And do you ALWAYS end with "Nuff said?

Yes, I admit it. I confess.

I posted to THREE radio groups initally,(one of them a SWAP group, no
less) and then to the SAME Three groups a second time.

At least I can admit my mistake.

In the grand scheme of what goes on daily on these groups, did it really
warrant the action that was taken to cause me personal harm?

Dan

>

Jeff,

The PAY{AL fee stuff was not in the auction. I put that in the
Newsgroup post and someone called me on it, I acknowledged the mistake,
and posted a retraction right away.

Jeez, it really seems like my posts, actions, and I are being held to a
higher standard then MOST others just because I was trying to sell a
DEAD scanner.

Dan

Hey Dan, if you post to newsgroups, do one at a time, that is not considered spamming.
Also, If you read the ebay rules on newsgroups they don't want you to advertise ebay on the groups.
You are just using FA for your own personal auction and not promoting ebay.
Also, it says ebay will not take any action if somebody else posted your auction, or if they can't confirm
an e-mail address that is not registered with ebay. Many people do look at the auctions listed FA: on the groups.
Some people are cry babies, some with potty mouths who bitch about it. These people should use their filters so
they won't see anything with FA:.
A friend of mine that uses ebay posted his auction on the groups a few months ago. Now, he ran into a cry baby and said he complained to ebay. Well that auction went on.
This jerk used a false e-mail address to post thinking he was safe. As my buddy said to him on the newsgroups (which the baby spammed) YOU has been reported to
to your provider. He told them this guy is causing trouble on the groups and is spamming and using a made up address.
The newsgroup moderators don't take kind to that.
Guess what? My buddy posted more auctions and the "baby rat" was never heard from again. My buddy assumed that his own provider banned him since he never posted again. Seems it does not pay to be a schmuck!

Apparently you have NO right to do this, my friend as I found out the
hard way.

The no-life losers will drop a dime to eBAy on you, and whatever the
rule is they use, they are the auction GODS and don't like getting
complaints.

Rather then giving the poster the benefit of responding to the
complaint, they just DUMP your auction.

Funny thing is, looks like I'll eventually be back on eBay if I want to
sell this scanner.

I would not buy from him, and after reading all his rants, threats, and other BS, I'm glad they pulled his listing.

He must have thought he had some sucker hooked on his line at the price he was going to get, then Ebay cut the line and the fish got away. This is why he's so mad, muhahahahaha

I was not looking for a sucker, but trying to explain that to a moron
like you, who only sees rants and BS where there is a legitimate reason
to bitch about no-life losers meddling in the budsiness of others.

Venting? Yes. Pissed off? Big time.

I was only looking to get a reasonable price for the unit, and my Buy It
Now was BELOW what they sell for new, and this is a brand new unit.

As I said once before, it's not my fault if it bid past that amount.
That's the nature of EbAY.

Maybe something like this will happen to you some day.

Stewart,

First, I want to make it perfectly clear that I DID NOT post any of this on this A.M.E.O newsgroup.

This stuff apparently got here from a cross post by someone who thoguth it would be cute to have everyone here read this stuff.

It was meant for the scanner and radio groups only.

Since the cat is out of the bag, I will ask you in response to your post above, how does one know what is appropriate on a particular newsgroup?

There are no moderators, as is obvious by all the trash seen on most groups day and and day out.

How does one know if a newsgroup "permits it?".

WHat's to stop some jealous individual, mad because in his opinion, your item bid up to more then he / she felt it was worth, to go to eBay and tell them you are violating the rules of THAT newsgroup? WHo sets the rules? Does eBay verify this or just DUMP your auction?

Lots of inconsistencies here as to what is good for one being good for all.

Now you know why I'm pissed. If the rules were uniformly enforced for all, I'd have taken my medicine and moved on. They are not.

Dan

This seems to be the best info on the eBay rules for posting on Usenet newsgroups:

"eBay users may not post on Usenet groups (Internet newsgroups) to advertise eBay or an eBay listing that is inappropriate or violates the Usenet board policy. If Usenet abuse is reported to eBay, we may among other remedies remove the listing, issue a warning, or suspend the user's eBay account.

Please note that eBay can only take action in cases where it's clear it was an eBay member who posted to the Usenet group inappropriately."

As you can see.. It is permitted by eBay to post a link to your eBay auction listing IF and only IF it is appropriate for that newsgroup. If the newsgroup permits it, then go for it if you want... If it is against the policy of that newsgroup, then it can be reported to eBay and your ISP who each may take actions.

Who determines what can be posted on WHAT newsgroup?

Where can these rules be found?

Who decides what is appropriate?

My rantings aside, this entire episode will be a good learning experience for us all.

Apparently, if I go to eBay with a FA posting and tell them it's against the newsgroup rules, that person is in violation and subject to all kinds of actions...

I wouldn't respond in such a way ("80 ZILLION times") that I would be
annoying a bunch of people who have nothing to do with my dispute.

You were in the wrong, you got busted, and in your description of
how you would like to take revenge you are in the wrong again.

Why don't you just read the eBay rules and follow them? Do that
and no "rat scumbag" will be able to drop a dime on you.

Sorry for budding in Dan, But what you say is very true about Ebay. I recently posted a switch key for sale and the bids were going great until Ebay pulled the rug from under me removing the add saying that the key I was selling received complaints from "certain " people and that it was still in use today...blah blah blah. Who the hell does Ebay think they are ? The authorities watch dog ?
Christ I pay at least 200$ a month in advertising not to mention the substantial "cuts" Paypal takes off MY earnings.
Needless to say that I for one am very pissed also and especially sickened by the abusive Capitalistic Tyrant ways Ebay demonstrates. TOO BAD we dont have other options as popular as FleaBay.

Speaking of Ebay and shipping, It is terrible the number of complaints I get
from customers regarding the way their shipment arrive at destination in the
USA. the envelopes are opened,the boxes ripped open , the contents damaged
or missing. US Customs really do a great job on even small 6 X 6 bubble
shipping envelopes. They are fucking Paranoid scumbags if you ask me.
I receive shipments from the states that are literally intact yet inspected
by Canada customs agents.
Years ago I use to sent clothing and food items in Russia to friends we
knew. Even they received those packages intact and they lived in a communist
block country.
So I dont think that Ebay are the only ones that think they are GOD. The
lunatics at the US border have a serious ego problem also if you ask me.

I'll tell you guys, that really tickles my funny bone. First off a
"contract" can be formed between two individuals without even signing a
written paper.The basic act of demand and offer constitutes a "contract".
Ebay, although an American based company, operates in Canada, thus being
under the common law ruling and consumer laws. If it can be reached from
Quebec , it also falls under the Civil Code which is very clear on the
matter of cancellation of contracts. What Ebay has basically done is breach
a legally formed contract between two individuals , regardless of the items
or nature of the contract, and has literaly stepped in acting as third party
and cancelled the contract without the consentment of the parties.
That is a NO NO in any court of law. I think it's about time that people
begin voicing out the abuse from this company who freely enfringe on foreign
laws, use and culture.
I am convinced that a simple complaint to your local Consumer advocate
requesting an investigation will force Ebay to justify their act. Since
1994, Cyberspace and cybermarketing and exchanges are now integral to all
Laws in Canada and Quebec. Ebay is no exception.
I'm not trying to show off here mind you, I studied law a few years ago.
Thanks

Dan has been selling here for years. I have purchased from him with no problem. The radio I bought from his was absolutely like brand new and the price was very good. Every time he posts an ad I make sure to check it out. Besides, I don't like Ebay either.

Sorry to hear about it. Isn't it a sick, sinking feeling when an
auction you are running is suddenly yanked?

At least you were given a reason.

I have now sent in THREE inquiries asking why the listing was removed,
with NO response from eBay.

Apparently they are arrogant now that they remove your auction and don't
even tell you why.

Demand and offer don't make a contract in any sense of the word.

contract:
An agreement between persons which obliges each party to do or not to
do a certain thing. Technically, a valid contract requires an offer
and an acceptance of that offer, and, in common law countries,
consideration.

yes,. ebay does suck every now and then and their fee's keep going up, BUT
there is no other place on the planet that can get you top dollar for
your item.
In fact, many times more than that item is worth. BUT, who is to say
what an item is worth
to someone??

I think a lot of us are on your side Dan! Yes, Ebay sucks!

You are wrong. Only the alt. groups are anarchy; the big7 groups like rec.radio.*
all have charters that were voted on before they were created. Here's a link to
the charter for rec.radio.scanner (unmoderated):

http://open-systems.ufl.edu/mirrors/ftp.isc.org/usenet/news.announce.newgroups/rec/rec.radio.scanner

This is what was voted on and who voted for or against it and when (1993). I see
nothing about auctions/sales or anything else in the charter. Group creation predates
ebay by a long time.

You got that right! That's why I never do business with Hungarians or hire anyone but Jewish attorneys. The main thing is to never let my daughter date Italians. Who needs the Mafia headaches. Moron.

Says YOU, of course and this is really the meat of the problem here.

Self-appointed newsgroup cops like YOU, who get a bug up their arse
about a post, make their own rules.

As per Ed Clark's post above ....

>>>>
http://open-systems.ufl.edu/mirrors/ftp.isc.org/usenet/news.announce.newgroups/rec/rec.rad
io.scanner

This is what was voted on and who voted for or against it and when (
1993). I see
nothing about auctions/sales or anything else in the charter. Group
creation predates
ebay by a long time.<<<<

So, since the eBay rules say it is OK to post as long as the newsgroup
rules allow it, we now have TWO of the THREE groups I posted in allowing
eBay posting. Rec.radio.scanner and rec.radio.swap. Anyone care to
research the rules for alt.scanner?

Assuming alt.scanner has no prohibition against eBay posts, I was
railroaded by someone who made a frivolous complaint without merit to
eBay and basically lied, causing me harm.

Dan

Ed, my auction said nothing about the winning bidder paying PAYPAL
fees. That was in a for sale post on the radio groups I posted AFTER my
auction got cancelled. I wasn't aware that was a violation. Someone
apprised me of it and I retracted it immediatley.
>
> It's likely that a competitor saw that and narked you to eBay. Usenet

The ONLY reason I can think of for the removal was someone making a
complaint about the newsgroup posting. As you said, either a competitor,
or a no-life jealous lurker. And thanks to your information and insight
we now know they probaboly lied since two of the three groups I posted
on have NO prohibirion against eBay auction postings.

However, since eBay apparently refuse to answer my inquiry as to why the
auction was dumped, we may never know.

Isn't eBay obligated to give you a reason as to why they cancelled your
auction?
Dan

1484. Anybody find the W&W battery packs are not so hot lately??????????

Newsgroup: rec.radio.scanner
Date: 2005-03-19 17:37:40 UTC

Hi all, the last FEW battery packs and inserts I have purchased
within the last year from W&W battery seem not to be cracked up to their
usual high standards. About 8 months ago I ordered a battery insert for an
Alinco DJ-580T. W&W says that they use Sanyo or Panasonic cells. If
other brands
are used they will say so. Anyway, when I received the insert they were
green
batteries with no brand name on them. They didn't say Sanyo or
Panasonic like they
said in the past. Also the batteries had 1100 stamped into each
battery. The W&W sticker
says 12V @ 1200. I called them at the time and was told don't worry
about the 1100, it means
nothing. I said to myself ??? !!!
I few months earlier I purchased a NI-Cad pack for my FT-50. I can't
see into it but it never took a full charge, even
after a few weeks of proper cycling.
I have a buddy who has this expensive battery analyzer where he works,
I'm told the charger is a professional
charger and costs around $3500 dollars, its gotta be some gizmo.
Anyway, It did not perform well. I called
W&W and told them and they replaced the pack, which is a great thing
for them to do in the name of customer relations.
The one they sent me performed the same. About 3 months ago I needed
another pack for the FT-50 because the second
NiCad pack went bad.
I pickup up a NiMH battery this time at the local hamfest. This battery
is the same deal. Never
gets a full charge. I have used W&W fast charger, my Yeasu charger and
a MaHa charger on these
batteries. After I use them for many cycles it is the same. My buddy
put this one on his
expensive analyzer and the best it will do is 70 percent. WHAT
GIVES???? This is a 9.6V @1100MaH and
it acts like a 600ma nicad. I use these HT's to receive 98% of the time
since they are used mostly at work.
I have the same damn problem with a pack for my FT-530.
I have been very happy with W&W over the last 15 or so years. I don't
know what is going on other than
using cheaper batteries and charging for the higher priced good batteries.
BTW, that Alinco battery insert does not hold a great charge and has a
cell going bad. My batteries usually

last for about 2 years or so. Not any of these. I have had many HT's
over the years and I'm knowable of batteries
and the different types and charging habits. If I only had one charger
I'd suspect that, but with all the chargers I own
and with my buddys charger at work, I know it's not me or my equipment,
it's the batteries.
Any comments from people finding the same results??

IF you posted the deal about charging the Pay Pal fee, then retracted it, it
may have made no difference. Some one could have copied and forwarded to
E-Bay and/or Pay Pal, prompting them to drop you. As you should know, once a
post is made, it is there for all to see. The fact that you retracted it in
another post means nothing. The damage was done, and someone probably
alerted them and since they probably don't read news groups to see your
retraction, their dismissal of your auction - stands.

Quite frankly, "I" can't understand your charging a PAY PAL fee, this is the
first I've ever heard of anyone doing such a thing. It's the same as credit
cards, if you accept them, you pay a fee - about 2% or more... If you want

to recoup the fees, build them into the price to make up the difference without muttering a word. People would turn and run from any store if they announced that they're going to charge for your use of a credit card in their store. For Christ's sakes, if you had a Buy it now, then you obviously had a price with profit in mind, which you said was not only met, but exceeded. SOoooo what is the problem? You let the overflow of on the offer pay that fee - which couldn't have been too bad. A couple bucks to say maybe $10 tops, which it sounds like you had succeeded in getting anyway. It doesn't pay to be greedy..... Greed can kill a deal too!

Just my 2 cents.

Sky,
We had a case recently where a girl and a guy were transfering funds back
and forth to earn air mile points with their credit card. Ebay spied on her
and cut off her ACCOUNT. Yet there is a serious LOOPHOLE in this consumer
point earnings on Ebay and Paypal.. She had her boyfriend open an account
and they are at it again, transfering $500 back and forth and earning
points....makes me smile,
"laws are made to be broken,contoured and ridiculed" That's what it's all
about....

Dan here is what you do....
Grab some Ebay logo, and take a picture of it, Post it in the auction like
you would any item with photos not forgetting to put the Registered sign
next to the Ebay logo.
Just entitle it " EBAY ARE TYRANTS " and explain your case in the
description and put a 0.01 cent value on the ad.
I'll bet you it wont take a minute before they get back to you.
Furthermore, any emaikl you send to Ebay should be accompanied with a CC: to
your local consumer advocacy group, any Newsnet service you like and even
the newspapers if you have too.
It's by rattling the cage that you awake the animal.
Let us know how you make out.

Dan , Forgot to mention, I had a BOSS once who pissed me off so bad I wanted to Kill him.
Instead, what I did was PURCHASE a YEARS SUBSCRIPTION to some hardcore GAY S&M MAGAZINE (paid cash off course). And what I did was On the APPLICATION, I WROTE HIS NAME, BUT his 3 rd door NEIGHBOR'S ADDRESS......
So guess what, the guy who received it made it a point to deliver it to MY BOSS in person.
I would have loved to be there when he handed the S&M Gay magazine to him.
Sometimes it costs very little to get even with people and all along giving you the satisfaction of a job well done.....(I still rejoice today just thinking about it)....ha ha ha

Yep,

Fellows like those above would do all of that and more if they could.

Full of anger and judgement against someone who never did anything to them.

Don't buy anything from me, please.

It'll go back on eBay soon, and probably fetch a very good price.

More then it would from the cheap, whiny, no-life morons who inhabit
these radio groups.

Dan

I was very upset at first, as these threads indicate.

I have cooled off now, and learned a bit along the way as well.

Much of this problem I brought upon myself. I can learn from it and
move on. I may NEVER get an answer from eBay. So be it.

I've been on these groups for years, and should have known the the type
of folks who lurk here.

I didn't do anything underhanded or deceitful in my initial actions, and
I don't plan on starting now.

The answer to this kind of depends on the newsgroup hierarchy.

For an alt.* group (such as alt.radio.scanner), practically anyone
with sufficient knowledge of usenet to send out a control message to
newgroup the group can create a new alt.* group - the trick is
convincing news admin on various servers to carry the group on their
servers. The alt.* hierarchy is an ALTernative to the mainstream
(comp.*, misc.*, news.*, rec.*, soc.*, sci.*, etc.) hierarchy. It's
basically a refuge from the mainstream newsgroup guidelines.

The catch here is that sometimes alt.* groups are eventually moved to
the mainstream hierarchy. This is exactly what happened to
alt.radio.scanner which was moved to the rec.* hierarchy - and was
replaced by rec.radio.scanner. Now, the alt.radio.scanner group was
never removed from the alt.* hierarchy (primarily because news server
software is usually set up to ignore "remove group" messages - once an
alt.* group is successfully created and carried on mainstream Usenet
servers it pretty much exists forever)...but it was indeed replaced by
rec.radio.scanner, and you (and everyone else on Usenet) technically
are supposed to use rec.radio.scanner instead.

As for who determines what can be posted to rec.radio.scanner, that's what the newsgroup's charter and FAQ is for. Which brings us to your next question:

>Where can these rules be found?

The charter and FAQs for most newsgroups in the mainstream hierarchy can be found on the World Wide Web by searching for them using a search engine. The one for rec.radio.scanner reads as follows:

"rec.radio.scanner is a newsgroup for discussion about "utility" traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio and broadcast satellite-related material doesn't belong to rec.radio.scanner because they have their own newsgroups. This newsgroup replaces alt.radio.scanner. In addition, the rec.radio.scanner will be gatewayed to a mailing list which will be created as soon as possible after newsgroup creation, as there are many who do not have access to USENET news."

http://open-systems.ufl.edu/mirrors/ftp.isc.org/usenet/news.announce.newgroups/rec/rec.radio.scanner
has the complete archive of the entire process of rec.radio.scanner's creation from the first proposal through the voting process. Including the charter quoted above.

>Who decides what is appropriate?

If the group is moderated, as many are, this decision is made by the group's moderator(s). As an unmoderated newsgroup, rec.radio.scanner (like any other unmoderated group) depends on users and news administrators whose servers carry the group to voluntarily comply with the written charter as well as written and unwritten rules (netiquette). These are generally established over time, and is a big reason why most Usenet FAQs advise newcomers to "lurk" for awhile and observe how things are done in a group before they begin posting to the group - in unmoderated groups, the question of what is and is not appropriate for posting to a particular group is largely decided by convention among the users who read and post to the group.

Judging from the responses you've gotten thus far in this and the two other threads spawned on this subject, I'd say it would appear the majority of users in alt.radio.scanner and rec.radio.scanner, at least, who've expressed an opinion on the matter would seem to consider your FA: postings inappropriate. Remember that in the beginning, Usenet was largely confined to educational institutions, governmental agencies, research companies and other commercial enterprises with UNIX machines on site. It has now grown to include millions of users at commercial sites such as AOL and at companies around the world involved in every sort of business imaginable. Nevertheless, many of the customs found on Usenet today have their origins in the days when Usenet was very small and most Usenet sites were universities. That these customs and traditions began when Usenet was much smaller and quite different in nature in no way lessens the

anger many users feel when these customs and traditions are violated. One such custom is the tradition and belief that it is rude to advertise for profit in Usenet newsgroups. Advertising is widely seen as an "off-topic" intrusion into the discussions of any particular newsgroup.

Due to the decentralized nature of Usenet, there is no one person or body which can "enforce" the custom of staying on-topic. It falls on each user to help preserve the culture of open discussion and free speech that Usenet has come to embody by not posting off-topic material. This, of course, includes advertising. Advertising is by far the most pervasive form of off-topic posting, and therefore, gets most of the heat.

>My rantings aside, this entire episode will be a good learning
>experience for us all.
>
>Apparently, if I go to eBay with a FA posting and tell them it's against
>the newsgroup rules, that person is in violation and subject to all
>kinds of actions...

This applies not only to E-Bay, but also to Internet Service Providers. In my opinion, a responsible response to a complaint would be to examine the material that was posted and is the subject of complaint, compare to the group's charter and FAQ (if available) to see if the complaint is well-founded or not, and go from there. Unfortunately, most network administrators simply don't have time to do all that, especially with a large outfit like AOL or E-Bay or Google, etc. - and in cases where the matter of whether a post is appropriate or not depends more on user convention in the group, it may be almost impossible for a net admin to determine unless he/she happens to read the group regularly - so either they ignore complaints until they get served with legal papers, OR they take action on complaints that are not well-founded, allowing an innocent victim to maybe get his/her account yanked based on a complaint someone else filed purely as a form of harassment. Which of these is the worst extreme depends, I suppose, on one's point of view. Suffice to say, though, that anyone who continues to post material that he *knows* is considered inappropriate by most of the users in a newsgroup, should not be angry at anyone but himself if the consequences turn out to be rather unpleasant.

Again, all of this applies mainly to the two scanner newsgroups. The rec.radio.swap newsgroup was *created* for the purpose of advertising radio equipment for sale, auction, or trade.

http://www.faqs.org/faqs/radio/swap-guide/

...has the FAQ for this newsgroup, which happens to contain the following paragraph:

"It has become common practice to append "FS" ("For Sale"), "WTB" ("Want To Buy"), or "WTT" ("Want To Trade") to the subject line of an ad. With the new online auction service, eBay, we ask that you include "FA" ("For Auction") and also "eBay" to your subject line if you choose to place an auction notice. (Note that a recent straw poll revealed that many readers are not happy seeing auction notices on r.r.swap - post such notices at your own risk! If you fail to append "FA" and "eBay" in your subject line, you will surely be flamed.)"

Nose around on the faqs.org site and you can find FAQs for other newsgroups as well. One of the things you'll notice is that most groups are intended for discussion, not for advertising - rec.radio.swap being the notable exception in this family of groups. In other words, those who insist on posting advertisements to these groups do so at their own risk. It matters little that a hundred other people may be doing it too - that does not reduce (and in fact probably increases) the anger felt by users when they see such advertising where it rightfully does not belong.

For what it's worth, Dan, as I see it you have two separate issues here, one with E-Bay and one with the users in these newsgroups. So far as E-Bay is concerned, I do not do business with E-Bay either as a seller or as a buyer. I do not buy items sight unseen, period. So, I've no axe to grind with respect to E-Bay - though it occurs to me that your relationship with E-Bay is a voluntary one, and you're of course always free to stop doing business with E-Bay.

But insofar as the folks on the newsgroups are concerned?

Yes, you're right, more than half the stuff that comes through some of these newsgroups is off topic BS. You think it's bad in the scanner groups? Check out rec.radio.shortwave where half the morons in the group seem to think it's some kind of political discussion group where it's open season on whoever happens to be the current POTUS!

But Dan, that doesn't make it okay for you or anyone else to add to it. Two wrongs don't make a right; two thousand wrongs don't make a right. If you think back to how angry you felt when your auction was cancelled by E-Bay...you have some idea of how many people feel every time they download their usenet mail and find it full of stuff that shouldn't be there. Personally, I use a real newsreader that can, indeed, filter out things based on keywords in the subject, by sender, and by several other criteria as well - as you suggested upthread. The thing is, the newsreader still has to download the headers and then apply the filters to get rid of it - which means I not only have to waste *my* time to create the filters, I also have to waste more of *my* time and *my* bandwidth downloading the headers from all this off-topic and unwanted stuff that shouldn't be there before my newsreader can get rid of it all.

Since I pay for my access to the Internet, this means that in effect, everyone who refuses to voluntarily abide by Netiquette force me (and who knows how many others who read these groups as well) to pay for

the time and bandwidth expended to download stuff that I shouldn't have to deal with in the first place. Again, it matters not whether there's one person doing it or a thousand, all who do are equally guilty, and this is truly a case where if you're not part of the solution by voluntarily adhering to netiquette, then you're part of the problem.

John,

Thank you for a most educational and informed response.

Once again, I learned much from you, and agree 100%.

I've said it before, I take full responsibility for the FA postings, and have paid the price. Your also correct that justifying it with the fact that others do it as well is wrong.

Hey BUD, plonk this....
There has been some very good advice offered during this debacle, but not from you or the high horse you sit upon.

I've stated publicly in this thread numerous times that I brought this upon myself, and it has been a LEARNING experience for me.

I've watched your post for many years now, including the one you made is response to my FA post on this very scanner, before it was removed ny eBay.

It genuinely bothered you that the item was bringing more then YOU thought it was worth, and you said so, calling me a name as you did it.

You do nothing but sit on that high horse I mentioned and pontificate with your silly dittys about everyone else's business. And surprisingly, not many people call you out on it.

Well, say what you and others have said about me all you want. But I'm calling you on it.

Yes, I've posted a FEW SPAM auction listings now and again, but I don't do what you do. When I see a posting for an item that I KNOW is way overpriced, I keep my mouth shut. I KEEP IT TO MYSELF.
There's a guy on the shortwave group, RADIOMART that is obviously and constantly outright lying about items and auctions and scamming other hobbyists. There are threads about him all the time. If anyone should be reported to eBay it's him. But no, Dan is the bad guy here.

You talk about learning something? I should take a lesson from HIM. I don't see HIS auctions being yanked.

In closing, you sir, are a newsgroup ARESHOLE. IMHO of course.

AHhhh, I feel good now that I got that off my chest!

Hey Lumpy,

You have my ear....

I'm interested.

Other then the fact that I posted a FA eBay auction post to THREE radio newsgroups, two of them it appears ALLOW such postings, and the other being an alt group, and someone dropped a dime, quarter , or whatever on me to eBay, what are the other three reasons you think they dumped me?

I truly am interested in hearing your thoughts as I do not want to make these mistakes on my next eBay auction...

>
> Charging $20 for using pay pal in underhanded.

No it isn't.

First, it wasn't $20.00, it was $10.00.

In your rush to blast me, you should get your facts straight first.

Second, the eBay auction that was pulled made NO mention of ANYONE
paying ANY Paypal fees.

Third, I put that is a FOR SALE post on the radio groups in error. I
did not know it was against the rules. When someone told me it was, I
retracted the statement in the same post.

Now, I've seen others charge buyers the PAYPAL fee and get away with it,
that's why I thought it OK. DOes that make it right, NO, and as I said,
I immediately corrected my error.

However, it may be against eBay and PAYPAL rules to ask for the PAYPAL
fee, but how is it underhanded?

Keep trying, I can keep this thread going forever....

What IS underhanded are the TONS of eBay seller who auction items at what appears to be a reasonable price, then tack on shipping costs 2 or 3 times the cost of the item.

It's hidden profit, and THAT my friend is underhanded, yet it is done all the time on eBay.

Go after the REAL villains out there pal, and let this one go..OK?

I just picked up a used one and should have it next week. I'm wondering how it performs compared to other "wide range" receivers (Icom, Yupiteru, Uniden). How good is the HF performance, especially for SSB utilities?

That boss story was pretty good.
My first boss way back when was a scum bag.
I sent him a xmas card to the shop.
He opened it while talking to the owner of the place.
As he opened the card they both saw a
un-rolled condom that had Ivory liquid all over it.
And I wrote "to Bob, A real prick".
It took everything I had not to burst out laughing.
Needless to say, I sent him a card for many years.
Childish, yes, but the payback in front of the owner... priceless!!

Ok you think EBay cancelled your auction cause you had placed it FA in newsgroups? If that's so you should be talking to an attorney instead of spending time here!

1528. FS: IC706MKIIG, Bearcat BC780XLT, 440HT, and base antenna's.

Newsgroup: rec.radio.scanner

Icom IC-706MKIIG w/FL223 SSB filter, and remote installation kit.
Never mobile, non-smoker.
$850.00 plus shipping. Cont. US Only. USPS money orders only.

Icom 4SAT 440mhz mono-band HT.(needs work) The radio is a 10
cosmetically and worked
the last time I put it away. I recently took it out of the box, and
it powers up but only
squelches, no display, rx or tx. It is complete with box, manual,
charger, etc.
$50.00

Uniden Bearcat BC780XLT Trunk tracker III base/mobile scanner.
Complete with box, manual,
and AC power supply. $225.00

Cushcraft AR-6 6 meter base antenna. I believe it is around 3db gain.
$40.00
Diamond X510MA 144/440mhz dual-band base antenna. 8.6db gain
VHF/11.4db gain UHF. $125.00
Both antenna's won't be taken down until it warms up. They are still
in use at the moment. These are for pickup only!!!!!!!!!

So organize and influence Ebay to change their policy against outside marketing of auctions.

Poor account management. So you learned a valuable lesson.

List if for a $600 buy it now price, and I bet you will have some
INBOUND e-mails from people wanting to do a deal for a lower price off
of Ebay.

>
>And you know what? Doing so would violate YET ANOTHER eBay rule. If
>you click the link above and read, you will see what it is.
>
If they cancelled the auction, you have no relationship to do the
"deal" on Ebay. If they canceled the auction, there is nothing
stopping you from doing a private party deal.

"Ad Hoc Guy" <PussyFart@hic-ups.org> wrote in
news:3uP_d.31866$N8.871379@news20.bellglobal.com:

Right before 911, I had bought a new Savage Stevens single shot .22 caliber rifle, a model designed similar to the original model of the early 1900s (late 1800s?). Anyway, the rifle had a head spacing problem, and the shells would split and powder would be ejected towards my face, and an unusually load report was hear when this happened.

I contacted Savage, they said to return the rifle to them for repair, which I did. Problem is that it was sent to Canada for repair. 911 occurred, and it was the last I saw of the rifle. Savage acknowledged that heightened border security flummoxed the shipment of the rifle, I guess customs got hold of it, and Savage willingly replaced the rifle with no problems.

Though I can understand that 911 was a horrible time, I always wondered how many other items disappeared in shipment during those times and continue to disappear even now.

And the international situation is becoming farcical in terms of who is allowed to own what, nation to nation. Of course Canada and England permitted the ownership of unblocked scanners, and kudos for them for it. But it is my understanding that at least Canada doesn't allow digital scanners, perhaps someone on this group can set the record straight for me if they can, with the irony being that the U.S. permits it.

I listen everyday to the police scanner, still largely analog in my area, and I can see that even though there are occasional problems with someone using a scanner to further illicit activity, the number of occasions when someone provides tips because they were listening to the scanner and have some insight into a particular crime or know the location of someone being chased by the police, easily offsets, I believe, the illicit use.

I asked the Mayor of a borough near Pittsburgh about scanners. He was a lifetime cop in the same borough, and he felt that the contribution that law abiding citizens (listening to scanners) make to police work is very valuable.

With the borders to Canada and Mexico largely unguarded, it's a farce to pretend that the U.S. is actually doing anything about so called "Homeland Security". Neurotically opening small packages (yet inspecting only 2% of the train rail car size shipping containers coming into the U.S. West Coast from China) and confiscating single shot rifles and unblocked scanners is probably not having any effect, save for the enrichment of those that invariably come into the ownership of items that they didn't pay for.

1. Please make sure you are using the exact connector that came with your scanner to hook it up with you computer, don't use a usb port adapter.I know it's a pain in the behind to hook it up to the back of the computer..I've met a few guys who had this problem too.
If you are using an adapter, you have to readjust which port it is using..The older kind they give you from uniden uses port 1.Your usb adapters use another.I can't tell you which one it is without looking @ your cpu.

2. I have a few bad feqs soundwise but I only adjust them if they are real bad.

3 I took that lame battery pack outta my 296, cut the wires and hooked it up instead to a battery holder I took out of a cheap radio.I recharge those and only put them in when I take the scanner outside.
You can easily take the battery pack out, it clips into the back of the scanner.

A whole page of just extinct mammals:

http://www.petermaas.nl/extinct/english.htm
Birds:

Carolina parakeet (Conuropsis carolinensis carolinensis)
Formerly found in: Southeastern United States
Extinct about 1920

Heath Hen (Tympanuchus cupido cupido)
Formerly found in: Eastern United States
Extinct in 1932

Passenger Pigeon (Ectopistes migratorius)
Formerly found in: Central and eastern North America
Extinct in 1914

Laysen Rail 1944

Lanai Thrush 1931

Laysen Millerbird 1923

Fish:

Blackfin cisco
(Coregonus nigripinnis)

Formerly found in: Lakes Huron, Michigan, Ontario, and Superior
Extinct in 1960s

Blue pike
(Stizostedion vitreum glacum)
Formerly found in: Lakes Erie and Ontario
Declared extinct in 1983

Deepwater cisco
(Coregonus johannae)
Formerly found in: Lakes Huron and Michigan
Extinct in 1960s

Longjaw cisco
(Coregonus alpenae)
Formerly found in: Lakes Erie, Huron, and Michigan
Declared extinct in 1983

Clams:

Leafshell
(Epioblasma flexuosa)
Formerly found in: Alabama, Illinois, Indiana, Kentucky, Ohio, Tennessee
Has not been found alive in over 75 years and since 1988 has been considered extinct

Round combshell
(Epioblasma personata)
Formerly found in: Illinois, Indiana, Kentucky, Ohio
Has not been found alive in over 75 years and since 1988 has been considered extinct

Sampson's pearlymussel (Wabash riffleshell)
Epioblasma sampsonii
Formerly found in: Illinois, Indiana, Kentucky
Declared extinct in 1984

Scioto pigtoe
(Pleurobema bournianum)
Formerly found in: Ohio

Tennessee riffleshell
(Epioblasma propinqua)
Formerly found in: Alabama, Illinois, Indiana, Kentucky, Ohio, Tennessee
Has not been found alive in over 75 years and since 1988 has been considered extinct

Hey BUDSTER...

If you're gonna call me a name, at least do it to me directly, instead of "Behind my back", like you are here.

You see, I called you an asshole directly, to you face, because let's face it, you are one.

You STILL have that bug up your arse about that original FA post and the auction where according to YOU, the radio fetched more then YOU thought it would fetch.

You're looking more and more like the scumbag you dimed me out. You just can't let it go , can you? No life is it?

Because other bidders were willing to pay more then even I ever thought it would bring, that makes me greedy?

I posted the second, one day left FA ad not knowing it was that high, and even so, as I said once before, what does one do in that case?

Stop the auctio because it bid too high according to NEVER ANONYMOUS BUD?

Should eBay have a mechanism in their auctions limiting how high an item should go, because maybe someone would be paying too much?

I don't think so. It's an AUCTION, asshole.

By the way, I re-listed the item on eBay yesterday and it sold VERY WELL , in one day using Buy It Now.

There's my poor marketing skills at work again...

And yea, believe it or not, someone DID nuy from me.

Apparently, not many people read these newsgroups after all.

Dan

It doesn't.

This makes my point about how much horseshit is tolerated here,

yet they dime ME out for a few FA posts.

It's unreal and laughable.

That was a good tip. I never heard of the book before, but I found the company's web site and ordered one. It arrived quickly and was well worth the money.

Does anyone know what frequency Tethers operate on, the kind that they use for people who are under house-arrest? Would be interesting to know if any of the neighbors are a smooth criminal.

Thanks in advance.

Yep, that ONE auction was cancelled.

First and LAST time that will happen.

They still have not responded to my inquiry, but HAVE credited the
listing fees, so this WAS a very cheap education.

Re-listed the item on eBay yesterday, and STAYED FAR AWAY from these
groups. Item sold last night using Buy It Now for a very good price.

Proving as opthers have said here, that you don't need newsgroup
postings for an item to sell well on eBay.

Nothing AT ALL to do with the FA eBay posting was EVER made on this
newsgroup. It was only made on alt.radio.scanner, rec.radio.scanner,
and rec.radio.swap.

Thank a trouble maker from one of THOSE groups for cross posting here,
not me. Before this started, I didn't even know this eBay newsgroup
existed, but I'm glad I found it. Very informative.

So, that shoots down number 1.

>
> 2 - PayPal fee. Someone suggested that you were
> charging an additional $10 fee for PayPal. I didn't
> see that in you one listing I saw. I don't know if
> you did do that or not.

There was NEVER a mention of the buyer paying the PAYPAL fee in the eBay
auction.

That shoots down number 2.

>
> 3 - Prohibited item. Both of those scanners are

> Even though, in real life, they are if you know the
```

> IF trick.

The scanner I was selling DOES NOT allow for any of that, it is IMPOSSIBLE on current scanners, and has been for quite some time. Never mentioned anything about coninuous coverage in the auction, because, it is impossible. There are MANY auctions going for the very same scanner right now without a problem.

Number 3 goes down in flames.

>
> 4 - Competitor seller. VERO/NODI whatever. There's no
> telling how that can influence a sale. And there's not
> much any seller can do to innoculate themself against
> it.

Possibly, but I doubt it. I;ve sold many scanner and radios over the years, and never had a problem from a "competitor".. I am NOT a radio dealer, just an individual selling equipment. But, let's say number 4 is a longshot, maybe.

>
> 5 - Your general attitude. Dan, you are not coming

> the person currently in the QSO. Behavior like that
> makes it easier for people to say "well I would have
> just let it go but this guy is pissing me off. I'm
> gonna complain to eBay" (or your ISP or whoever).

Yes, I probably let my temper get the best of me initially, but that was AFTER the auction got dumped. Prior to that, I simply posted short, congenial posts USING FA as many people like, SO THEY CAN FILTER THEM OUT SUPPOSEDLY, and went about my busniess. Even when Never Anonymous Bud jumped in stating the price was too high, and calling me names, I stayed out of it and did not respond.

Number 5 goes down in flames.
>
> AMOE is primarily eBay sellers. Some of the sellers

> eBay seller.

My complaints and ranting began AFTER I was wronged by someone in the
radio scanner newsgroups, not from anyone here.
>
> I would hazard a guess that you got busted by
> SEVERAL of the people on AMOE who are quite
> good at knowing the rules and reporting the
> offenses. I have no idea what the other
> radio related groups demographics are like
> but it's probably reasonable to assume that
> they too have some netcops who busted
> you as well. Right or wrong, fair or unfair.

Impossible. As I said above and will reiterate, I NEVER posted ANYTHING
on this AMOE newsgroup. Nothing, no FA, nothing. DIDN't know it existed
until AFTER my eBay auction was cancelled. Go through the archive and
see for yourself.
>
> Bottom line - You got busted. Fairly or
> otherwise. Spitting and stomping about
> it does you absolutely NO good. It increases
> the negative image of you on this and likely
> the other newsgroups.

That leaves me with the most plausible reason, someone from the radio
groups got a bug up his / her arse because of the FA post, and because
they played god and thought the auction was getting a higher price then
they deserved. Period.

It was a rotten thing to do, but you're right, this was a learnign
experience. I don't regret ranting and raving, it broguth out a good
discussion, and reinforced what I already knew about these newsgroups.

I really don't care about a reputation on newsgroups, trust me....From
some of the crap I've seen people post, and what is TOLERATED, I'm not
worrying.

I re-posted the item on eBay and it went in less then a day using Buy It
Now. So muc for my reputation and marketing skills.

Thanks for your input.

Hey Fred...

Every other message? You consider 2 seperate FA posts for scanners
within MONTHS of each other every other message?

Shoe us examples of all these posts from me , every other message, every
day, every week.

Radio people with any brains have left those silly groups LONG ago and
now inhabit Strong Signals and the Yahoo groups where there is
moderation, and yes, FS and FA posts are allowed and tolerated, but all
the other horsehit and whiny nonsense found on these groups is not.

Don't get so caught up in the fever of blasting me, and think before you
post next time.

Dan

So let's get this straight...

You WON'T read the eBay/PayPal documentation the find out what the
rules are (we know that because you said you don't know what a
powerseller is, and it is impossible to find out the rules without
learning that)

But you are 100% sure that you won't ever break one.

Riiiiight.

You will be back, pissing and moaning about another rat scumbag
dropping a dime on your newsgroup listings.

Dr.Artaud, Thanks for the insight, It confirms what I always suspected about those military rejects working at the US borders (because they wont hire you unless you been in the service).
They wear a freakin gun (* .45-Glucks,38,.357 and 9mm Beretta's) both US imig and Customs do.
You go to Canada and those guys take time to say " HI , Welcome to Canada " versus the US welcome of " Wo are YOU..Where do you come from and what is the purpose of your visit !!!bluntly speaking). Then they ask you if you have a Police record...The last time I crossed the border at Champlain NY I was detained for 3 hours because when the woman agent asked me if I had a Police record I answered " YES, Synchronicity"......They have NO Fucking sense of Humor those Lunatics. I tried to tell her it was a joke.." Synchronicity " ..? You know the POLICE ? ha ha ha.....Ha ha ha was right. The emptied my two bags, I missed my bus and ended up sleeping in a flea bag motel until the next morning.
Now I know not to make jokes with Brainless killing machines(rejects from USMC).

My eBay feedback is excellent, and I've sold NUMEROUS items there
without ever having a problem.

Guess I don't know the rules.

I MEANT that even though after all this debate, it is still not clear
what eBay allows as to newsgroups, or more importantly, what the
newsgroups allow, I will simply NOT EVER post another FA post on the
newsgroups again. That should make everyone very happy.

If you think a question is too simple to bother with, why not just ignore
it?

==========

Question:
What's the point of even following a newsgroup to begin with if all you're
going to do is respond to people's questions with snide, derogatory comments
about the use of search engines?

Answer:
Because it creates opportunities to make snide, derogatory comments.

See, typical BUDSTER bullshit.

This guy doesn't agree with the almighty BUD, so you now demean HIM /
HER as well!

Oh you are SO true to form and predictable.

I'll say it one more time since you are either too dumb to understand,
or only undertsand what YOU want to understand....

> But he DID continue advertising it AFTER it was already TOO high.<

I "advertised" (another FA post) not knowing it was "too high". And
who are you or anyone else to determine if an item is "too high"???

I can accept criticism for making excessive FA posts on the groups.

But for you to be the arbitor of eBay pricing YOU deem to be too high
speaks volumes about you...

Dan

Wow. Challenging people to an actual physical fight.
This Dan Conti fellow isn't too bright, is he?

It sure is easy to report someone's auctions even when there isn't
anything wrong with them... A few such reports and the auction
gets cancelled. Then Angry Dan starts threatening people some more
and various people figure that it's fun to mess with him in other
ways. This is going to be quite the show!

1565. Patrick AFB Area Log - Sun, 20 Mar 2005

Newsgroup: rec.radio.scanner
Date: 2005-03-21 02:16:24 UTC
From: AllanStern@aol.com
Message-ID: <97.5bacfe4f.2f6f8878@aol.com>

Patrick AFB Area Log - Sun, 20 Mar 2005
==========

Busier Sunday than usual. My conjecture is that many of these acft were
participants in the Punta Gorda air show; I know that some were.

TERRA 5: Northrop Grumman JSTARS Ground Station, Melbourne IAP
7:57am: Comms with T-3 (E-8 acft on ground).
[231.75]

GATOR 50: T-43A, Randolph AFB
9:25am: Departs Patrick AFB to Randolph.
[335.8, 289.4, 133.75, 132.65, 124.8]

VIKING 03: C-130H, Minn-St Paul, AFRC 934AW "Flying Vikings"
10:10am: Departs Patrick to Pittsburgh.
[133.75, 132.65, 124.8]

REACH 754T
10:55am: Lands Patrick; rqsts 75K# fuel; RONs.
[372.2, 132.65, 133.75]

PUJOE 22: T-6A Texan II, Moody AFB 479FTG "Peugots"
10:24am: Departs Daytona Beach to Gainesville.
[255.4, 307.0]

GOLDFINCH 711: P-3C
10:32am: Comms with Fiddle at NAS Jax: "Ops normal; KB at this time."
[285.0; possibly 277.8]

LIMA TANGO 621: P-3C, NAS Jax VP-62 "Broad Arrows"
10:43am: Comms with Oakgrove: "We are at position India, turning to a
point east of Patrick. Parrot check sweet sweet. Look for us to come in off the
coast of Jax in about three hours."
[364.2]

HORSE 909: C-130E, Little Rock 314AW
12:15pm: Comms with MacDill Lightning Ops. "We were off at 1550z. Let
Little Rock know we will be there in 2.5 hours. We were doing the air show at
Punta Gorda."
12:28pm: "We are inbound IFE for #2 engine shutdown."
[311.0]

DERBY 57: C-130H, Louisville KY-ANG 123AW
12:42pm: Departs Patrick, does low approach over Shuttle Runway en route
to destination.
[133.75, 133.8, 132.65]

COAST GUARD 1098: MH-68A, Cecil Field HITRON-10
1:33pm; Area transition.
[132.65, 127.075]

GUNFIGHTER 01: F-14, Oceana VF-101 "Grim Reapers"
1:40pm: Area transition.

BOBCAT 20: T-45C, Meridian NAS TW-1
3:05pm: Northbound.
[285.5, 269.25]

ROPER 44: T-38, Beale 9RW
3:30pm: Area transition. Poss RTB from Punta Gorda show?
[291.7]

ROPER 11: T-38, Beale 9RW
3:30pm: Area transition. Poss RTB from Punta Gorda show?
[291.7]

KING 76: HC-1130P #65-0976 Patrick AFB 920RQW 39RQS
4:12pm: Lands Patrick.
[133.75, 321.0]

TITAN 04: C-130F, Cherry Point MCAS VMGR-252
5:55pm: Touch-and-goes at Patrick.
[133.75]

OMAHA 71, poss 71B
6:15pm: Comms with Hammer.
[282.425]

ROMAN 55: F/A-18, Oceana VFA-106 "Gladiators"
6:20pm: Northbound.
[285.5, 319.0, 346.25, 279.6]

RIVER 07: F/A-18, New Orleans USNR VFA-204 "River Rattlers"
7:36pm: Northbound, en route to Pensacola via Lakeland.
[285.5, 269.25]

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring
Patrick AFB (KCOF) NASA-KSC Shuttle Landing Fac (KX68)
Avon Park Bombing Range (KAGR) Cape Canaveral AFS (KXMR)
JSTARS E-8 Acft Integration Facility, Melbourne IAP (KMLB)
Worldwide Military HF Communications
Life Member: Missile, Space and Range Pioneers.

Same place all the complaints to abuse@rr.com are. If you can
threaten to flood a newsgroup and then not do it, then I can
threaten to make things up and accuse you of doing them and
then not do it. Fair is fair.

>My messages are in response to what others post or comment on this issue.

So are mine.

>I am entitled to repond, aren't I, or is this now a dictatorship?

Sure you are entitled to "repond". So am I. You "reponded" with a
threat to flood newsgroups, and I "reponded" with a threat to report
you to eBay and your ISP - and we KNOW that eBay will just boot
your sorry arse without doing any investigating or even responding
to your whinging.

>Complain away, my anonymopus friend. Easy to be a tough guy hiding
>behind the mask...

"Anonymopus"... I like my new name!

Are you SURE that I am not big enough to beat the crap out of you?
You had better think about that before inviting anonymous people
to meet you in person and settle things with fists...

Actually, it took a second or two for me to get the police record joke, but
I had a good laugh. Fortunately, (or perhaps unfortunately) I have not had
the occasion to cross into Canada since before 911.

Oddly enough, even before 911, I witnessed a car attempting to enter the
Canadian side that was refused entry. A caucasian driver and 4 or so
oriental looking passengers. I have no insight into why they were refused
entry. They were turned around and sent back towards the U.S. I became
intrigued by the concept of them being refused entry back into the U.S.?
Would they have to live on the bridge for the rest of their lives?

Regards.

You're gonna report me to eBay for FLOODING? What does eBay have to do
with THAT? Or why should they care?

Relative to eBay, I posted a total of TWO FA posts twice within a few
days. Not exactly flooding.

Are you the price police? What is "too high"? I've seen plenty of radio equipment sold daily for prices I feel are "high"... but Ebay (or any other auction) lets the market decide.

Dan's just advertising. Nothing to do with greed...or intelligence, just common sense.

You ARE starting to sound like the one who stirred this shit up to begin with...

Well actually NO. The originating (outbound) country being the US, they would have to return from where they came.If for instance they would not have had the necessary paperwork to re-enter the US, then they would be detained and the legal procedures for deportation to their last known country of origin would prevail. This is why many immigrants will destroy all their paperwork and try to enter Canada.
In Canada the Federal ruling says that any person requesting political asylum will be granted that wish but under certain conditions and for the time it takes to verify their credentials.(a way for them to buy time). In the meantime they are fed,lodged and free to go but a resident must post a bond for them. Otherwise they are under preventive detention in specially located Motels under guard Not in detention camps like in some areas in the US. I guess we are a bit more humanitarian in that field of expertise, although a few bad ones will slip through our fingers once in a while.
That's why Canada is so uptight on making sure that any arriving visitor have the proper papers to enter or visit Canada. It costs taxpayers a lot.
Dont forget that the government once they accept the refugee must supply him with lodging,food and a welfare check until he can live on his own. The exception to this is when family or friends will take them in under bond.

first , I gave information, then after I did the homework , I made the remark. If I WANTED TO BE A SMART ASS, I WOULD NOT HAVE EVEN BOTHERED TO GIVE THE INFO.
So, with that in mind don't be such a wussy and get offended, if I hurt your feelings, I don't care. really, it is not hard to dig up information, just seems like people are either ignorant or just too damn lazy to look it up themselves. Don't take it personal.

It would be an asset if it would have said " I have done a search and came up with nothing"
or something along them lines.

>eBay policy prohibits members from sending spam. Spam is defined as
>email that is both unsolicited and is commercial in nature.

USENET is not email. As eBay define spam in this way, news postings
are irrelevant to the rules as listed in your posting. This is to
stop direct-mailing of people off an address list etc.

Furthermore, eBay say "Now go and promote your auction" in their
"How To" guides. If they ban you from promoting your auction, why
ask you to promote it?

>If you received a warning for violating our spam policy and you believe
>that it was sent in error, please contact us .

If your auction got yanked for posting to a NEWSGROUP on the basis of
the above rules, complain to eBay and ask why.

I've been using a Pro-93 for several years, and love it. I've recently replaced it with a Uniden BC246T, but the Pro-93 is still used as my backup radio.

Hey, I was at Sebring too. I'm hoping to write up some notes about the scanning there, and I'll post an update.

re your question: I would guess that the Pro-89 was rounding the frequencies to what it figured are the actual values allowed in that band. If you're certain you know the correct frequencies it might be that the band plan has changed since the Pro-89 was made. It shouldn't matter much, though. The values it rounded to are only off by 2.5 KHz, and most scanners will receive the signal OK with that offset.

I just checked on my scanner (BC246T) using its default band plans. It rounds to 152.4450 and 157.7050 for those frequencies. I can change its channel offsets and probably force it to use those frequencies you gave, but they don't seem to be normal values for that band.

D. Brown

Don't let people like George bother you.
I think your question was fine. THAT'S what
news groups are for!
Folks like him have nothing in their life so they
answer in news groups and try to piss off people.
Hell if he has a CB he would be the one keying up and pissing folks off that
way.
Grow up George.....

There is no such thing as a "fair price" on Ebay. On Ebay the rule
of price is, whatever someone is willing to pay for it. Everyone has seen
outrageous prices being bid on items..... i.e. a new in the box Sony
2010 going for 700-800$. Like it or not it happens. "Value" is in the
hands of the people doing the bidding and no one else. Ebay is not a
retail store where item X sells for price Y.

Thought this might make for some interesting monitoring...

Does anyone have a list of specific frequencies commonly used by police wireless mics?

Thanks
OBB

1608. Cell phone Jammer for sale

Newsgroup: rec.radio.scanner
Date: 2005-03-23 01:18:04 UTC
From: donestuardo@yahoo.com
Message-ID: <1111540684.373288.45530@l41g2000cwc.googlegroups.com>
Source record: 14123

I have a nearly new cell phone jammer for sale - range is
approximately 30 metres in radius. Model MONIX MGB-1S cellular Jammer.

Used only one week (and then the tenant was gone! - hint great for
getting rid of loser tenants who depend on their cell phones for
calls).

Includes unit, plus 2 attennas, and a power cable and transformer for
North American Standard power.

Asking price $395 plus shipping.

Please email me at donestuardo (AT Sign) yahoo.com or call me on my
cell at (416) 458-0012 and I will be happy to go over details with you.

Thanks,

Stew

1612. SC230 vs BC246T

Newsgroup: rec.radio.scanner
Date: 2005-03-23 02:47:39 UTC
From: Philjr1 <philjr1@sbcglobal.net>
Message-ID: <fN40e.626$c76.451@newssvr11.news.prodigy.com>
Source record: 14121

I am on the market for a new scanner and am currently looking between the SC230 (racing scanner) and the BC246T (trunking scanner). My question is: Does the BC246T have racing freqs (nascar, drivers, pit.....) installed? I really would like to have this feature. This is why I am also looking at the SC230. Is the trunking feature that important?

Jim, the customs agent probably thought those were spy antennas aimed at destroying the US satellite system. LMAO

As Steve Halvorson so eloquently stated:

> Intcerested in getting a RS Pro 95 scanner..problem is the RS software to
> program th Pro 95 from your pc will not run on a pc with MS XP......Any
> suggestions as what one can use?
> Thanks
>
>

I'm using XP and I programmed my PRO-95 with no problems. Download Win95
scanner programming software for free. You can find the db files on the
internet for your area too.

Patrick AFB Area Log - Tues, 22 Mar 2005
==

It is getting to seem like old times as the launch date for the Space
Shuttle's "Return to Flight" launch draws closer. For the past week multiple flights
of astronauts in their T-38s have been heard coming and going to/from KSC.
More were heard today.

SATCOM
2:25am: "Test, test, test; 1-2-3; test, test, test." Repeated numerous times
by male and female.

You know Dan, at first I thought you were a young kid just acting very
childishly, but imagine my surprise when I learned that you're actually 47
years old and acting this way!

I also find it laughable whenever I see you use the term "brother or sister hobbyist", because you sure don't act like one. As a matter of fact, I see you have no problem overcharging any naive or newbie "brother or sister hobbyist"

And to top it all off, here is a direct quote from you made back in 1997: "Don't be a fool and pay more then is necessary...deal with an established, reputable radio dealer. "

Been having the same problem trying to buy a flash card with a $10
shipping+handling+insurance fee. If you read the fine print and bid
accordingly, there's no problem. Only real issue I have is that only
the shipping fee shows up in the summary. Ebay should make 'em list the
total shipping charges. The additional profit sux, but sneaking
part of it in under the radar on the confirmation bid page is evil.

The real problem is with the buyers.
EVERY 128MB Smartmedia card sold on EBAY in the last week has sold for more (shipped)
than what you can get it for (shipped) from any number of online
sources. So, there are enough gullible buyers to make the plan work...

Whoa! What makes a tenant a "loser" for using his cell phone? More and
more people are disconnecting from land lines and going totally
cellular. What would make them "losers" ?

1625. Realistic Pro-39 Squelch Problems?

Newsgroup: rec.radio.scanner

From: Chris <cjohnson1379nospam@earthlink.net>
Message-ID: <hEe0e.2352$S46.930@newsread3.news.atl.earthlink.net>
Source record: 14137

My Pro-39 seems to have a problem that I think is in the squelch circuit. I don't have a schematic but here is what happens. When it is first turned on, it works normally. After a few seconds, it acts like the squelch was just turned all the way up. It won't receive anything. I have 2 of these so I swapped boards and found the problem to be on the middle board. Can anyone help me out with a schematic or does anyone know what the problem could be?

Thanks,
Chris

I assume the tenant is a loser for some other reason and just happens to use his cell phone. This was a good way to get him out of there. These things have all kinds of practical uses, but, nonetheless, here in the US are illegal and I assume so in Canada as well. The wireless phone companies are going to insure that nothing is done legally to interrupt service to their golden egg. While these may sound like a cure to rude cell phone users, they only work on the symptoms. There will always be selfish, rude, obnoxious people...cell phones just make it easier to identify some of them. It is beyond comprehension how someone can have a normal conversation and then, just because their phone rings, they raise their voice like they are yelling at a basketball game.

Once someone is denied 911 or other emergency services by these rogue cell phone jammers, there will be a big law suit and a national P.R. campaign against the things.

Tired of trying to use your older software on those new Windows XP, USB and fast computers?

This laptop is speedy enough to play on the net and run most applications yet compatable with you older Motorola Software. Have those "Error 2003" With you Maxtrac program? Solve it right here.

Available:

Toshiba Tecra 8000 Laptop
This unit comes pre-loaded with Windows 98 (for your Motorola Programming)AND Windows XP Professional Edition

366 Mhz Intel Pentium Processor
128 Mb RAM
6.2 Gb Hard Drive
2 PCMCIA Card Slots
Li-Ion Battery
Built in 24X CD ROM
Stereo Sound
USB Port
9 Pin Com Port
15 Pin RGB Video port
Infrared Port
6.5 Lbs.
Windows 98
14.1 Color Bright Display
Power Supply

This laptop is also loaded with the following software:

Windows 98 Operating System w/

Quicken Home & Business 2005

Internet Explorer Ver 6.0

Laplink Gold 11.5 (No Cable included)

Microsoft Office which includes:

See Ashley Judd go down on Mariah Carey with Parris Hilton watching.

You are quite welcome.

I'm getting popular these days ... calls about scanning, adult videos
... and people not getting the hyperbole, pro bowl or tidy bowl. :)

Most scanners can scan more than one picture at a time. My old scanner,
Colorado 600 could scan more than one picture at a time ..... the
software that came with it would allow a user to define more than one
scan area at a time. VERY convenient. It's not Win Xp compatible, though.

My new scanner, Canon 3000EX, will allow the scanning of more than one
picture, but there is a twist. It does the area defining for a person
(if they want to scan more than one picture at a time). The problem is
that if the pictures have a white background, or there isn't an inch
between pictures or half an inch between the picture and the sides of
the small glass, the automatic scanning won't work. Very NOT
convenient. I found a way around it with DVD's ... scan them at night
with the lights in the room off and leaving the cover open usually works.

I'm sure many others will have different experiences with the same and
different scanners. In the meantime, it's time for a cigarette, some
hyperbole and some superfluous redundancy. I don't want to say it again
or repeat myself, but what I have said and typed is just my opinion
based on my own experiences. There are no statistics (42.7% of which
are made up on the spot ... and 98% of those disprove the other 98%) or
other facts to prove or disprove what I've said, so everyone is welcome
to disagree with everything I've said/typed and support their claims
with their own experiences.

What, whine like a bitch cause I made a statement about using a "search engine"
Like I said, I did some seating on the Internet, posted a link, then I got to thinking, "why am I doing all this searching?" I emailed him Personally and it bounced.
You don't have a clue about my life, what I do, think I got time for baby-sitting?
Look at the last hundred post I have made. Think I intend to piss people off?
Assumptions.

Piss him off? I don't care if I did or not.
Now YOU making comments?
Stick to the Facts.
NOT your assumptions.
I won't bring it down to your level. Not now, not ever.

I did use a "search engine" as George had suggested, and I did find that these are some of the groups George frequents or at least posts to under the nym used here.

rec.autos.sport.nascar
rec.radio.cb
rec.sport.pro-wrestling
rec.outdoors.fishing.bass

And to top it all off it looks as though he's from Alabama.

Two of these things together don't mean much as far as judging one's character really, but combined... well....

If your daddy walks you to school every morning because he's in the same grade as you.. You just might be George Kinzer.

Hey look George, I am really sorry. Looks as though I have struck a nerve bringing up the subject of "Tethers" and "House-Arrest".

You didn't really have to go through all of the trouble "baby sitting" me and presenting me with that nice Power Point presentation on Tethers. But I guess it gave you something to bitch about.

Anyhow, hopefully your parole will be cut short for your outstanding behavior and your friendly demeanor towards others. The Tether will be off before you know it and then you can start hitting the hooch again. Maybe you won't be so edgy and angry all of the time.

SMTP servers that subscribe to their (dsbl.org's) service won't
receive email from an SMTP server that has been blacklisted there.
That happened to me once. "sbc.yahoo.com" is my ISP's SMTP server and
one of their servers got blacklisted somehow. I don't know what yahoo
had to do to get unlisted, but I complained and it began working in a
few days.

I agree. Police communications a private, as are all two way radio communications. According to the Communications Act of 1934, personal or monetary gain form the unauthorized reception of radio communications is prohibited. The TV stations etc make money from reporting news events.

Depends on where you are. Do you need Digital? What system? UHF? VHF?
LTR? EDACS?

That's really low of you! If the person meant to stalk him, well you
just helped a sicko out. What if that's not the same Dan? It would be
bad enough if Dan got stalked because of you, but maybe you just set up
the wrong person, then you can feel twice as bad!

Oh spare me!
Dan has been posting with his call sign while selling his wares for years!
It's not my fault the FCC makes that information available to the public.
If you don't want people to know this info then don't post with your call
sign!

I disagree with your thinking. NOT that "I" am a part of this, but DAN
"does" leave his call sign in his signature at times. Your doubt of his
address being wrong on QRZ is pretty much null and void - unless of course,
he lied to the FCC when filing for a license OR QRZ made a typo. So, "IF"
someone were to want to stalk anyone who handily leaves their call sign, it
wouldn't take much to get an "actual" address. No big secret there! AND if
the QRZ web site is down, easy enough, go to the FCC web site. One way or
another, you can be found. Finding "Dan" is hardly an issue. The only
mistake which is open to make, is if he had someone answer his door for him
and the door knocker mistook him for Dan. IF Dan were to have moved, it is
"his" legal responsibility to inform the FCC of his new address, which if
done, would be put on line via their data base. It is pretty unlikely - if
he followed the rules, that he could run and hide - when leaving his call
sign floating out there.

I've attempted to heed the advice of radio hobbyist, newsgroup lurkers who've e-mailed me off group and advised, for many reasons to let this thread, and other related threads die.

However, I could not leave these groups without acknowledging just how low, mean spirited, and sick some of the participants here are.

You can go back 100 years, dig up as many old posts from me as you like. Since none of you abviously have lives, you have plenty of time for that.

You can accuse me of spamming, taking advantage of new hobbyists, and any other myriad of crimes to society I've seen you idiots bring up about me in the last week or so.

But in reality, the worst thing I've ever done on these newsgroups is post FS and FA listings for equipment to scanner or radio newsgroups, one of them being a swap group anyway. And, yes, I've crossposted as well, OK? Asked, answered, I admitted the infraction, and rest assured, you will see NO posts from me ever agin, let alone FS or FA.
(That proclamation should make you all very happy, but then, who would you pick on, or BITCH about?)

If I was as bad as you've all convinced yourselves I am, my eBay feebdack would be a horror show, and you would have dug up many newsgroups posts complaining about me.

In reality, there are many Good Guy Alert postings, which I notice you newsgroup detectives conveniently left off your assault against me.

I will quote from an e-mail sent by a trusted radio hobbyist with regard to these newsgroups...

"Dan, why are you wasting your time with an area of the internet that has seen it's day, and is a wasteland for idiots, boobs, and morons. Troublemakers who always remain anonymous?"

Truer words were never spoken.

I've attempted to let this die, but mean spirited morons want to now publicly discuss ways to obtain my address. Wow. Your hatred runs deep boys and girls. I pity you.

If any of you brave men or women, as a result of your inquiry into my address really want to meet with me face to face to discuss these matters, I have no problem with that at all.

If not, can we let this die now? There are plenty of other folks spamming, cross posting, and selling items on your beloved groups as we speak.

Go pick on them for a change.

I see no reason that you shouldn't post anything, heck I don't see anything wrong with posting FS or FA as long as they are in the header that way.
The only thing I said to you was even if somebody ratted you out to Ebay is no reason to turn into an ass and snitch everybody else out. I understand that you were upset and maybe spoke before you thought it through. Even if you don't post FS or FA stuff, you still should post if you felt like sharing your knowledge. Don't worry about the idiots, they have always been here and they always will be here!

Thank you for your insight. I made that silly threat in anger, but have not and will not do to others, as OTHERS have done to me. I believe in living and LET LIVE.

If the masses were truly annoyed by my FA and FS postings and cross postings, then I apologize. Hopefully they will also be as vigilant with others in their attemptsto "clean uo" the groups.

I apologize for the stupid and silly comments in my initial post.

I do believe that my insight and / or knowledge is no longer welcome here by those who seek to dominate these groups, and as such, I am gone.

No it doesn't. Try walking around with a pistol in open view, while not having a carry permit. The Constitution does not allow me to yell fire in a theater (The classic argument). There is no 1st Amendment issue here. Before there were scanners or tunable receivers in the police bands; newspapers, radio and TV reporters made beat calls. They called the desk Sergeant in each precinct and asked what's up? Or they camped out at the precinct. They'll just have to go back to that method.

Here is an excerpt from the ECPA
(e) (i) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, intercepted by means authorized by sections 2511(2)(A)(ii), 2511(b)-(c), 2511(e), 2516, and 2518 of this subchapter, (ii) knowing or having reason to know that the information was obtained through the interception of such a communication in connection with a criminal investigation, (iii) having obtained or received the information in connection with a criminal investigation, and (iv) with intent to improperly obstruct, impede, or interfere with a duly authorized criminal investigation, shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).

Yeah, yeah. You'll argue that they are not interfering with an investigation. That distinction is open to the officers at the scene. TV cameras can incite riotous behavior.

Another excerpt
"(16) 'readily accessible to the
general public' means, with respect
to a radio communication, that such
communication is not---
"(A)scrambled or encrypted;
"(B)transmitted using modulation techniques whose essential parameters have been withheld from the public with the intention of preserving the privacy of such communication;....."

APCO P-25, DES, 3DES and other scrmabling techniques are not "readily" available to the public; as conventional AM, FM or TV. Only to those that seek them out or reverse engineer them. Reverse engineering is another illegal activity.
The TV station might win or they might not. Remember what happened to the couple that taped Newt Gingrich's cell phone call and then disclosed it? Arrested, tried, fined.
SO take you purple finger and keep switching it from your a** to your mouth. You'll figure it out.

Here's 2 cents worth of opinion:

For non-digital trunking handheld:

The PRO-95 is on sale now at Radio Shack
for $129! This represents a fantastic value. 1000 memories, alpha tags,
computer
programmable, (a must in my opinion). Great free programming software
from Don Starr at http://www.starrsoft.com/

I do not own a the new Uniden 246T (trunk tracker III), But I just read a
review in
this Months Popular Communications by Gordon West.
This thing sounds pretty sweet: Upto 1600 memories, built in
frequency counter, etc... Wow for $229.

Uniden BCT2

I just bought one of these second hand.
Surprisingly I can find hardly any information on the net
for this radio.

Can't find a downloadable manual, specifications or even a review!

It appears to function properly.
It picks up NOAA weather stations just fine.
On the other service searches the only thing I have heard
so far is Morse ID.

I keep getting the "red light: alert but have not heard
any voice activity except on NOAA. (I take that back
I did hear what sounded like very brief Airliner comms)

Can any one offer any insight on how to operate this radio?

Thanks

Ok...here's a random thought for that media outlet...if anyone wants to
forward it to them...

Find out what type of system it is, and BUY RADIOS FOR THE SYSTEM. When
my city went encrypted, I went out and got a Motorola XTS3000 and
progged it for the local system. My radio worked just fine.

Must be a small market TV station if they didn't think of this.

" Stolen" electronic goods???? You're a real brave soul for coming
up with that one. I see you're a real brave soul for posting your real
internet address and name. I could even say you're a real asshole,,
but I guess I wont . Ive been on usenet before there was a WWW and
have seen all kinds and have seen it degenerate down to pinheads like
you on these groups and it is truly sad. I dont usually block people but
in your case I believe I will, since you have nothing to offer but BS.

This is ENCRYPTED, not just digital audio. For encryption you have to have the user's system encryption keys, which it isn't likely you'll get. If it was as easy as you say, we'd all be monitoring the FBI, DEA, Secret Service, etc.

Belden 1505A is not overkill and is not allowed by DIRECTV or Dish for installs, itï¿½s an RG-59 type and not known for low loss. Itï¿½s bigger brother, Belden 1694A is an RG-6 ï¿½typeï¿½ and has a bit lower loss. Both of these are precision 75 ohm cables intended for conveying 270mb digital video inside a premises and not specifically for outdoor CATV or Dish use. It also costs more than the lower loss RG-6 used for TV antenna and Dish L-band, an installer would be wasting money using this for his installs. You can buy Commscope (standard CATV stuff) RG-11 type much cheaper than 1505 or 1694 and get half the loss at 1000MHz.

For my Pro-95, I use the cable for my Yaesu VR-500, and a stereo to mono adapter. Works perfectly. Learned this on the web over a year ago. As to pin-outs, never did figure them out. Maybe I should find my old ohm meter.

What I need now is a USB to VR-500/Pro-95. Any ideas?

I guess they went digital, but _not_ encrypted. The encryption is not
breakable without big efforts, or without knowing a guy who is illing
to give you the key.

Sorry if this doubles, but 12 hours after I post my first reply it still wasn't
up.

The 1505A was "free". My friend is on long term disabiltiy insurance. His interests are fairly limited at this time. He wants to monitor the FD
that he worked in for 20+ years and they have gone to trunking.

I would have gladly bought him the correct cable, but his is very stuffy
about charity. He is OK with helping others, but has a very difficult time accepting if from others. Between he and his wifes saving, the procceds
from the sale of ther fancy home, and money saved by movcing to a much smaller town ~20 miles away from Lexington, they get by in a fairly comfortable life style.

His brother found a NRD525? in what appears to be mint condition. His wife found a Pro2067 at a flea market for next to nothing. The Radio Shack diskcone was sitting in another friends collecting dust. He dropped out of scanning 15+ years ago.

The Belden PDF spec sheet for 1505A says that the black is suitable for exterior use. If his scanning interest grow, and the need arrises I am for
certain going to put better, as in lower loss, cable up. But for now, he has
a very effective HF and VHF/UHF monitoring station.

Apparently I didn't make my primary reason for point clear:
50 Ohm RG-59 is not the only good choice for scanning or
SWL. "F" fittings are a good and inexpensive alternative to
BNC connectors. And by using "F" "static"/ground blocks
where the coax enters the dwelling, one can meet the requirement
of the NEC to "..ground the outer conductor before the coax cable enters.."

And that a little scrounging can greatly reduce the cash outlay for a beginner, or for an experimenter. I installed a coaxial dipole using the
1505A for feedline. "F" fittings all the way to my IC28A. SWR, 1.5:1. I can bring up a usefull number of repeaters. And on my ancient Pro2004 I can hear PD/FD/PS comms out to maybe 50 miles. My friend has a general class ticket, but has been inactive for a LONG time. I am going to

do a test and see if we can reach each other simplex. I am loaning him the antenna and an acient Clegg @mTR FM rig.

Just for grins I tossed a 10mtr coaxial dipole, again fed with 1505A, and was pretty well shocked by how well it works. Talked to a mobile in GA early this afternoon. Even with near 0 sunspots 10Mtrs opens up every now and then.

Now to see if I can trade a HTX100 from a friend who has left radio for the lure of evercrack. (EverQuest) He plays 30+ hours a week, and works a 40 hour work week!

I wasn't trying to say, or claim that 1505A is great cable. At it's inflated price
it is far from a bargin. But as you point out there are other, low and very low loss RG59/RG-6 75 Ohm coax available. But for free it is one hell of a bargin. And I suspect that even you will admit that given his listening
target, and antenna, better calbe wouldn't have given him better reception.
After all, full quiting is hard to improve up on. I don't know if it is practical to think of trying to monitor trunked mobiles directly, and at his distance I doubt
if heliax would help.

As for decrypting, i was told that there is a schematic in either Popular Science, or Popular Mechanics that can be used to build such a device, and can be built for somewhere around $100. I haven't found this yet, but if/when i do, i'll post it, and ask anyone else to do the same.

One thing to remeber is that cracking an encryption key in these fixed
key type systems, can be done with bruteforce technequecs with some ease.
Once the key has been found it is unlikely that it would be changed
as any new key would need to be programed into ALL units on the system.
Most of these PRS Systems don't use a Rolling Key Codes, as keeping
evveryone in sync is a major headache, and PITA.
Just get 50 CPU's clunking along on the same sample bitstream, and
when you get the key, don't let on to the systems folks that the
key is out.

Me cracked a pile of fixed keys over the years......

Try doing a google search on "police tetra in the UK."
British police have recently gone from analogue FM to encrypted digital
and are no longer receivable by scanner users.
Where Britain goes today the Americans follow!!

Yes, I guess it's supposed to be some sort of number cruncher, scanning when a digital encrypted signal is transmitted, which isn't very often. There's not very many digital scanners in the county, like one or two, so they don't really worry about encrypting unless it's a "major operation". Maybe i misunderstood, he might have been telling me about a box to decode not decrypt, saving me about $400 and using a normal analog scanner?? I'll have to get ahold of him and clarify

1714. MI mobile scanner law updating?

Newsgroup: rec.radio.scanner
Date: 2005-03-30 05:11:14 UTC
From: markbajek@aol.com

Source record: 14076

It appears the Michigan Legislture (house) has introduced a bill HR 4544 now in Judiciary committee that may eliminate the Michigan State Police permit provision for one and all ..

While making it illegal to use a scanner during a criminal act. and NOT asking scanner users to apply for a motor vehicle permit.

Below is a link to the new proposed statute.

http://www.legislature.mi.gov/documents/2005-2006/billintroduced/house/pdf/2005-HIB-4544.pdf

It would be nice for those interested in this subject to contact the Michigan state house of representatives and offer opinions or reactions to the proposed changes.

The Michigan house judiciary committee chairman is William Van Regenmoter.

Anyone know what the deal is with data cables for Icom Yaesu and Alinco scanners? Are they all the same? I have models from all three companies and only want to buy one cable. If they are all the same would the newer USB versions work for all of them to or are they software dependant?

Cheers,

James.

According to what I have read, this bill would finally legalize scanner use in motor vehicles, thus eliminating the need for a permit. The only thing that would be illegal would be the use a scanner in the commitance of a criminal act ("crime"), be it in your home, on foot, on bike, or in a motor vehicle... Unless there is something hidden within the text that I am not seeing, this actually looks to be a GOOD thing for those of us living in Michigan that want (or have) a scanner in our vehicles...

Although, the wording in once again is NOT specific enough, and would leave us scanner users open to new forms of abuse of the law... What exactly is deemed as a "crime". That could be anything...

For example, if I have my scanner in the vehicle and I get pulled over for speeding, I can be fined up to $1000, and/or spend 1 year in jail (plus the cost of the ticket) for my speeding ticket just because I have a scanner in my car? Is speeding not a crime? Sounds absurd, but just wait... The way they abuse the current law, I would not at all be surprised if this actually happened...

Looks good and bad to me. I like the proposed law, however the word "crime" needs to be replaced something more specific, and/or descriptive. Like, felony, or something similar. A "crime" can be anything; littering, J-Walking, letting your dog crap on someone's lawn and not cleaning it up (in some places anyway), etc...

While it will make things a lot better for those of us that want to have our scanners mobile, the wording of the proposed changes still leaves the law wide-open to abuse. The only difference now is that it will effect EVERYONE, not just those that want to go mobile...

Who defines what a "crime" is? The same officers that abuse the current law, that's who. Like I stated in my own reply to this posting, the word "crime" needs either a detailed definition added to the law, or needs to be changed to a more descriptive and straight forward word, like "felony", etc. A "crime" can be anything; from the simplest little speeding ticket or littering, all the way up to murder.

I know I don't want to be fine up to $1000 or imprisoned for up to 1 year, or both, for speeding 5 miles-an-hour over the speed limit in a car that posses a scanner...

In the U.S., contrary to popular belief, speeding is not a "criminal act". It is an infraction. The final bill will most likely spell out "criminal act", as a felony.

Nope. the hardware just isn't there for the radio to do those modes.
You need to add aBFO and a product detector.
Not hard in and of themselves, but given the small size of hte PCR100,
I bet it will be a interesting challenge.
You should have went for the PCR1000. You only wouldhave lost FM
stereo.

Underwealmed owner of a PCR1000 with DSP.

very few voice encryption systems use more than a 128 bit key. with
bruteforce attack a 128 bit key is certainly doable with a 50 cpu
distributed attack. should take about two weeks......

Me been there, done that.......

The Icom web page doesn't list FM stereo in the specs.
The owners manuyl does list FM stero in the specs and the
diagram doesn't show a MPX decoder/
And my PRC1000 only has one audio line, as determined
by moving a single shunt to change from spkear ot line for the
AF output.

You might want to check yours again, I suspect you will find
that it, like all the other PCR1000s dosen't have FM stero.
A simple test is to use a stero headset. I bet you only have
audio in the left side.

Sorry I can't spell all that well under good circumstances, but
today I am down with the flu and the cough syryp is a little too
strong.

Source record: 14088

The radio is in great condition (9 out of 10 due to insignificant scratch on display crystal, bottom right side and less than 1/4"...does not interfere with display). I have placed clear shipping tape over the display to further protect it.

The radio works as new and is guaranteed to NOT be DOA. It comes with the original manual and a copy of same in a binder. It also comes with the original power supply, re-chargeable batteries, a hard leather case, a telescopic antenna and a "Scanner Stand". It does not have the MW bar antenna (said to be ineffective anyway, although still available from AOR USA).

$350.00 + shipping or will trade for a GOOD shortwave receiver.

Please email direct if interested.

John, thecop@optonline.net

While the sound DOES come out of both sides on headphones, it doesn't
appear to be in stereo.
I see nothing mentioned of stereo in the help file either. I could have
sworn it had stereo fm output. I also have a PCR-100. Maybe it has stereo
out. I'll have to check before I open my mouth again.

I believe that its a mono signal but they feed the signal to both sides of a
stereo jack so you can use the commonly available stereo headsets instead of
the more difficult to find mono headsets.

There's an old saying... if it ain't broke, don't fix it. Problem is, many in charge of buying the comms systems are clueless about them and are easy suckered in. They're putting in 800 MHz systems around here, and one has been in place for like 4 years now and they "still" don't have all the bugs worked out. Many still complain of the lack of coverage especially at critical moments. The old system wasn't good enough to someone, so they had to take the chance. Not really the smartest move. I heard California recently had a snafu like this too..... Ya gotta wonder how they get themselves into these messes. And yes, the tax payer foots the bill.

As Jim mentioned in the another post, the Radio Shack (GRE Manufactured), PRO-96 Hand-Held, and the newly release PRO-2096 Mobile/Base work very well. In addition to those, Uniden Bearcat BC296D Hand-Held, and BC796D Mobile/Base work too.

The earlier generation Uniden Bearcats, that also had "Digital" capability, DO NOT work. Even though they are digital, the baud rate is not high enough, to be compatible with Michigan's system.

I've owned the Uniden BC796D, and the Radio Shack PRO-96. I think the Radio Shack PRO-96 was easier to program, and did a better job of converting the digital signal's audio. On occasion, the Uniden had somewhat of an electronic sound to it, similar to SSB on shortwave. It has an adjustment to "tune" the audio quality, but it's not always 100%, and why fool with that if you don't have to with the Radio Shack models! The Radio Shack model's MSRP is less expensive as well.

Be advised, when I was using mine, the MSP (Michigan State Police), in addition to using digital, would enable encryption on occasion! When they use encryption, you will not be able to hear them! There is nothing on the market, hardware, or software, that will allow you to decrypt their digital transmissions. It is also illegal (Felony) to do so. Shelby Township is on the same system, and soon Macomb County, and the city of Warren will be joining. It would not surprise me to see them all using encryption more, and more, rendering any legal scanner equipment useless.

Oakland County is moving to a totally different system called M/A COM OpenSky. This is a total departure from the digital system that MSP, and most all others are, or will soon, be using in Michigan. There is no scanner radio equipment on the market at this time, that is capable of receiving this system. Even though there may be good reasons for using this system, the fact that it is a total departure from the chosen "standard" for Michigan, makes it a very poor choice in my opinion. Should we every experience a situation on the scale of 9/11, here in Michigan, Oakland County will be in a world all of their own.

If you intend to use the scanner in your car, in Michigan, be advised, unless you are in Public Safety, or have a HAM license, you will need a permit from the MSP to do so. A recent post in the group indicated there are efforts underway, to remove this requirement, but it still stands for now, and the penalties are very serious! If you would like an application to obtain a permit, email me, and I will be glad to send you the form. There are no special requirements, other than you've behaved yourself, and haven't committed any serious crimes. It is easy to fill out, and submit, and is totally free!

John,

Very informative post.....

Looks to me like a good solution would be to form a new newgroup:

Rec.Radio.ebay or Rec.radio.auction

for those who need a safe haven to post their auction items.

Personally,I enjoy ebay buying and selling. For my purposes, it's not a
profit machine, just a means of furthering enjoyment of my hobbies by
using new or different equipment.

No, I just have a lot more communications experience than you do. I
graduated from High School long before there were computers, let alone
conputerlabs in them. I am retired, and have been a Federal Agent, and
worked for the Feds in a communications technical advisory position.
Like I stated before, this isn't "Rocket Science", and these things have
all been done before. It doesn't require any new knowledge base, it
just requires an understanding of the system and a bit of computing
power. Mac G5 Dual 2.5Ghz boxes have enough computing power to do this
type of bruteforce cruching all by themselves. Yea, it would take a month
or two but that is not unreasonable, considering that it is a desktop
machine and running 2.0Gflop+.....and that assumes that the key is found
in the last half of the iteration and not the first half. That is a
50/50 proposition, in bruteforce key cracking. Also with some knowledge
of the guy who setup the key, one could reduce the job significantly,

because most of these guys aren't crypies and they don't pick totally random keys seeds, which reduces the problem by a few orders of magnitude.

If one were to use a computer, or range of computers, for crunching
128+ bit keys or even down to 64 bit, where could this software be
obtained? Aside from experimenting with digital voice encryption, I
have some other keys that I would like to try and crack (keys of my
own, not others), like a 802.11g system I just setup and want to test
for maximum key strength. Probing around the net for such things these
days can brand you a hacker in the eyes of the cyber cops, even if your
intentions are good.

Bill & Jim, thanks for the info; I appreciate it. It's going to be an odd situation; the county's going digital and the city I'm in (Flint) will stay with the old system.

Boy, I felt your anguish and I completely empathize, but it confirms
the contentions I've had all along about this money-less electronic
fallacy.

It's a capitalists dream state made possible by technology, and the
proof is in stories like yours ... one account after another, from one
courtroom to
another. Therefore, anybody who relies on eBay, or
any such on-line service (for ANY reason) WILL GET
BURNED. I've never once used them and even I know.

As far as my common senses are concerned, those
willing to transact business with entities that can't be held
accountable for its actions, deserves
every pain a one-way risk is guaranteed to deliver.

This isn't commerce folks, it's high-tech thievery,
and it's high-time you realized it. Passing gold
over a local counter, or trading your labors for
goods and services ... THAT is commerce.

After all, our comforts don't come from overseas ...
they come from local people and businesses.

Aircrack for Windows? It cracked my own WEP key really fast.

Right now it says "Bidding has ended for this item" and shows a winning
bid of $510. Doesn't look like a "dumped" auction to me.

>
> (Please add your wish)

I don=3Ft share your wish for transmit capability, but here goes:

- The ability to set up more than one trunk system, and switch
easily between one or the other -- or better yet, to set up
one =3Fmemory=3F with one trunk system and another =3Fmemory=3F with
another trunk system, etc. and just scan across them like
they were any other preset. (I ask for this because there
are several trunked systems here in Orange County, CA. One
is at Disneyland, another is the Orange County Fire Authority,
and yet another is the county law enforcement system (city
and county agencies). There are others, but those are the
major ones. It sucks to have to program up one scanner for
each trunked system.)

- Mobile and desktop =3Fdocking stations=3F to permit taking a
system from the house and plugging it right into the mobile.
They make docking stations (or =3Fport replicators=3F) for
notebooks, why not for radios?

Given time, I suspect I could come up with a bunch, but those are the
first ones that come to mind.

> THANKS!!!

I think WA and OR got less rainfall/snowfall this year than normal. We
got a lot more than our fair share down here in Southern CA. We=3Fre
usually the ones that get hit with the big fires, but hopefully the
heavy rains will keep that from happening quite as much.

(Carson called Letterman up during one of his shows a while back.
Letterman asked about the weather out here in SoCal. Carson replied,
=3FGreat! The mudslides are putting out all the fires!=3F)

Interesting line of thought. Here are some more:

If pro is the opposite of con, what is the opposite of progress?

If buses stop at a bus station, and trains stop at a train station, what happens at a workstation?

Not sure what you mean by one trunking system per scanner. More than half
of my 245 is devoted to trunking systems. I regularly scan multiple
trunking and non-trunking channels. Am I missing your point here?

I've never had trouble from eBay sellers either. I've now bought over 25 items, with zero problems.

I wonder how much of this negativity is based on actual experience.

I also wonder why people get so upset about high prices in eBay auctions. That's what happens in auctions - people pay what they want to pay for an item. Sometimes people might get a little carried away (but that's their own problem and no one else's); sometimes people have a very good reason for being willing to pay a price premium to get something that they can't get locally or they believe is a "one off" (I've certainly done this on occasions).

From what I can see, the eBay feedback system is as good a way as any of gauging a seller. To become a power seller, you clearly need lots of positive feedback from lots of satisfied customers.

How about 100 banks of 10 channels instead of the other way around (10 banks of 100 channels each)?

Then you could more easily group items of interest together - for example, you could have once bank programmed for west county law enforcement, fire and ABC medics. Another bank could contain freqs for East county law enforcement, XYZ medic and the same fire company as before. That way, if you heard of a huge fire out on the west end you could scan the appropriate bank and be sure you were hearing all the pertinent comms but none of the traffic stops over on the east side. Having fewer channel per bank would mean reduced scanning time and fewer channels to lockout to avoid extraneous stuff. With computers downloading frequencies into radios organizing such an arrangement would be a trivial task and changes would be quite simple.

that's my .02 worth!

I'm looking for service manual for AOR AR-3000. Not instruction manual, but service manual with all those schematics, align procedures, etc.

You can contact me at:
tstimac02@NOSPAMyahoo.com (remove NOSPAM)

1771. Repair

Glad I came across this group, looks like plenty of smart people here. I have been in scanners snce 1989 and own a Realistic PRO-2006 (modified some), a Yaesu FRG-9600, and a Bearcat BCT-7, and several other very nice shortwave receivers.
Maybe someone has some ideas on this one: My Lowe HF-225 bacame dead on all bands but MW, keypad and frequency display are working fine, cutoff point seems to be around 3000khz, not certain anymore, but there is a definite cutoff point in there where it just gets quiet, which leads me to suspect input filters, coils, or other front-end circuits. This may have been result of lightning damage. All other functions working OK. I have the service manual with schematics and have done some work to this radio in the past. Can you give me any leads? I really miss ths radio. Email welcome (no spam) Thanks,
Bob from Michigan

I still gotta believe there was some heavy lobbying by MOTO and Verizon and other cell carriers to get this new system sold to as many cities as possible.Our county is falling all over itself toget it, and I know the cops here, who say it is totally un-needed.

I have a PDF file of some mods for the 3000a and it has a few
schematics. If you want it let me know and I'll send it. It's 940k
Harry

If you run across a service manual, a copy would be much appreciated.

1775. Uniden BC296D, Update Please!!

Newsgroup: rec.radio.scanner
Date: 2005-04-03 21:49:13 UTC
From: RSL <roblonn@cox.net>
Message-ID: <xyZ3e.3171$ZV5.3035@fed1read05>

Reports of problems with the BC296D having sensitivity issues early on. I guess they just broke. Has this problem now been resolved??? In addition is this still the best hand held scanner on the market or do you have another pick for the top radio. Icom IC-R20 is nice but seems to lack the TRUE scanner options that Uniden puts in its units. Just looking for an update on this radio. Thank You!!

1776. Re: Uniden BC296D, Update Please!!

Consider Radio Shack's (GRE Mfg.), PRO-96. The Icom IC-R20 does not do Trunk Tracking, or Digital modes. If you don't need digital, consider Radio Shack's (GRE Mfg.), PRO-95, the price has been reduced to only $129.99, an exceptional deal!

It=3Fs been a while since I had a trunking scanner, but the thing I ran
into was that I could either listen to the trunked system, or the
regular channels, and that I could only set up one trunked system at a
time. To go to a different trunked system, I had to dump the existing
one. That was VERY annoying.

Oh, OK

Certainly, the 245 and more recent scanners do not have that limitation.

High Robert!

Below, is quoted text, from a recent post of mine. Easier than re-typing it all!

Bill

The Radio Shack (GRE Manufactured),
PRO-96 Hand-Held, and the newly release PRO-2096 Mobile/Base work very well.
In addition to those, Uniden Bearcat BC296D Hand-Held, and BC796D
Mobile/Base work too.

The earlier generation Uniden Bearcats, that also had "Digital" capability,
DO NOT work. Even though they are digital, the baud rate is not high
enough, to be compatible with Michigan's system.

I've owned the Uniden BC796D, and the Radio Shack PRO-96. I think the Radio
Shack PRO-96 was easier to program, and did a better job of converting the
digital signal's audio. On occasion, the Uniden had somewhat of an
electronic sound to it, similar to SSB on shortwave. It has an adjustment
to "tune" the audio quality, but it's not always 100%, and why fool with
that if you don't have to with the Radio Shack models! The Radio Shack
model's MSRP is less expensive as well.

Be advised, when I was using mine, the MSP (Michigan State Police), in
addition to using digital, would enable encryption on occasion! When they
use encryption, you will not be able to hear them! There is nothing on the
market, hardware, or software, that will allow you to decrypt their digital
transmissions. It is also illegal (Felony) to do so. Shelby Township is on
the same system, and soon Macomb County, and the city of Warren will be
joining. It would not surprise me to see them all using encryption more,
and more, rendering any legal scanner equipment useless.

Oakland County is moving to a totally different system called M/A COM
OpenSky. This is a total departure from the digital system that MSP, and
most all others are, or will soon, be using in Michigan. There is no
scanner radio equipment on the market at this time, that is capable of
receiving this system. Even though there may be good reasons for using this
system, the fact that it is a total departure from the chosen "standard" for
Michigan, makes it a very poor choice in my opinion. Should we every
experience a situation on the scale of 9/11, here in Michigan, Oakland
County will be in a world all of their own.

If you intend to use the scanner in your car, in Michigan, be advised,
unless you are in Public Safety, or have a HAM license, you will need a
permit from the MSP to do so. A recent post in the group indicated there
are efforts underway, to remove this requirement, but it still stands for
now, and the penalties are very serious! If you would like an application

to obtain a permit, email me, and I will be glad to send you the form.
There are no special requirements, other than you've behaved yourself, and
haven't committed any serious crimes. It is easy to fill out, and submit,
and is totally free!

I do minor repairs on scanners all the time, and the number of Uniden made radios with any of the defects listed below is at least 3 to 1 over the amount of GRE radios with problems. This applies to Uniden made radios that RS sells too...

Speaker jack (The plug where the speaker wires connect to the PC board) not soldered at all. (Uniden only)
Speaker jack soldered on one lead only. (both VERY RARE)
Speaker wires not soldered. (Uniden only)
Antenna lead badly soldered, or not soldered at all. (Both)
BNC connector not tightened correctly (90% Uniden)
Epoxy on CPU was still wet when radio was assembled, speaker leads are embedded in it, and have to be dug out or redone completely. (Uniden only)

I just did another one, a Pro-94, bought as "no audio" at a garage sale. The speaker jack was not soldered on one side and the speaker wires had to be dug out of the epoxy. I charged him 30 bucks, so for $55 total, he got a fully functioning Pro94.

Not a great radio, but for that price, I'd take it..but a Pro 93 or 95 blows it away...

"The unforgiveable sins this earth must confront and overcome are
Nationalism, capitalism, and hoarding. The idea of every nation
should be forgot, price should be struck from the commons, and
princes should be seen for the devils they are. The sins include
our church, secret societies, and other religions which make of
the spirit of God a divide."

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

--
of the sense she once had, from day to day, of the glory of
Christ, and of God, in His various attributes, that it seemed to me she
dwelt for days together in a kind of beatific vision of God; and seemed
to have, as I thought, as immediate an intercourse with Him, as a child
with a father. At the same time, she appeared most remote from any high
thought of herself, and of her own sufficiency; but was like a little
child, and expressed a great desire to be instructed, telling me that
she longed very often to come to me for instruction, and wanted to live
at my house, that I might tell her what was her duty.

She often expressed a sense of the glory of God appearing in the trees,
the growth of the fields, and other works of God's hands. She told her
sister who lived near the heart of the town, that she once thought it a
pleasant thing to live in the middle of the town, but now, says she, I
think it much more pleasant to sit and see the wind blowing the trees,
and to behold in the country what God has made. She had sometimes the
powerful breathings of the Spirit of God on her soul, while reading the
Scripture; and would express her sense of the certain truth and divinity
thereof. She sometimes would appear with a pleasant smile on her
countenance; and once, when her sister took notice of it, and asked why
she smiled, she replied, I am brim-full of a sweet feeling within. She
often used to express how good and sweet it wa

Yes & not saying am loyal to uniden.
At least you get real tech. support if you need it, in the other hand
'radio shack' i be suprised if theirs such a thing/

if anyone says radio shack is the greatest thing since sliced bread,
their wrong, thiers alot better things.

What does "and NO! sensitivity issues" mean??

Radio shack does suck in a lot of ways, no doubt, but what sort of
"support" does Uniden do? What kind of support would you need? Help
operating the radio? If so, there are better sources on the net, that
really know how to use it.

Or is it their service dept??

Lose your radio, twice, like mine?
Send it back with scratches and more problems than when you sent it?
Like mine?

Take weeks or months (SIX!!) to send back you radio, unfixed?
Like mine??

Have no idea how to fix a design flaw, keep the radio for weeks, change
some parts and make it worse (BC200XLT Low Batt indicator/shutoff)? The
only fix? Take a pair of dykes and clip the circuit out!
Like mine??

That's my experience with 20+ years of Uniden "tech support".

I've sent several over the years to RS, and only one was lost (by UPS, not them), and a couple times it took too long to get it back, but not as long as Uniden. Even on Uniden made radios, they seem better than Uniden..

I am new to trunking scanners and I just got a Bearcat 250D. I have been struggling with the Fayette County Georgia Trunked system and can't seem to get it set up right. I can hear parts of the conversations but I can't follow them or see what IDs they are coming from. Any Help?

Sorry, yes GRE. So they make the scanners for Radio Shack... Radio shack seems to be a sleeper for sure as far as popularity , at least for me. One way I judge equipment is look on eBay to see if they are selling USED ones. I see as many radios shack 96 for sale as I do the new Uniden hand held. People say things like I don't use it, or to complicated but I suspect other reasons for buying a $500 scanner and then selling it on eBay a few weeks latter.. Your knowledge of Built Quality is very helpful! Seems that Radio Shack has proven superior build quality in your mind!

Over 20 + years of messing with them yes, the GRE built ones, at least the ones after the Pro 2004 of 1985 or 86 are better QC wise, it's no contest.

Not to say GRE radios are perfect. The Unidens usually have louder, if not better sounding audio, and for non trunked freqs, slightly simpler (1 keypress more per freq) to program. Until recently, with the current models, the Unidens used a crappy battery pack that was a pain to use, and couldn't be replaced with ordinary AA batts when it died unexpectedly. The Uniden RS models took AA batts and that was a reason to pick an RS model over the Uniden brand. After 20 years, they finally listened and went to normal AAs.

In most cases the GRE handhelds are better performers, RF wise, than the Unidens. Intermod is a real problem here and my BC-9000XLT is trashed on several channels from the police dispatch channel across the river, and a UHF TV station causes interference in both the 460 and 800MHZ areas. It's not horrible, but the dispatcher doesn't seem to affect my Pro 2004 and 2005, or my Pro 93 the way it does my BC-9000 or my BC3000.

I haven't had the $$ to get a 96 yet, but I have friends who have had both it and the BC296, and only one has kept the 296. I have played with both at the house here and the 96 is easily superior.

Hey Group!

I'm new to this whole concept. Oddly enough, I became interested in "scanning" after my TIVO recorded a show called Area 51:Fact or Fiction.

It was a stupid show, but one of the men on there went up on a mountain peak and was using a laptop program (and presumably some equipment hooked up to the latop) to monitor the radio communications taking place at Area 51 which was over 25 miles away.

I'm not a conspiracy buff, but the program he was using on his latop was intriguing to me. It looked like he could monitor any frequency he wanted.

I've actually wasted quite a bit of work time trying to find similar equipment, but I'm not really turning up anything. Therefore, I thought I would turn to this group and ask you guys (or gals).

Is there a hardware/software available that you can hook-up/install to a laptop computer that would allow you to "scan" or "trunk track" virtually any frequency along the "usable band"?

Sorry if I'm using the wrong terms...as a newbie, this is the best way I can phrase the question.

Thanks in advance for your help/advice.

Yes, that was Bob Grove, of Grove Enterprises.

http://www.grove-ent.com/

Grove sells the WiNRADiO hardware/software, that was used on that show.

http://www.grove-ent.com/winradio.html

A similar device, manufactured by Icom (IC-PCR1000), can be purchased here:

http://www.universal-radio.com/catalog/widerxvr/1002.html

Thanks guys! I appreciate the confirmation...man, I wish that wasn't so far out of my price range. Since I'm new to this, I'll have to pick up a "trunk tracker" that works with the Phoenix Area...any recommendations for one that can be "modified"...? Something in the $200 - $300 range?

http://www.dealstudio.com/viewtopic.php?t=888

Product Description - HP ScanJet 4600 - flatbed scanner
Device Type - Flatbed scanner - desktop
Max Supported Media Size - 8.5 in x 11.7 in
Dimensions (WxDxH) - 16.3 in x 11.7 in x 0.7 in
Weight - 3.1 lbs
Localization - Canada, United States
Input Type - Color
Resolution - 8-bit (256 gray levels) / 48-bit color
Optical Resolution - 2400 dpi x 2400 dpi
Interpolated Resolution - 999999 dpi x 999999 dpi
Max Document Size - 8.5 in (Letter A Size) x 11.7 in (A4)
Supported Media Type - Plain paper
Media Feeder Type - Manual load
Interface Type - Hi-Speed USB
Power - AC 110/230 V (50/60 Hz)
System Requirements - Microsoft Windows 98 Second Edition, Apple MacOS 9.1, Microsoft Windows XP Home Edition, Microsoft Windows XP Professional, Microsoft Windows 98/ME/2000, Apple MacOS X 10.1.5, Apple MacOS X 10.2 or later
Manufacturer Warranty - 1 year warranty

Battery and wire are self explantory. My guess is that the IC202 is an
integrated circut and the R215 is a resistor.

I just did a Google search. Unfortunately, the two versions I tried were both scanned versions - I don't know if there's a "proper" PDF version for this model anywhere.

Of the two I tried, this was the better - both a better scan, and a reasonable table of contents.

Today I went on line and downloaded the Radio Shack Pro-96 manual. I also noticed other things like a DSP software upgrade. I have to admit that after reading the Icom IC-R20, Uniden BC-296 and the Radio Shack Pro-96, The Radio Shack seems like a very Clear Winner based on Ease of operation, and software updates and flexibility!!! If the Pro-96 PERFORMS as good as everyone is telling me, then it seems like the logical choice. With Performance and Build Quality superior have I missed anything???

Patrick AFB Area Log - Tues 5 Apr 2005
==========

LIMA 54X (1254X): CE-550 Citation.
Customs acft reporting Ops Normal.
[282.425]

PAPA XRAY: Customs Unit.
Comms with Lima 950.
[169.45]

NASA 4: Gulfstream II.
Departs Patrick 7:02am; returns 6:30pm.
[133.75]

BAT 1, BAT 2: Cessna Skymasters, AirScan, Titusville.
Security flights over KSC and CCAFS.
[133.8]

GRUMMAN 87: Probably E-2.
Discusses flight problems with avionics techs at Grumman Base. Flight in Jacksonville area.
[382.6, 236.25]

GOLIATH: E-3C AWACS, Tinker AFB.
Controlling MAKOs (Homestead F-16s) and other acft in the Tarpon Range near Key West. Mentions tanker RHET. "MAKOs, push 301.5." Later departs to north part of W-158. AAR heard on 327.6.
[382.6, 288.4, 282.6, 344.2]

7D 427: UC-12B, Ft Worth NAS.
[119.825]

SENTRY 05: Flight crew c/s for GOLIATH.
Entering W-174 at FL280.
[344.2]

KING 22: C-130, Moody AFB.
Inbound Homestead JARB.
[372.2]

LIMA LIMA 80: P-3C, Jacksonville VP-30.
Orbiting in Whiskey Area.
[267.5, 269.3]

REACH 9013: C-5, Westover ARB.
Departs Patrick to Davis Monthan AFB after RON. Rqsts cl to Westover 589-3971. Chats with Patrick helo pilot.

[118.4, 133.75, 132.65, 124.8, 321.0, 255.5]
Photo: 063MVC-484, 485.

CUJO 01: C-27A, US State Dept, Patrick AFB.
Departs Patrick.
[133.75]

SEARCH 01: UH-1H, NASA-KSC.
Security flight over KSC.
[133.75, 133.8]

KING 55: C-130H 64-14855, Patrick AFB.
PJ drops at Cape Canaveral.
[133.75, 118.625, 251.9]

JOLLY 81: HH-60G Helo.
Departs Helipad G for local work.
[133.75]

JOSA 544: C-21A.
Pattern work at Patrick; lands, fuels.
[132.65, 133.75, 372.2]

DRAGNET: E-3C AWACS, Tinker AFB.
Working with FANGs, SNAKEs in offshore Whiskey Areas.
[284.5, 335.95 (FANGs), 388.95 (SNAKEs)].

LIMA LIMA 46: P-3C, Jacksonville VP-30.

1810. FS: AOR AR-2500 scanner

Newsgroup: rec.radio.scanner
Date: 2005-04-06 05:38:42 UTC
From: Rick Frazier <rickf@rickfrazier.com>
Message-ID: <4253768C.2278019D@rickfrazier.com>
Source record: 14022

For Sale: AOR AR-2500 Scanner.

AOR AR2500 Programmable Scanner
Base or Mobile Continuous Coverage Bands 1000 Channels

Includes RS AC Adapter and printed copy of manual plus manual and service manual on CD-ROM.

Free Shipping to US locations via USPS Priority Mail. Other shipping options or areas at additional cost.

I live on the big island of Hawaii, and there's not all that much going on here in the scanning scene, so am selling this unit because my needs are satisfied with my old RS pro-2021 and a ham handheld (Yaesu FT-530) that also can be set up to scan the few freqs it takes to keep up here. Trust me, it's nothing like living in San Jose CA, where I escaped from a while back. Here, I have all of the "interesting" frequencies available here in a single bank, not including the local airport...

For those that need discriminator or detector output, you can tap it on the chip TA-7761P, which is IC 13 on pin 9.

Total price including shipping as mentioned above: $100.00. If you want, I can accept credit cards direct through my company.

If interested reply to the email (rickf@rickfrazier.com) or call me on my cellular at 808-640-3549. Bear in mind that since the mainland is on daylight savings time, we are 3 hours behind the west coast... (if you call me before 930am west coast time, the cell phone is off...)

According to information I found on the internet, The AR2500 has continuous coverage from 1 MHz to 1500 MHz, with AM, FM and WBFM modes, as well as a BFO for CW and SSB. The unit is pretty small as home scanners go, 2 1/4"H x 5 5/8"W x 6 1/2"D. and weighing about 14 ounces.

There are 62 banks of 32 channels each, plus another 16 search banks. Scan banks can be scanned separately, or linked together. Scan and search rates are fast, about 36 per second, if frequencies within a bank are kept reason- ably close together. Search increments are 5, 12.5 and 25 KHz.

There is a 9 pin type D connector on the rear panel for external computer control, and AOR had software available, and aftermarket scanner control software may handle this unit. The antenna connector is a BNC type, and there is a switchable attenuator. The AR2500 has a 9-segment LED signal strength meter, a feature not found on most scanners.

One of the first things that a user will notice is that the channels within a bank are not numbered, and that the AR2500 will sort the contents within a bank in descending frequency order. When a bank is full, the word "FULL" will appear on the display, and one or more of the old channels will have to be deleted. Operation of the 2500 is quite a bit different from most scanners, but is not difficult to master it.

The manual is written by ACE, and is well-written and easy to follow, but lacks in any real technical data about the radio. It covers in detail how to program and control the radio through the computer port. There are about seven pages listing the contents of all 2016 preprogrammed channels, which are all the commonly used public service frequencies in use in the USA. (many of these have likely been replaced when I lived in San Jose)

So, if interested, let me know. No response here means it goes up on eBay soon....

Thanks
--Rick

Nope. The 296 I had was as sensitive as the 96, but intermod was worse,
so I'd take the 96 for that alone. If you program it with the PC
software you can get on the web, it's pretty painless to set up. Using
it takes a little time, but if you have used a scanner before, it's not
difficult.

Icom's problem is that Uniden and GRE have most of the scanner patents
split between them and so Icom would have to pay $$$ for rights. If Icom
would do this, make a digital trunk tracker that had decent scan speed
(the patents again), and normal scanning by bank (Patents!), and the RF
performance of my old 24AT they would have a killer if they could price
it at 500 bucks or so.

For some odd reason, Win95 can't read off my Pro95 but can write to it. I have my Pro95 sharing a serial port with my Uniden BC780 via a Y-connector. Could that be the issue? Should I be using a switch box to make the connection instead of the Y-connector? BTW: my PC is an HP Pavilion running Windows XP.

Try connecting it directly not thru anything. If thats the case then
coule be your Y-connector or switch box.

I got my bc200xlt back and it works... whoo hoo.. but I see that Uniden undid my mod to restore the cell band.. It worked fine with that mod for years.. OH well.. I don't think I'll bother remodding it.. not much point these days, and I would never want to break the law, especially with a scanner like this that lets you receive the images of the cell bands without the mod. Sneaky Uniden though.. :)

I wonder if they even realized why that part had been cut in half??

Where did you get a serial Y cable from in the first place? Serial is not intended to be connected to more than one device.

There are exceptions: e.g. Trunker has a special Y cable that allows two radios to be controlled off different pins from a single serial port; some Sun workstations have a special Y cable that bring com ports A and B out from a single DB-9 socket. But note that these are not connecting the same com port pins to two devices, they are simply separating the pins of a single DB-9 sockets onto two DB-9s.

The electrics of serial ports do not allow for parallel connections, and potentially could even damage the devices connected in parallel.

If you want to swap the serial between more than one device, use a switch box.

Go here and BUST A GUT laughing your ass off!!

here---> http://www.tearingdownstrongholds.com/

I quote from the kook site above:

"We've been conditioned to believe we need all these
towers for cell phones. These ARE NOT cell phone
towers, read about The ELF God. The types above
are typical for ELF towers that the NWO is using
for mind control messaging and dumbing down
the population. Sensitive people can pick up
messages such as "Accept The New World Order"
and others being blasted by these towers.
If you see white flashes of light emanating from
them then, and even if you don't..they are working
to condition your mind......"

---- cut ----

Baaaaaaaaaaaaaaaaa....Ha Ha Ha Ha Ha HA !!!!!!!!!!!!!!!!!!
I haven't laughed this hard since my last colonoscopy!

This a MUST SEE folks! : http://www.tearingdownstrongholds.com/

Oh, but don't be so quick to dismiss this as the work of Christian Kooks.
Right here on rec.radio.amateur.policy we have N9OGL inventing the very
transmitters that the ELF God is using. He makes incredible claims for
transmitting these hidden messages by compressing voice signals into digital
signals and transmitting them on ELF. Scary stuff!

Here's a sample of his "work"

> From N9OGL

> Tuesday, March 22, 2005

> A ELF TRANSMITTER

I think we should be afraid, VERY afraid!

Checkout http://www.monitor.co.uk/ . I just discovered it, appears to be very new. Well organized, clean, clear photos, graphics, descriptions of why and how-to for modifications to the Radio Shack/Tandy DX-394 General Coverage Communications Receiver. Also has PDFs of manuals and schematic.

Along with the 850 plus member user group at http://groups.yahoo.com/group/RADIOSHACKDX394/ and the collection of mods at http://www.mods.dk/view.php?ModelId=573, this new site helps make the DX-394 the most thoroughly hacked, researched and documented radio in the world.

Correction: the rating was increased about Jan 28/2005, not 2004, correcting an obvious mistake. This longstanding, unsubstantiated 1H rating on DXing.com probably adversely affected the opinions of some uninformed individuals.

They sure do, Frank! I sent the webmaster a message complimenting him on his work with the comment that the one thing missing was credit to the inventors of the mods, "from the pioneering Frank Cathell to whoever had developed these new ones I had never seen before". I have no idea who is behind the site and whether it's motivated by anything other than enthusiasm to share what he/she has done. It's first class, all the way.

Not according to DXing.com who gave it 3: " A rating of 1 to 5 stars for the
model as a value on the used market.
HHHHH Excellent HHHH Very Good HHH Good HH Fair H Poor. "

That Panasonic RF-4900 you sold for ?85.90 is rated by the same folks at 2
(HH) - that's closer to crap, but still 'Fair'. On Mar 30, you posted that
you wanted to swap it for a DX-394
http://groups.google.ca/groups?q=rogers.mail%40ntlworld.com&start=10&hl=en&lr=&selm=hZz2e.826%24wQ2.632%
40newsfe5-gui.ntli.net&rnum=12 .
Sounds like an upgrade from a 'Fair' to a 'Good' value radio and
inconsistent with your expressed opinion.

The Kenwood R-2000 you were selling off in 2003 is rated at 4 (HHHH) by
DXing.com. That's 1H more than the DX-394 and it sells for 2-3 times the
price on the used market. Just a little less crappy, was it? ;-)

73, Tom

Hi there thank you for reading this.

I have a realistic Pro-29 scanner its lowest freq is 66 to 88 Mhz., plus 137 to174, 406 to 512, 806 to 956

I have downloaded a copy of the manual and the manual is for the same model but listing the lower frequencies of 29 to 54 Mhz which i would prefer plus
108 to 174, 406 to 512, 806 to 823, 851to 868.9375, 896.1125 to 956.

I have had a look for mods on this scanner butcannot find any to alter the frequency coverage.

If someone know how to modify or a source I woudl appreciate any help they give me.

Regards Ron

Anyone know of any system that will monitor Cleveland Police in Ohio? It uses a Digital ASTRO system. I know there is a link that allows you to listen online, but it would be nice to find a scanner with this capability.

Folks, I'm old, I'm tired, and I'm lazy. I'm also forgetful.

Would someone kindly provide the formula for deterring the length of a full-wave antenna for a given frequency (a full-wave whip comes to mind)? Then, I can do the math. Better yet, I'll give you the frequency and _you_ can do the math. It's 160.890 mHz.

I will never ask this question again. Sorry. Thanks, etc.

Best,

: My view - as a longtime ham-radio operator who used to diss CB - and
: who has actually has used 2-meter simplex during a major area disaster
: to locate one of the very few area gas stations still with electricity
: to pump gas - is that a good mobile CB setup is better for emergencies
: than a good mobile 2-meter setup. That's because the CB will go
: further simplex (no repeater) than the 2-meter rig will when repeaters
: are either down or tied up due to an emergency - or if you are in some
: locale either lacking repeater coverage or where you don't know the
: active local 2-meter repeater. The "idiot days" of CB - when every car
: had one - are long over here in North Carolina; only truckers, hunters,
: and farmers seem to have mobile rigs here now. I now use CB almost to
: the total exclusion of 2-meter - though I have excellent setups for
: both in my car.
: FRS does have its uses. Like keeping in contact with others on
: campouts, skiing, or in limited areas in Iraq (now a major use). A
: major downside of FRS is the total inability to attach a good antenna.
:

Long term one needs to be on HF, thus at least a General class ham license.
VHF (2 meter ham), UHF (440 ham, GMRS/FRS) have their uses for local commo.
That is why the Army just purchased 20,000 ICOM F43G radios (440 MHZ) for
squad level commo. But the Army also purchased a lot of Harris HF radios as
well (AN/PRC-150).

Even SatCom has its uses. What one needs is all of it....

:
: oops.

You information on the ICOM program is out of date. The soldier intercom
has been replaced by the F43G

This is basically a 400 to 450 Mhz radio, with a more power than the FRS
radios that many of the troops are uing on their own. It is basically a
squad level radio, not meant for long range commo. However I do not think
that 20,000 is going to be enough.

BTW, you could purchase your own radio for about $400.

Icom America Wins Large U.S. Army Order for New Radios

F43G Series Offers U.S. Army Soldiers Sophisticated Two-Way Radios

Bellevue, WA - The U.S. Army has selected the Icom F43G series portable
transceiver for in-the-field soldier communications. "We are honored by the

U.S. Army's selection of Icom's two-way radios for soldiers in the field," says Hiro Nakaoka, President of Icom America Inc.

The Icom F43G radios are part of a package known collectively as the Military Bundle. Other elements of the Bundle include a headset, an encryption module, and the accessories needed to complete the custom package. But it's the F43G radios that are the core of the Bundle. These radios were tested extensively by the Army's Battle Lab before a purchase recommendation was made.

The GSA purchase deal is for over 20,000 Bundles and represents the largest government order in Icom America's 25 year history. This order follows on the heels of an earlier, high profile U.S Army order from Icom America - the Soldier Intercom. The new order uses Icom's new, next generation F43G series portable radios. These radios offer more power for today's urban-patrolling soldiers. The extra power helps radio signals "wiggle" around buildings, vehicles and other obstacles.

"We have over 5 years of experience supplying radios to first line Army units," said Chris Lougee, Vice President for Icom America. "The Icom Soldier Intercom was the first use of two-way radios at the squad level. It proved the viability of radios to replace hand and arm signals for coordinating squad actions on an objective." These new models increase transmission security, reduce size and weight, and supply improved battery performance, he added.

The largest previous government order was in 2000, for the U.S. Army's Soldier Intercom portable radio. This new radio differs from the Soldier Intercom in numerous ways. The previous Soldier Intercom was ordered by the Army with specifications for lowering the power level to 1/10th of a single watt.

Icom America's parent company, Icom Inc., was founded in Osaka, Japan. Icom is a publicly held Japanese corporation; its stock is traded on the Osaka and Tokyo Stock Exchange. Icom began as an engineering and manufacturing company, making advanced, compact solid-state radio equipment for use by amateur radio enthusiasts. Icom has since grown to become an industry leader with a product line that includes state-of-the-art communications equipment for land mobile and marine use as well as avionics. Icom America's headquarters are in Bellevue, Washington.

Wide frequency range and large channel capacity
The IC-F43G series covers a wide frequency range in one version (Two versions available, 400-470MHz or 450-512 (520) MHz). The 256 memory channel

capacity with 16 memory banks allows you to divide and store a variety of ?exible channel groupings. Easy memory channel selection with a simple rotation of the rotary channel knob.

Small and lightweight body
The IC-F43G series sheds size and weight compared with previous models, weighing just 300g (including BP-231) and measuring only 53(W)×120(H)×32.5(D) mm*. The aluminum die-cast chassis and polycarbonate casing combination meets MIL standard speci?cations.
* 10.6 oz, 23/32(W)x 423/32(H)x19/32(D)

I'm fairly new to scanners--been listening for about a year--and I'm
even newer to this group. Something that has me befuddled is the
consistent interest in an "unblocked" scanner that can pick up analog
cellular. What's the point? Does ANYONE use one of those phones anymore?

Is it just the inherent "appeal of the forbidden"?

OK, just to answer your question I dusted off my old Sony ICF-SCI and connected it to an outside antenna. Started searching up from 869.00 mhz. By the time I had gone through the cell band, I heard two conversations. One in english and one in spanish. The band is dead. I will keep the old Sony for mil-air and what ever else that my Pro-93 can't get.

He is asking for the length of a full wave whip- so multiply the above X4.
However, bear in mind that full wave whip will:
1. Be more difficult to feed as its end Z is around 1K Ohm or higher.
2. Have less gain than a 1/4 wave antenna at useful elevation angles.

an interesting argument against cellular jammers ..... but don't count
on anyone showing up to visit people using them. they are abundant
in South Beach Miami and on the Embarcadero in S.F. ..... usually
in clubs , sidewalk and upscale restaurants. I've had my cellfone
loose all it bars all over the place in these locations and missed
important calls because of them. people have complained to
the FCC bitterly but they NEVER come to do anything about them.
they say that the current budget cutbacks have left them very short of
enforcement manpower and they don't have the resources to investigate
those jammers.

I guess that may be the truth, but since i'm not from W.Falls i
can't totally agree. Our S.O. moved to Astro P-25 to be compliant with
Homeland Security, as we border Canada, and to have an "extended" range
being able to cover the whole state with just one radio system. The
older analog system required many hours of phone time between counties.
Once this new one is all in place, an officer can contact another in a
county that is 500 miles away just by using his two-way and the proper
talk group ID. Plus, during an emergency, all county, state, and
federal agencies(within the state) can communicate w/out having to know
each other's cell numbers. Along with being digitally coded and
encrypted...and yes, it keeps out the rubbernecks as well. For the most
part, there are two reasons for going digital: Secure communications
using encoding(which scanners can now pick up) along with encryption(so
far hasn't been cracked, or atleast this info isn't being shared), and
to extend communication range.

They're like apples, and oranges! Two completely different types of radios. As mentioned before, the PRO-96 has trunk-tracking, and digital capabilities, whereas the AR8200 does not. The PRO-96 is more of a "scanner". The AR8200 is more of a communications receiver. I think you need to buy both, to be totally happy!

Likewise. There is no comparison as they are completely different animals.

The AOR unit is a high performance receiver with scanning abilities.
The RS Pro-96 is a trunk tracking scanner with APCO-25 decoding.

I have both and use them for very different applications. I use the AR8200 for band scanning (such as the 902-928 ISM band, etc) as well as a portable HF receiver. (when used with a wire antenna)
I use the Pro-96 for scanning known frequencies and of course its APCO abilities.

As the previous poster stated, you would need both to enjoy the best of both worlds. If however, you don't own any other APCO capable units, I'd start with the Pro-96 (or a Uniden 796D or the like) to get on the APCO bandwagon (providing of course there are such services in your area. If you live in a region where there are no such services, save you money and get something else.)

Good luck!

One thing to consider when designing a system like the one above, is that
it depends entirely on common carriers to provide the interconnections
that support that wide area coverage. If you have a big disaster
(earthquake, supervolcano, or the like) that takes out your common
carrier links, by knocking all the microwave dish antennas out of
alignment, your really cool digital system DIES, BIGTIME, and no amount
of support is going to bring it back quickly, untill those links are
fixed. This is a couple of months worth of work for a State wide system.

Me been there, laughed at trying to do that....quickly....

City moving into 700 Mhz range

By David Tanner
The Examiner

Independence could pilot the first communication system of its kind in the nation.

The city is poised to implement a 700 MHz radio system for its police, fire and utilities, as part of a homeland-security grant.

The radios will provide more than just a communication system for police and fire calls, Assistant City Manager Larry Kaufman said.

A study team looked at severe weather, snow removal, downed power lines, broken water mains, and other types of emergencies when applying for a homeland-security grant.

City departments and outside agencies cannot talk to each other under the current 500 MHz system.

Communication can drop out because of a valley, a hill, or what's known as a dead spot.

"There are areas of the city we don't have radio coverage," Maj. Gordon Abraham said.

Abraham and Maj. John Main of the Police Department headed the grant team that secured $5.5 million in federal funds through the Department of Homeland Security. The city will pay $1.8 million, as part of the $7.3 million system. The police and fire departments will pay their share through the voter-approved public-safety sales tax.

Currently, police radios have a 68 percent effectiveness. Fire radios are effective in 86 percent of the community.

"The uncertainty is always there," Abraham said, "And those are the critical times."

The 700 MHz system will bring the city up to 94 percent coverage, one of the reasons the city was successful in getting the grant.

The city will also be able to expand the system to communicate with other metro agencies in times of emergency.

The system will carry encryption and trunking capabilities, making common scanners all but obsolete on emergency calls.

Kaufman gave the example of a police drug raid as to why the encryption is necessary.

"It doesn't help to have a person inside listening to a scanner," he said.

Some scanners can pick up 700 MHz frequencies, but the trunking system makes it difficult, Abraham added, by finding a open channel fewer scanners can pick up.

The Federal Communication Commission, which regulates radio frequencies, has reserved the 700 MHz frequencies for public safety.

The government eyed an 800-MHz system in the 1970s, but mobile-communication and cellular companies took up too much of the 800 MHz range.

The FCC could not implement the 700 MHz system, however, because some television stations used those frequencies.

But the government has begun to phase out the television stations on the 700 MHz frequencies.

In Kansas City, only KSMO TV (The Kansas City WB 62) remains on the 700 MHz system.

Kaufman said the freeing up of the frequency allowed Independence to step forward with the pilot program for public-safety radios.

Abraham said the departments will not encrypt every police call. Some of the city's dispatches could still be heard on scanners. Just not emergencies.

The city hired RCC consultants to determine its needs for the system.

Testing includes finding the areas of the city that have poor radio coverage now.

"We identified 57 buildings here in town to test," Kaufman said, such as schools and hospitals. Thick walls can diminish radio frequencies, but the new system will be better inside buildings, Kaufman said.

The city is considering Motorola as the provider, but so far there is no formal contract.

The system will require more towers, Kaufman said.

Tower locations the city identified are Lake City, the city-owned Massman Farm off Truman Road, Woods Chapel Road and I-70, Blue Ridge Boulevard and I-70, the city Water Department at Truman Road and Forest Avenue, and on private property at the LaFarge plant.

With the nation potentially watching to see how Independence fares with the 700 MHz system, officials, including Mayor Ron Stewart, are confident.

"We're going to be the firstest with the mostest," Stewart said.

1904. PopCom editor comes to Feeding Hills, MA - May 6, 2005

Newsgroup: rec.radio.scanner
Date: 2005-04-13 00:11:02 UTC

Harlold Ort - N2RLL comes to the HCRA!

Mark your calendars now for a meeting with Harold Ort - Editor of Popular Communications Magazine. Mr.Ort will be addressing the members and guests of the Hampden County Radio Association in Feeding Hills, MA.

Popular Communications is the premier magazine for all types of radio enthusiasts. With regular monthly columns from SWL to scanners, utility to ham radio PopCom has something for everyone. N2RLL will have the latest and greatest information about radio listening for everyone attending.

The meeting will be at the regular HCRA meeting place in Feeding Hills, MA, the Feeding Hills Congregational Church.

Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030

Date: May 6, 2005
Time: 7:30 PM

You don't need to be a member of HCRA to come to the meeting. Everyone is always welcome, all you need is an interest in radio communications. I can assure you it will be time well spent.

Because of the expected crowd, our regular club business will be postponed until the June meeting. In addition to Mr.Ort's presentation there will be coffee, donuts and other refreshments available and as usual a fantastic raffle.

If you are close to Feeding Hills, MA it is our genuine hope to see you at the meeting. Visit our web site for additional information, other club events and directions to the meeting.

Source record: 13821

I would go for the BC780XLT, if Mil-Air is your primary interest. I think it's the best available to the general consumer right now, with that coverage. It also has Alpha-Tagging, which is a nice feature! Not to mention, it's much smaller, and has a better build quality.

When the BC898-T was first released, it had a bug in the CTCSS circuit, that would cause the scanner to lock-up, after about an hour. New firmware is supposed to resolve this, but I haven't confirmed that it worked. I wasn't overly impressed with this radio, and sold it after a month.

1911. New Radio Shack (GRE) PRO-97 Cat #20-527

Newsgroup: rec.radio.scanner
Date: 2005-04-13 21:33:54 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <gYidncqE-c7XDcDfRVn-jw@comcast.com>
Source record: 13823

I just picked up the new Radio Shack (GRE Mfg) PRO-97, Cat #20-527, @ $199.99. There are numerous improvements, and new features, over it's predessor, the PRO-95. If you don't need digital, but want everything else, this is your scanner!

Bill Crocker

High-performance, extended-coverage scanner has the ability to scan both trunked and conventional channels at the same time. Program up to 100 frequencies in banks of 10. This allows you to organize frequencies for easier access. For example, race frequencies in Bank 1, police/fire/emergency in Bank 2, etc. Triple-trunking lets you follow a signal in virtually any market that uses an analog trunking system. Most major metropolitan areas utilize trunked systems. Signal Stalker II searches for nearby frequency transmissions and lets you hear a nearby radio without knowing its frequency. Skywarn lets you hear local trained severe weather observers calling in their reports. Hear severe weather 3-4 minutes before it is rebroadcast on NOAA weather radio frequencies and 4-10 minutes before you'd get the same warning on local radio or TV. Built-in search for Police/Fire, Air, CB, Ham Radio, FRS, GMRS and more.

PRODUCT FEATURES
. 1000 channels
. Triple-trunking
. Alpha-numeric display for ID tagging allows frequencies to be easily identified by the name you assign to them
. Lighted keypad for use in low light
. Signal Stalker II
. Skywarn
. AM/FM mode selector
. 20dB attenuator
. Digital weather alert indicates watch, warning, statement or test statement along with seven preprogrammed NOAA WX stations
. Five service search keys for marine, fire/police, air, CB and Ham bands
. One priority channel
. PC interface, cloning
. Key lock for safety
. Key tone on/off
. Low battery indication
. Frequency lock-out
. Power save
. EEPROM memory backup
. Three power options: 4 "AA" batteries (not included), 150mA rechargeable batteries (not included), 9V AC/DC power adapter (not included)

. Can use AC adapter #273-1767/C and DC adapter #273-1863/C
. Two battery cases-one for alkaline and the other for rechargeable batteries
. Rotary volume control with switch and rotary squelch control
. Jacks: earphone, PC interface/cloning and external power
. BNC antenna connector
. Includes belt clip, 6" flexible rubber antenna and two battery cases
. Triple conversion Superheterodyne receiver virtually eliminates image-type interference
. Frequency Coverage: 25-54, 108-136.9875, 137-174, 216.0025-221.9975, 222-225, 225.025-405.975, 406-512, 806-960 (excluding cellular) and 1240-1300MHz
. Scanner includes: detachable flexible antenna, belt clip, two battery holders
. Size: (less antenna) 6-1/2x2-5/8x1-3/4"
. Includes: VHF Lo/Hi, UHF, VHF-Air, 800MHz, Dual-Trunking, Extended Coverage

That's not true. I have a pair of these that have detachable antennas:

http://www.icomamerica.com/products/frs/f21gm/

I suspect the regulation is that a radio that is FRS only cannot have a
detachable antenna, though I'm not sure. Nevertheless, I know there are
GMRS radios with detachable antennas. :)

Sounds like an 800 mhz. frequency is being used. Typical MDT ranges
are 453 mhz., 460 mhz. and 853-870 mhz. If you hear a constant data
control signal that is somewhat high in tone that usually is a MDT
signal. But it depends on the manufacturer. Other MDT signals may have
a different audio control sound. All are annoying to listen to.

Consider yourself lucky. 3 years ago I had my credit card
information hacked from EBay. Like you said calling them is impossible
and emails are a waste of time. If my credit card information was
stolen imagine the hundreds of thousands of other credit card
information that was hacked. You didn't hear about this on the tv news
or in the newspaper.

I discovered it when I received a letter from a co. in Nebraska that
monitors VISA and MASTER CARD profile purchases. I used an "emegency"
credit card that I had not used previously in 2 years expressly for
Ebay. At the time I did not want to enter my credit card but had to. I
called the company and was asked if I had purchased $1,800 of computers
from ABC Co., in Chicago, $425 from Sears in Ann Arbor, Michigan, etc.
I knew immediately what had happened. I was not responsible for the
illegal purchases. The greedy vendors who sold by telephone suffered
the lost. I was sent another credit card with a different account number.

Don't do it. Discones are broadbanded with almost no gain on any
frequencies. Buy a Scantenna from Grove Enterprises and use a Radio
Shack vhf/fm/uhf tv mast mount preamp.

Normally, I don't like to take part in spreading unsubstantiated panic, but I'm inclined to agree with you on this one. When I had a Radio Shack (GRE), PRO-96, and was monitoring the Michigan State Police, they did in fact invoke encryption on numerous occasions. I have to believe they will be doing this anytime they are discussing sensitive information. Pretty much everything that was in the clear, was daily, boring, routine stuff.

As more, and more agencies go digital, I'm sure the use of encryption will become more common. If nothing else, it will be in the name of Homeland Security efforts. I don't like it, but I can't say as I blame them.

Source record: 13836

Fred:

Damn man it's because you are probably too close to the tower... Let's see, 102.9 fm. Twice the frequency is 205.8, three times 308.7, none of which click at the moment. What kind of scanner do you have, what are the intermediate frequencies on the scanner, and what frequency do you receive it on? Probably getting it on 102.9+ the high intermediate. If the high intermediate were 45Mhz, you would probably hear it around 147.9, not all that far off some interesting areas...

OK, I'll bite, where is River Center Blvd or Memorial Drive in Centralia? (come on, there can't be an actual boulevard in Centralia..., and the only Memorial should have been near a cemetery, which doesn't come to mind right now) For reference, I was born in Chehalis quite a while ago..

How far are you from the tower? Live on the east side of town by any chance? (I used to live at the end of East Main St, and recall a nice hill there, so I'd guess there is a tower on the top of that hill because it is about 400 feet above average terrain, and Centralia/Chehalis is pretty much flat if you aren't up in the hills east of town....

On second thought, (and I know it's been a really long time since I've been there,) but any station that claims coverage of Chehalis, Centralia and Olympia must be somewhere north of town... It wouldn't be out towards Tenino would it?

Country music station, huh? Is the JT (Junction Tavern) still in operation? It was at the corner of the old junction of the old road and the one that went past the "training school" on the way to Oakville... It was the first 3-way intersection (about a mile or so) south of the road to Tenino if I recall correctly... the old road roughly parallels Interstate 5. I'm sure the road numbers will come to me in the middle of the night... The JT was one of many taverns where I participated in the rental of innumerable pitchers of beer (Occasionally Oly, but usually Brew 66, which only a western Washington drinker would know anything about...) If you've ever consumed much of either, you know you don't buy beer, you just rent it on it's way to the ocean by way of the nearest urinal.

Ok, I got it now, the reason you're hearing it is because it's penance for living in (or near) Centralia (as if living there wasn't penance enough). Fortunately I escaped from there around 1962 for other places in western washington and about the mainland US, and finally landed here in Hawaii after 20+ years of servitude in California.... It was a long strange trip but I'm finally someplace I feel I belong.

Is Centralia still known locally as "retirement city"?

Good Luck!

Most likely, they don't have the encryption option in all their radios. Not sure with the newer radios, if it's still done with a hardware module, or if it's all software now. But I'm sure Motorola isn't giving it away. You see a lot of older Motorola Saber radios on eBay. The ones that have the encryption module, command more money. Originally, that module was very expensive!

If your scanner can do wideband FM and in range of the Alpine
tower, listen on 42.8MHz June 11 and 12.

Maybe not all user groups share the same keys? Or there are even
members without any encryption at all?

robert,

Thanks for sharing the magic. My AOR 8200MKIIB will pick it up.

How refreshing!!!

Andy

I'm picking it up on 102.9 and that is what they are broadcasting it on so it's not an image. Image was my first thought.. Centrailia is about 30 miles away.

Encryption usually decreases battery life by about 1/3.

On an XTS5000 running full time encryption and moderately heavy use,
it takes 3 batteries to get through a shift.

This is interesting; all this encryption stuff is relatively new to me, but I did not yet notice this. So I will have to make some measurements of the power consumption.

1938. Newbie Question - Out of the states

Newsgroup: rec.radio.scanner
Date: 2005-04-15 13:01:59 UTC
From: Jimmy <amitlay77@hotmail.com>
Message-ID: <425fadcf$1@news.barak.net.il>
Source record: 13868

Hi!

I'm out of the US and brought a PRO-94 scanner with me. I have no experience in trunking.
In this area, they use a Motorola system of some kind. I can get transmitions between 850-855MHz which probably represent several distinct talker groups, and the transmissions jump frequencies once in a while. I have been able to pick up some frequencies around this range which seem like data channels.

My question is: given I have zero experience with trunking, how do I get my scanner to trunk and monitor the transmittions? Again, I seem to have both the data channel and many of the active frequencies.

Thanks a lot!
Jimmy

Message-ID: <hc_7e.1371$JJ2.1024@newssvr12.news.prodigy.com>
Source record: 13851

Please bear with me, the last scanner I bought was a Pro-43. I'm looking for something I can hook up to an old computer and let run for a while logging frequency hits. I'd also like to mess with decoding digital signals (ACARS, etc.), so a factory-installed unfiltered output would be nice (but not required), if there are any models that don't require digging inside to get to the discriminator. Since I've always had hand-held units a base or mobile might be a nice change. It would also be nice to have something with a fairly well-documented PC interface so I could try to create my own logging/control/decoding software. I bet any number of Bearcats that have been around for a while would do the job, but thought I'd ask for a recommendation before watching ebay or the swap meets. What do you all suggest, at a variety of price points?

1941. IC-R75, VR-5000, ? $700 max

Newsgroup: rec.radio.scanner

Message-ID: <19bae$4260738b$18d69d2b$10815@KNOLOGY.NET>
Source record: 13852

I'm in the market for a tabletop receiver of fairly high quality, but it seems to me that all of the best functionality is in new handhelds. I've looked in some detail at both the Icom IC-R75 and the Yaesu VR-5000, and the substantial idiosyncrasies of each have me leaning heavily toward an IC-R20, which seems to have everything I want except the "correct" form factor.

Anything else I ought to look at before I just go get an IC-R20 tomorrow and be done with it? Budget is no more than $700 on the bottom line, which eliminates the AOR 8600 MkII.

Thanks for any advice,

I'd like to mention two new mailing lists for scanner listeners in Eastern Pennsylvania (especially the Lehigh Valley area) and Northwestern New Jersey.

Lehigh Valley Radio - is a general discussion list for radio enthusiasts in the Lehigh Valley area. Topics discussed can be anything radio related. Scanning, Shortwave Listening, Utility DXing, AM FM TV DXing are all 'on topic'. Real time reception and incident reports are welcome!

Nortwest Corner - a general discussion list covering scanning in Sussex, Morris, Passaic, and Warren Counties, in New Jersey.

To join either of these free mailing lists, send an email message to:

listserve@pompeii-online.com

The subject can be left blank, but in the body of the message type:

subscribe lvradio - for the Lehigh Valley mailing list

and/or

subscribe northwestcorner - for the Northwest New Jersey

You may also visit the sponsoring websites at:

http://www.pompeii-online.com - Look for the 'Pompeii's Radio Page' link and login with a username of 'guest' and a password of 'guest'.

http://www.northwest-corner.com - An excellent site covering Sussex, Morris, Passaic, and Warren Counties, in New Jersey.

If not concerned about "form," why not consider the Icom PCR-1000? Do a google search for Bonito software (version 5.2) and check out what you not only can hear but see. There is a lot of other software options on the net and more web sites than you can read in a long weekend in reference to the PCR-1000. BTW, the software from Bonito isn't cheap. pcox

For GMRS and FRS rules, see:
http://wireless.fcc.gov/services/personal/generalmobile/

"If you operate a radio that has been approved exclusively under the rules that apply to FRS, you are not required to have a license. FRS radios have a maximum power of ½ watt (500 milliwatt) effective radiated power and integral (non-detachable) antennas. If you operate a radio under the rules that apply to GMRS, you must have a GMRS license. GMRS radios generally transmit at higher power levels (1 to 5 watts is typical) and may have detachable antennas. The current fee for a new GMRS license is $80."

I've obviously missed something.

The station broadcasts on 102.9, and you're receiving it on 102.9, and you want to know why? The obvious answer is because you're tuned to its frequency, but I'm going to assume you know that already. So what part of your original question didn't I get?

What kind of scanner? Does it include WFM in its tuner?

Pro-2040 100 channel scanner. Comes with power supply and antenna. Unit is
in very good condition.
You can go to this site and see the specs and features, download the manual
for it too.

http://support.radioshack.com/support_electronics/17770.htm

Asking $85 obo and that includes shipping and paypal fees

Why do NONE of the other broadcast radios that are within range of my scanner
tune in then? As I stated in the first post I pick it up on WFM

Maybe your scanner is a much better radio than the others?
More sensitivity. Do you get other weak FM broadcast stations
elsewhere? Try tuning it in on the car's radio. Car radios
usually have sensitive FM front ends. Extend the car radio
whip antenna all the way out first.
```

No it's not the scanner, my wording was confusing.. should have been worded that
this is the only broadcast station that my scanner picks up. Something is
different about this station.

1961. public safety frequencies more important than Morse

Newsgroup: rec.radio.scanner
Date: 2005-04-17 17:59:17 UTC
From: Dan Jacobson <jidanni@jidanni.org>
Message-ID: <87r7h98etm.fsf@jidanni.org>
Source record: 13873
Cross-posted to: rec.radio.amateur.policy,rec.radio.scanner

For countries still with Morse code exams, I propose that more useful would be having the examinee list his local police, fire, ambulance, helicopter, water rescue, utility crews, volunteer units, civil defense, etc. etc. frequencies. Yes, he would have to get these non-amateur frequencies from his local scanner club, etc. in order to qualify for his amateur licence, but at least he would be more useful in emergencies if asked to help out listening in on the situation. Yes, he would have to acknowledge these are for listening only, etc.

Perhaps for Morse we might still ask him to identify some local NDB airport beacons, repeated as long as needed.

It's a very good antenna for handhelds. I have used others, but with no real improvement over the Austin Condor. The Austin Condor seems to work great in this range. I spend a lot of time scanning around 154-158 MHz, as many of my local PDs and other EmComms are still using that frequency range quite heavily.

Also, on some systems, the use of encryption decreases range and hurts
the received audio quality.

I was driving on I-10 with my 11 band Cobra radar detecto AOR-8200 Scanner, AOR-8000 scanner and CB.

I noticed that at times when a large truch would approach from either direction the radar detector wound show an "alert on either X-Band or Ka band.....

anyone have any idea what this could be. I think it might be the satellite communication system used by the trucks ??

On my last trip, I was on I-10, the radar detector went to level-4..noticed a Highway Patrol or Border patrol comming up behind me.. I was going about 85Mph, the guy passed me going much faster.... I monitored the area scanner frequencies and determined that a "Coyote" or one who lead illegals was fleeing from Border patrol and rolled his van killing two occupants... this happened around 4am...

both my scanners AOT-8000 and AOR-8200 do receive cellular signals and each can store 1000 channels. If I add a memory card to the 8300 I can store about 4,000 channels worth of data....

I wouldn't put that up until I had it sandblasted & inspected
for RUST. Remember - if you put it up and it falls (which in
this case looks likely), YOU are liable!

To answer your original question on weather it's self supporting
I wouldn't trust it. It looks like a 4 sided Rohn and that's not
good.

To put it plainly, I wouldn't put that up unless I had it inspected
and paid an engeneer to evaluate it. In other words, I'd rather
spend tha same $$$ on a new tower.

I seriously don't know, but your speculation could be correct...

One thing I DO know is that your Radar detector is not 11-band, desipe the
fact that Cobra claims it is.. There are only 5 bands tops. X, K, KA,
Laser, and (if your unit has it) SWS...

Radio Shack is discontinuing the PRO-95 (GRE Mfg), Cat. #20-525 Hand-Held Scanner @ $129.99!

Pro 95 1000-Channel Dual-Trunking

High-performance, extended coverage scanner has the ability to scan both trunked and conventional channels at the same time. It has 1000 memories-arranged in 10 banks of 100-and 1000 ID memories that can display your text entries for easier identification of frequencies. The triple conversion circuit and switchable 20dB attenuator cut image-type interference. The display provides four lines of 12 characters and has a push-button backlight with programmable on time. You can search preset non-trunked police/ fire, marine, CB, Ham and VHF-air frequencies for activity. Extended coverage includes CB (AM), 220MHz and 1260MHz Ham bands. Weather alert sounds an alarm and the display indicates level of alert. PC interface permits computer control (software not included) and easy memory cloning with another PRO-95 scanner (cable Cat. No. 42-2420 1/8" mono to 1/8" mono plug, extra).

PRODUCT FEATURES
. Power save
. Key tone on/off
. Alpha-numeric display for ID tagging allows frequencies to be easily identified by the name you assign to them
. Triple conversion Super heterodyne receiver virtually eliminates image-type interference
. Frequency Coverage: 25-54, 108-136.9875, 137-174, 216-225, 406-512, 806-960 (excluding cellular) and 1240-1300MHz
. Digital weather alert indicates watch, warning, statement or test statement along with 7 preprogrammed NOAA WX stations
. Power: Requires 4 "AA" batteries and/or adapter: AC #273-1767/B, DC #273-1863/B
. Jacks: Earphone, PC interface/cloning, antenna (BNC), external power
. Includes: Detachable flexible antenna, belt clip, two battery holders
. Size: (less antenna) 6-1/2&#65533;2-5/8&#65533;1-3/4"
. Includes: VHF Lo/Hi, UHF, VHF-Air, 800MHz, Dual-Trunking, Extended Coverage

Didn't they just 'update' that thing recently? I saw a new version of it in
Radio Shack a few days ago. All the changes are cosmetic however. Some of
the buttons on the keyboard have been moved around and colorized and the

case is light gray as opposed to black. It's still got the same ol' crummy GRE innards though.

Computer control, or computer programmable"?

Ahh, if it only got the mil-air band...

1986. No idea what I am talking about!

Just a shot in the dark. My better half has a GRE PSR-239 which she has messed about with for a few years now without problems. It has now decided not to locate any stations and scans away without finding anything. She says she may have pressed something to cause this but no idea what, or perhaps it has decided to call it a day or maybe the ariel has failed or perhaps it isn't a good model anyway. A check list would be handy as we can't even find the manual. The other solution is for us to call it a day as we are in our sixties and probably too old for this sort of stuff!! Any suggestions would be helpful, even chuck it away or recommendation for a new one. Thanks in anticipation Clive Cheshire UK

ok clive and hello
now at a guess, i'd plumb for the aerial connector on the inside of the scanner which has a wire from it's centre pin to the scanner board having come a drift...that is a common problem amongst scanners.

now it could be 1001 other things
the sensible thing to do here is find an on-line copy of the manual and try that first.

maybe someone can help

mike

I am not familiar with this model, but some scanners have an attenuator feature. This reduces the sensitivity so nearby strong signals do not overload the receiver. If you still have the directions, check and see if you have an attenuator function. You may see a button on the radio labeled "ATT" or "ATN" or something like that. If your radio is equipped with that, then try pushing that button. It is possible the antenna connection inside the radio has broken to the circuit board. If none of these are solutions, I would guess that something has burned out in the receiver circuit and the radio will need to be repaired by a repair facility. There are a lot of possibilities. I have named a few of the more obvious.

Thanks Both

I did have the manual so I will do a proper search tomorrow. I do take the point about the ariel, it doesn't seem to make any difference if it's attached or not. I will take a look Thanks Clive

If by "update" you mean "replace with a new scanner", then yes. The
new version is the PRO-97.

> I saw a new version of it in Radio Shack a few days ago. All the

If, in fact, you're referring to the PRO-97, the changes are far
from cosmetic:

* LTR trunking added
* CTCSS/DCS added
* 150 talk groups/bank vs. 100
* "Signal Stalker" added
* Added NWS FIPS/SAME mode
* Step sizes for various frequency ranges changed (e.g. 8.333 kHz
between 108 and 137 MHz).
* Added 225-406 MHz
* Increased sensitivity in 216-225 MHz

I'm using a Diamond discone antenna (with max 10meter quality cable, such as aircell) but an antenna more specific for APT reception would be much better.
You could make one yourself to save some money, there's a lot of good info on the net.
If you want to use both antennas, don't use an antenna splitter, this will reduce the signal strenght.

With the program Orbitron (to predict satellite passes, with DDE option) and WXsat to decode the signals. I'm experimenting with WXtoIMG but I find this more difficult to setup. You can also fine-tune the pcr with factory software (EX-2099), but it can wreck your receiver......make sure that you've got a backup copy of your EEPROM before experimenting (unique settings for each receiver). It takes a signal generator, millivoltmeter and oscilloscope to fine-tune the pcr.

An amplifier indeed increases your weak signals, but it also increases the noise in strong signals. Noaa signals are strong enough to recieve them without one.
The optional DSP unit only has advantage in the lower frequencies.

After a lot of patience, testing and adjusting my results are very good, sometimes I've got a very good signal, starting at a 10 degree angle.

Sanchez.

Yea, I've got 2 43's, 2 34's, and 2 60's, not to mention several others BUT having alpha tags would be great. I have others with alpha/computer capabilties so I guess I don't need a 95...

I use WXtoImg, works very well, a terriffic assortment of enhancements available. I also built a crossed dipole antenna. Like already said, 50khz bandwidth, and FM mode. I also have decent results with my discone antenna.

Greetings Clive! I believe what Mike was referring to is that on the inside of your scanner where the antenna comes in you may well find that the connection from the coil or board no longer is connected to the input of the antenna. I have found that the problem on many a scanner others thought were gone. It is an easy fix if that is it in most cases. It people connect and disconnect or jiggle the antenna it can cause them to break the connection. If resoldering is required and you are not into soldering it might be good to get someone to show you how to do it. A glob of loose solder on a circuit board can cause more problems than you now have. Have a great week! Jon.

Jon

I will have a look at it over the weekend. Luckily I am good at
soldering as I repair wristwatches as a hobby and some of these are
quartz that need circuits resoldering I am lucky enough to have a small
workshop with all facilities to do this, I will keep my fingers crossed
and post my findings. I really appreciate the help from the group.
Cheers Clive

Geez, that's not much of a close-out price, though. I bought mine on sale for $149 a couple of years ago. At half that price, they'd be a reasonable close-out deal.

Keeping things in perspective, the price of the PRO-95 has gradually been lowered over it's lifetime. As I recall, when it was first introduced, it was around $300.00. It's a lot of scanner for $129.99.

It's called supply and demand. If they sell well for $130.00 they will sell
them for that. If sales slow, and they have lot's of them in the pipeline,
the price will drop.

perhaps the MM should have used radios in different frequency bands
150mhz, 450mhz, and 800mhz or 900mhz this would have made it more
difficult to jam, Whoever may be able to jam a small band eaiser than jam
frequencies
in the 150, 450, 800, or 900 mhz areas all at once....

I have the air-8200 as well as an air-1000 and an aor-8000

I do like the 8200.....if it does not detect analong/voice on a frequency it will move on rather than staying parked there....also ther ar ethe optional expansion cards availalbe. bought mine from a radio place in the UK, I am in Arizona-usa

I would say it's one of the all time greats, and I've had a hell of a lot of handhelds. To be honest, I have a 93, not a lot of difference. I have programmed about a half dozen of 95s for people and they all worked great.

I'm not sure what could really be better, except maybe freq coverage.

I've used mine daily ever since I got it.

It'll take me probably another month to teach my new Icom IC-R20 all I
want it to know, but even when I get done with it, I'll run it at the
same time as my PRO-95.

I am really loving the IC-R20, btw. I'll write a more detailed review
after I've used it for a while, but so far it's just a joy to use.

OK I HAVE A RADIO SHACK PRO-2067 MULTI-SYSTEM TRUNKING SCANNER AND I HAVE BANK 0 SETUP FOR AND EDACS SYSTEM FOR WORK.

EDACS

BANK 0
CH 00 - NO FREQ
CH 01 - 812.81250
CH 02 - 813.81250
CH 03 - 857.81250
CH 04 - 858.81250

THE RADIOS AT WORK SHOW A RANGE OF NUMBERS, 4 DIGIT
DISPATCH IS 3601, 3911
PORT. RADIOS ARE 3900-3999

ARE THE RADIO ID'S THE TALK GROUPS, IF SO HOW CAN THAT BE PUT INTO THE SCANNER.... IT WONT EXCEPT ANYTHING ABOVE 2047.

I KNOW IT IS AN EDACS SYSTEM BUT I'M NOT PICKING UP ANYTHING. IF I HAVE IT SET AT LTR IS PICKS UP BITS AND PIECES.

ANY IDEAS?

This is certainly wrong for listening on a scanner if you are in the US.
You should only put in the repeater outpur freq (which include the 857 and
858 freq above but not the 812 and 813 freqs). There are probably more
freqs that you should have programmed in. What system (location and
agency/company) are you trying to listen to? If you tell us that, we might
be able to say which freq should be programmed in.

"Just because YOU don't know how anonymous remailers work, doesn't mean everybody else does, imbecile." Roger Wiseman

"pompousity" Oops! Darn that keyboard, anyway!

"suergery" That is Devry for ya.

"aditting" Darn those typos!

"abckpedals" His greasy hair got in his eyes again

"shreeched" Wasn't he the guy in a sit com? Screech?

"stuid" Pot calling the kettle black?

"heared" That's West Virginia for heard.

"assuslted" Rog just makes em' up as he goes along.

"experieince" Oh, DUH!

"abouve" Is this a French word?

"Cosast" Some place by a body of water?

"mebership", Just a typo, right?

"retqards" Regards or Retards? Who can tell?

"coordinbator" Huh?

"Realy" Really?

"Nitoiced" Keyboard error or stupidity?

"Becasue" Well...

"Licence" Roger had to test twice for his license.

"Convienince"

"Myabe" Or then again, maybe not.

"occurance" Say what?

"srtuggling"

"definatrely"

"delapidated" What a dufus.

"picutre"

"permenatly" Ebonics again?

"Arest" You need a rest, Wogie.

"Sentenceing" No comment.

"Narcotices" What?

"Undre" Is this a city in Germany?

"Surgeoun" And this would be?

"Commuications" Who is laughing at who?

"Ovre" Ovre and out!

"Wondreful" It's a "wondreful" day in the neighborhood?

"Derivitave" Still no spell-checker, eh?

"You lose, shit for brians." Woger showing who real loser is.

"Deisowned" Deis what?

"Deeppest" Roger strikes again.

"Dodgeing". Is he talking about a car?

"Staedy" Steady?

"Linme" Transmission line?

"Getr" Nobody knows.

"Experieince" Wogie is good, ain't he?

"Appropiate" What kind of opiate?

"Laywer" Lay what?

"Visitpors" You never have any, ergo you don't know how to spell it.

"It's "complaintant," you sniveling weasel." (Roger Wiseman on spelling complainant.)

"Irreevant" Good going, Wogie.

"Forwared" Forward HO!

"Glady" Glad Bags?

"Neighborhod" It's a wonderful day in Wogie's neighborhood.

"Mena" Mean? What you mean, Wogie?

"Notr" Not?

"Sassifyed" ALA Rolling Stones.No Sassifaction..

"Fantasises" That is "fantasizes", Wussman.

"Illarate" West BY GOD Virginny!

"Reveresed" Must be one of those off-brand keyboards.

"Soem".as in Some? What a loser.

"VIRIN".What Wogie was before he met the Lavender Lads.

"Minisule".he mussa meant miniscule. Like his IQ.

"Champoin".Whassup, Wiseman? No dictionaries in the mental ward?

"Anoinymous"...a cross between anonymous and annoying?

"Acident" Roger's mom got preggers by accident.

"Alreaedy" Alright, already!

"Amouints" Roger amounts to nothing.

"Aposterphe" This guy is a hoot, ain't he?

"Basios"...word Woger uses when he gets neeeerrrrvous.
"Behing"...a cross between being and behind?

"Coiward" As in peeking from behind his mommy's curtains.
"Feamle"...I think he meant female.
"Losser"...only loser Roger can do it better.
"Ignroant"...typical, considering the source.
"Sluprs"...only Rogie knows what this means.
"Travelled"...a Rogerism, replete with ignorance.
"Postss"...pssst...Roger..that should be Posts.
"Defgenerate"...well, it's Roger's word...
"Faity"...he meant to say Fairy, but you know Roger.

"Ghet" Get a load of Curtain Boy!
"Distribiution"...Roger likes using phonics.
"Biotch"...he meant Bitch, but his phonics took over again.
"Methjadone"...a West Virginia substitute for Heroin.
"Sumbliminal"...one of Roger's favorites.
"Recepticle"...either of Roger's moist cavaties.
"Cociane"...a West Virginia drug of choice?
"Tiome"...Roger meant to say Time...but his fingers were numb.
"Beraking"...no definition. Could mean 'beraking' the leaves,
"Amny"...he meant 'any',
"Nlay"...a town in Maylaysia? Vermont?
"Al;ong"...only Wussman knows what this means.
"Becasu"...well, becasu Roger is not the brightest bulb on the tree.
"Seperation". Why? Because Roger cannot "seperate" from his mommie!
"Sisnce" He meant Since, but his pudgy little fingers slipped off the keys.
"gnetically" What?
"provce" (prove?)
"Piuzza" (West Virginia Pizza)
"Schol" (school?)

"strill" (still?)
"shoitgun" 12 ga or 20 ga?
"Snoip" (How they spell "snip" in Glen Dale)
"Maturbater". Wiseman does it all the time, he just can't spell it.(leaves a sticky residue on his right hand)
"Coskscuking". It's a Roger thing, as in Lavender Lads.
"Waddleing". Only in Glen Dale, eh?
"Spaeaking". Curtain Boy did this after his second retest.

" Stgop" Roger's version of Stop.

"Fahter's" He meant Father's Day.

"fserting"..would that be festering?

"poists". Roger meant "posts".

"snadwich" As in peanut butter and jelly?

"regualr" Glen Dale rendition of "regular".

"aftrer" After? Aftrer what?

"soory". Sorry Roger fucks up again.

"didnb't" He didn't?

"whoile". He ate the whoile thing?

"Woamn" He's hooked on West Virginia phonics, all right.

"prrof" And he kin prove it, too.

"beforfe" Was that before he lurned to spell?

"yoiuy" Roger's version of "y'all".

"illerate" Only illiterate Roger can spell like this.

"haeart" Aw, how heartless of me to laugh!

"valule" Roger has no values. No wonder he can't spell it.

"proch" Doesn't everyone have one on their house?

"inmstitution" Where Roger's mom put him in June 1999.

"timne" It's Howdy Doody time?

"whgo" What? Who dat?

"gnetically" Only Roger knows what this one means.

"crfy" Like, cry, Roger, cry.

"stutrtering" Some stutter, Wiseman stutrters.

"Whjere" Where is Curtain Boy?

"Webiste" That's Website to the rest of us.

"Youire" Your? You're? Who knows.

"fiored" As in fired?

"Parety" Roger gave a party once. Nobody came.

"Bouynce" Bounce?

"Varification" Verifiable mental case.

"Probelms" Poor Rogie.has many problems of the mental sort.

"Partricipate" Oh, DUH!!!!

"Cryed" Gee, Wogie..cry me a river.you dolt!

"Stoick" What a dork. His old 386 has no spell check program.

"Partiall" More WV Phonics, I see.

"Obsucred" Either obscured or Rogie has "sucre" on his mind.

"Infinate" Stupid. Think finite, Rogie.

"Sustinance" As in Sustenance?

"Juvinile". This is the way Roger likes his boys.

"Piut" Put it where, Rogie?

"Toyus". "Toyus R Us?

"Diminuative". Roger's height.

"Definitely" Definitely

"Percriptions" Say what?

"Credibiliy" More Glen Dale intellect.

"Thsoe" Yet another Glen Dale gaffe.

This idiot needs help!

I am scanning to attempt to locate a lost dog on our ranch with a
tracking collar on it. I do not know the frequency or the dog owner.
I do know the band is 217-218 Mhz. The collars are supposed to beep
about once a second.

I am scanning from 217.000-217.999 Mhz
I am using a 4 element Yagi antenna.
I have programmed an ICOM R8500.
I am sweeping at 10 Hz.
The scan takes about a half an hour.

QUESTION

Should the mode be set for FM, CW or CW Narrow

Thanks!

widest possible (wfm) would be good.

cw at a pinch.
do it in 1kHz or 5kHz steps.
you should find it.

i use hawk bugs and get a range of about 2-3miles even if it's grounded.

WFM is good for general quick 'band spot' local, if i am tracking another
owbers bird
i don't the freq of.

then i go down to CW then CWN when i get closer.

mike

You really don't know what you're talking about. The distributed.net
project just cracked a 64-bit encryption using hundreds of thousands of
computers over several years. You're not going to crack anything with 50
CPUs and two weeks.

Do you know the version of the firmware? Is a manual included?

Thanks,
Bill Crocker

Well it would help to know the exact frequency of the collar beacause they pulse on and off and you will likely miss it during the sweep. Put the receiver in SSB mode with wide IF filter and sweep in 1 KHz steps and sweep manually. Also break the band up into 4 overlapping sweeps so that you can do an exhaustive sweep until you find the frequency. Start with an omni antenna until you find the frequency. A spectrum analyser might be more effective though. This reminds me of a lost dog incident here in Florida. The dogs owner tracked his dog to a large gator, whose stomach contained the dog collar transmitter and collars from other dogs as well.

I also listen to the Michigan State Police (on my Pro 96 in Grand Rapids MI). I've noticed that they still give out a lot of info in the clear (a drug dealer's cell phone number, a DEA agent's phone number, et cetera). There is ONE guy, though, who encrypts EVERY Tx he makes. Based on the things said to him by others before and after he Tx's, this guy has a seriously inflated sense of his own importance - near as I can tell, nothing he says is too out of the ordinary, and the other parts of his conversation (the other troops) are unencrypted anyway. The noise those encrypted Tx's make would be enough to make me give up scanning if a lot of the troops used it!

How the Police, and the Public, are being mislead about Airwave.
An Insider Evaluation of the Propoganda.

I am posting this in a few choice UK newsgroups who have some interest in the police radio system. If you take offence to this then I apologise, but I think you will find what this post contains interesting. At least I hope you do!

Let me be quite clear about a few things first of all. It is the government's fault that police forces have had to switch to Airwave. They have sold off frequencies we have been using for years with no major problems. Do not blame your local police force for buying into duff technology, they had little choice in the matter. And for those of you who might read the items below and say 'purely teething problems', then let me say this: We are something like the 38th Force to go live with Airwave. o2 have had 37 previous installations to make their cock ups and learn by them. Our Force has also been using Airwave (in a testing capacity) for well over a year, and live for 6 months in some areas. NONE of the technical problems raised time and time and time again have been fixed during any of this.

Our communication equipment provider for control rooms also appears to be totally inept when it comes to getting the data-display side of things working. The 'last officer calling' function, whereby their callsign and warrant number is displayed in the talk-group button on the system is wiped out and replaced with either a blank space or gibberish the moment the controller transmits. The 'subscriber' screen - a utility on the control system that shows which officers are on a particular talkgroup, also fails to function correctly. Those who are off duty do not 'fall off' the display, meaning that there is around 50 pages of 'subscribers' on any talkgroup, most of them off duty. Very useful! There are hundreds of other minor problems as well, but the discussion of them is not the purpose of this post. It is merely to cut through the propoganda being issued by the Government, O2 and probably your local force about how peachy everything is. It isn't.

"What are the benefits of Airwave?"

o) Greatly improved coverage throughout <force>

This is a mixed bag. I have personally witnessed communications being crystal clear in the depths of town x (read: middle of nowhere where previously neither UHF or VHF could penetrate), yet o2 appears completely unable to give us a clear signal outside <Major University>,

just yards from the <major county motorway> for which <force> Police, along with all other major A roads in the county, have contracted for 100% coverage. Reception is also piss poor in <major> City centre, <major> city centre, <major> city centre, <major> city centre and <major> city centre. If by 'coverage' they mean the ability to transmit something - anything! - then yes it has improved. I thought the point of 'communication' was being able to be understood when trying to transmit though.

o) voice clarity and an end to background noise

This partly goes hand in hand with the last entry. Voice is anything but clear. When in the control room I have my headset volume up to 120% on the touch-screen control equipment, and also have the built-in headset volume control set to 3 (max), and I still struggle to hear what anyone is saying the majority of the time. There appears to be a total lack of bandwidth available for clear voice communications, compounded by the effects of lack of coverage. It is essentially like the early days of Internet telephones, were 2 people across the world were attempting to communicate via 2400baud modems. It simply didn't work. The noise cancelling was sold to us to also be a major advantage. Why is it then that as soon as the officer turns on the sirens, I can't hear a bloody thing they are saying? The moment they step into a busy pub/club, all I can hear is music and background chatter. This feature doesn't work either. And for the cynics, regarding the volume - no I am not deaf. Switching back to UHF I car hear them fine.

o) secure encrypted comms that prevent scanning of police transmissions

Granted, the system is secure and encrypted. It also works quite fast. Most of the time. However this does mean that while the criminals can't listen in to transmissions, neither can anyone else. I know that in the past I have assisted the police when off duty by phoning in seeing a 'suspicious male' hanging around or hiding somewhere based purely on the description given out over the air by controllers a few moments earlier. We as a police service have now automatically excluded this unauthorised - but none the less appreciated - help. In an even more indirect fashion listening to 'force' transmissions on VHF, I have avoided accidents that have just happened, reducing the burden on the service either trying to attend, or who end up dealing with the resulting backlog of traffic. The same accident then appeared on my FM car radio via Traffic Announce about 20 minutes later. The end result was I also managed to get to work on time.

o) digital comms that will enable staff to communicate by radio by phone or by text

I won't discuss the radio element (radio as we mostly know it, e.g. broadcast or All Informed transmissions) as I think it covered well above. However the telephone element is fine, except that officers can only phone OUT from the handsets. For a maximum of 10 minutes. They cannot receive incoming *telephone* calls from anywhere, except

Superintendants and control room staff. Useful. Text? Don't make me laugh.. if you saw how complicated it was to actually COMMUNICATE via text message, you wouldn't bother either. It isn't as simple as just write and send. If you want to send it to someone in the control room it is even worse. It is a system that will never be used, despite us being in the 'text generation' due to its complexity and high failure rate. Point to Point communications, e.g. using the radio as a radio, but for a private call between only two individuals works well providing there is no one transmitting on the main talkgroup. In a busy division like say <busy division>, there is rarely any point during the day where there isn't traffic on the main talkgroup, thereby rendering this otherwise useful service, totally useless. It is made even worse by controllers being told that they MUST NOT authorise talkthru on the main talkgroup. Great... so how do we communicate then? Oh.. I know.. back to personal mobiles it is then.

o) access to local and national databases

Oh? Where? I do not have access to PNC, local intelligence, or any other kind of database from my handset. My 'access to local and national databases' is as it ever was. Ask comms, go back to the car and use the MDT, or waste even more time and go back to the station.

o) introduction of emergency button that will improve officer safety

Yes.. when it works. Numerous times officers have pressed their emergency button only to be told 'call failed', or 'no coverage' or on pressing it for the required two seconds, find it doesn't fire because someone in comms happens to be talking at the time (Yes comms staff have a higher transmission priority than the emergency button!). How is it then that this will improve officer safety? I can't even hit people with my radio anymore if needs be, as the thing will shatter in to a million pieces. In UHF/VHF days I could scream 'HELP!' even if someone was talking. The controller would have a hard time trying to hear me over the other person when I gave details, but at least it was possible. With Airwave I just get 'BUSY' if I try and transmit, and end up in a queueing system. But of course, this improves officer safety. As a side note, when you are getting your head kicked in, have you any idea how long 2 seconds is...? The button is also extremely hard to push in and keep pushed in, all while trying to defend yourself.

o) Improved communications will mean officers can be deployed to calls more speedily.

If anything I have described above can be seen as 'improved', then you need to seek help immediately. There was never a problem deploying officers the old way. The majority of the time VHF/UHF worked fine, or as a last resort sending the job to the car MDT.

o) Staff will be able to access information regarding incidents, people or vehicles directly through their Airwave radios.

Yes, we can retrieve some information regarding incidents, but it is via text message, which we need to send first to request. It is a convoluted process and by the time we have finished typing out the request text message (which contains a lot of special characters like #), we'll probably be there. I cannot access any information regarding people or vehicles directly via by handset. I suspect when we are finally able to it will be via the same method, e.g. text, and will be quicker to call the PNC desk and ask. Text messages are also limited to 120 characters. Not very useful at all. The last two sentences consisted of 73 characters...

o) Improved communications will mean less time in the police station and more time on the streets.

Pure propoganda and an attempt to justify the 2.3 billion pound price tag for the system. How improving communication will result in me spending less time in the police station is a mystery. Is there a feature of Airwave that automatically completes my paperwork for me? Please tell me! I will gladly use it no matter how complex.

o) The ability to communicate directly with other forces and other emergency services.

Neither my county's fire or ambulance services subscribe to airwave. I can chat to <neighbouring forces> if I want to, but the only force I personally border with the majority of the time is a big expanse of water.. so no advantage there.

o) "Our colleagues in other forces are already catching more criminals as a result of using Airwaves digital technology."

One word. Tripe! Airwave offers nothing in effect - due to the technical problems - that MASC or similar technologies doesn't offer already. Pure propoganda again.

Yes this is a humerous, but none-the-less serious look at the state of play in todays police radio service. Don't flame me for my comments and points of view. I'm sure if you speak to other officers of any number of forces, you will get a similar view point.

If you got this far, congratulations and thanks for reading. The next time someone in authority mentions airwave to you, perhaps you'll remember this post and be able to raise a few points with them. It should be an interesting conversation... that is, if they decide they want to continue to talk to you at all...

Yours,

PC 5029 Concerned Officer.

Be fair ! Why should it be different from any other government project.

You didn't really think it would work did you ???

Airwave.

<snip>

> Be fair ! Why should it be different from any other government
project.

Of course, why should it be. But on the flip side of this, some Government-sponsored systems work wonderfully. Radio and mobile telephone technology is nothing new, and all airwave has done, really, is throw encryption into the mix and make minor changes to the mobile telephone model. What is so hard here?

> You didn't really think it would work did you ???

Considering they spent £2.3bn (and counting!) on the system, I would have hoped it to work slightly better than the quality I can get out of two tin cans and a piece of string. Sad, really.

Cheers,

PC A.N. Other.

I suppose that this reads rather like an episode of Fawlty Towers only without the funny side. Having said that, it's great that someone is honest. The mention of the emergency button is perhaps the most revealing point - yes two seconds is far too long to wait and is not exactly instant! And three guesses as to why the fire and ambulance services have not subscribed - and probably won't. So much for interoperability.
And trying to give out an assurance of 100% coverage countrywide is about as convincing as the assurance that the Titanic was unsinkable. No fancy digital technology can change the laws of physics, making RF able to penetrate a Faraday cage (aliases include steel framed buildings, lifts, underground carparks, basements and the occasional remote valley out of 'line of sight' from whereever the nearest base station may be).

I work in the Ambulance service where we have been told TETRA is on the way. Professionally I know a number of emergency services staff at all levels and in a variety of services - police, fire, ambulance - both operational staff and Control Staff. Clearly experiences and opinions are swapped.

I am only too aware of the hype which has been generated by Airwave and the vastly inflated claims being made for it. There is a LOT of dissatisfaction and much concern that it was and is being hastily foisted on us when no proper chance was given to other technologies.

One day there will hopefully be - at the very least - a National Audit Office enquiry into how Airwave came to be implemented/forced on emergency services. I feel sure that there will be serious questions to answer.

In the meantime I hope the problems (for problems there certainly are, but being kept quiet) are just teething problems and that they can be sorted.

Hello,

It's crap compared to the old wide area encrypted network I used. Everyone could hear each other clearly and it didn't break up. It had the occasional UHF fluttering effect if in a difficult area, but nothing mad. o2-AIRWAVE was over budget and you should see the contract!
The data side of it doesn't work, so no sending in reports. The pictures do not work, so no pictures of suspects, the fingerprint scanning doesn't work and people are told not to use it to speak privately or for "phone" because it slows the system down.

It was a great idea on paper, but put it in the hands of people with a degree (worthless piece of paper) with NO practical experience or common sense and it falls apart.

All o2-Airwave is good for is voice comms, but only in the areas contracted and agreed will have coverage. In a way planning permission was obtained almost by force to provide comms in some areas as the project was already agreed to. So it was another way of getting unrelated base stations and aerials onto the same sites.

In Merseyside and Cheshire the system is worse than normal radios.

<snip>

> Be fair ! Why should it be different from any other government
project.

Of course, why should it be. But on the flip side of this, some
Government-sponsored systems work wonderfully. Radio and mobile
telephone technology is nothing new, and all airwave has done, really,
is throw encryption into the mix and make minor changes to the mobile
telephone model. What is so hard here?

> You didn't really think it would work did you ???

Considering they spent £2.3bn (and counting!) on the system, I would
have hoped it to work slightly better than the quality I can get out of
two tin cans and a piece of string. Sad, really.

Cheers,

PC A.N. Other.

Hello,

Cheshire already had encryption for years, it was the MASC system from
Marconi and it worked VERY well. It was a repeater system covering the
entire area so everyone was on "talkthrough". No silly pips all the time,
people could hear every other person. Last time I looked it was on
£2.9billion for Airwave.
Cheshire never suffered the same as Merseyside - they were never blocked out
on channels, even 22VHF that the patrols used as a chat channel between them
when they should have been monitoring CH2. No one could listen in either,
so why spend all that money on a system that is reinventing old ideas - was
not fully tested and doesn't work correctly.
Has your control room also mentioned that the radios have GPS built in, so
they can see EXACTLY where each patrol is on a map on the PC? That's why
pushing the emergency button shows them which patrol is calling and where

they are! So each PC is being watched.

Hello,

In Merseyside and Cheshire there is NO encryption on Airwave, the fact it is "digital" is thought to be enough to put people off having a go at listening!
A lot of the Motorola handsets had difficulty with the encryption.

Doesn't surprise me.

Though one error on your part. IME these systems are designed by
consultants, not technical people. Good technical people are well aware
that new tech. is , shall we say, unreliable. There is a phrase KISS, keep
it simple, stupid.

The latest one is these ID cards. Whatever the rights & wrongs, they are
making huge claims for the tech. which no-one I know of thinks will work !

Consultants and Bureaucrats like it because it's new snazzy and expensive,
and they can make flashy PR announcements.

As a cop equivalent ; one half expects our BiB to be given Palm Pilots or
something to write their notes up on, simply because it's a flashy gadget.
Simple things, like in this case a notebook, work.

Well, why *doesn't* it work ? Why can't the police hang on to the mobile
networks ? I don't know, no-one does.

If all it is is encrypted mobile phone stuff (?) then you should be able
to do it with a reprogrammed cheapie handset.

There is no reason why it shouldn't work ; there isn't, (relative to say
moiles) that much traffic !

If it works ... according to the OP (whom I presume is a copper), it
doesn't work. What use is an emergency system if you can't call for help.....

As another police airwave user I have to say it is an utterly shite system.

Officer safety IS being compromised.

Airwave drops out completely on a regular basis in the control rooms, the 'hang time' to transmit is as long as EIGHT seconds sometimes - utterly useless during a pursuit or something. The BUSY message is almost permantently on and it is just NOT designed for busy areas on a Fri/Sat night with lots of officers using it.

Do they expect us to f**ing run down the street texting on the damn thing to get updates?

The sooner the Federation and Unison or whoever the lazy arse reps are, get together and thrash it out with the Chief Constables - the sooner officers can start seeing improvements and have confidence in the system.

Greetings,

I'm a PC in the Met, and a few months ago went from Borough to the Transport Operational Command Unit (TOCU), a Pan London unit of the Metropolitan Police Service. The standard radio for the TOCU is the airwave system, and I was issued a new Motorola handset accordingly. However, all BOCUs (Borough Operation Command Units, the new jobspeak for divisions) operate on the old Metradio system, which is 100% incompatible with Airwave. As such, I currently have to carry 2 radios: an Airwave to talk to my pan-London TOCU control room; and a Metradio to talk to local stations in order to respond to divisional shouts, request cell space etc.

I have a number of issues with the new Airwave, beyond the weight issue of carrying 2 radios, which I acknowledge is a consequence of the transitional period:

1) The flimsy design. The Motorola actually rattles when it's shaken, and is about as robust as an old mobile phone. A sergeant at my base recently had his old Metradio run over by a car and the carrier (a long wheel base Mercedes Sprinter van), and apart from scratches, it works as well as before. Considering the back falls of my radio regularly, and the battery unclips with a jolt (such as running!), I doubt the new radio will be anything like as solid as the old system.

2) Attachment. The Airwave system used attaches to a clip on the fabric loop of my outer clothing, and doesn't have a remote mike (in the old days known as a PSM, public safety microphone). What this means is that there is only a couple of grams of cotton thread between me and the loss of my radio. Even the old Storno was securely clipped to my belt with a remote microphone, and in a tussle I could rely on it staying on my belt, albeit with the microphone dangling loose. With very little effort my new radio could be sent into the yonder.

3) Microphone quality/position. The microphone of the airwave radio is badly positioned. If pressing the PTT (Press To Talk Button) of the new Airwave whilst it is attached to uniform, it is basically impossible not to cover the speaker with your hand whilst talking. The PTT is at top right, and the microphone is bottom left, and holding down effectively occludes the microphone with your palm. It is almost impossible to talk into the radio with it clipped to clothing, and most officers have to remove it and chat

into it like a mobile phone. This means that one swipe would send the radio flying. OST (Officer Safety Training) dictates that radios should never be held loose in the hand; with the new Airwave, it is the only way to talk.

4) Radiation. This is a subject I am talking on based on canteen gossip rather then personal experience, and I apologise in advance for any inaccuracies. Rumour has it that the handset releases far more radition then a mobile phone, with the widely reported brain frying consequences.

Beyond the above problems, reception is poor, the microphone seems to pick up background noise better then direct speech, and it is a wasted oppurtunity. The trial was advertised as having the ability to send photo messages with wanted pictures, but the handset issued is a low resolution black and white LCD screen, with no such facility. All in all, the technology that the Home Office is investing billions in seems outdated before it is introduced.

I would like to think that the problems listed will be ironed out, but I doubt it. The Met has not fully installed MDTs (Mobile Data Terminals) in patrol vehicles, about 20 years after America (watch The Blues Brothers, the SCHMARDS system they illustrated was fully operational in the mid 80's), and in terms of directional guidance is several generations behind those of the RSPCA (about 6 months ago I went in an RSPCA van for an arrest, and was amazed how in advance of the Met they were). The new radio system seems to be a throw back to early 90's mobile phone technology, and misses the chance to bring police communications into the 21st century. I can only hope that the system being trialled is rejected, and something approaching modern technology is introduced.

What's a good simple scanner for VHF and UHF?

Let me clarify that. I used to have a Radio Shack Pro 2006 scanner. Whenever I got around to using it I couldn't figure it out and had to read the manual again.

I'd like to be able to turn it on and just enter a frequency, period. A tuning knob for the VFO would be nice too, so I could easily search around. This feature is more common on a communications receiver, which is maybe what I need. But I don't see any reason why a scanner couldn't have a knob too.

It doesn't need to have a gazillion memories, ten would be fine. And it would be nice if the memories could be labelled (alphabetic). It should not have an internal lithium battery (for the memory) that dies every five years, unless it's easily replaced (not soldered on to the circuit board).

And lastly, it doesn't need to be a new current model. It could be twenty years old, so long as it has a good solid circuits.

Does anyone have recommendations?

Thanks for your help.

I'm in East Anglia and Airwaves is constantly down, crashing out of reach
etc. Due to being a rural area the shortage of masts causes a constant
switching of airwaves back to VK. There is no data facility as far as I am
aware and the only time Airwaves is actually used is in localised incident
scenarios.

yes your not only one carrying 2 sets BTP in london LUL division also carry one vhf set and an AIRWAVE as yet no AIRWAVE is working underground

also i have heard one recent incindent of many no doubt

4 officers went into a public toilet down some stairs on a station,a railway workers analgoue radio worked ok,the AIRWAVE lost it,thats no good if an offcier gets called to a location qand cant call for urgent assistance.

as for Metro lima TOCU units yes the system uses all the old traffic talkgroups and also some other talkgrpoups in METRADIO trunking network plus as you say AIRWAVE.

but very few in Met use AIRWAVE as yet and its been delayed time and time again and now delayed yet again,specialist squads are better off using there Cougarnet military style secure radios[which can go analogue if needed] they have proved relaible for many years now.

Firearms teams across UK certainly dont like using AIRWAVE on actual operations or siege situations and are preferring to use there old analogue channels,where there single freq back to back is more reliable.

ok speaking as a scanner user ok will be sad to lose my Met police scanning,currently trunk tracking scanners do the job real well,but i also aknowledge some security in both terms of data protection act and doing persons checks and so on,which i have always felt wong to be done on an open channel,and also officer safety there has to be a secure system in use but switchable would be better,go secure if needed,this is perfectly possible

go to an amercian airbase,one minute you hear on there base coms analgouge speeach,then one says "go green" and press of a button coversation is now secure.

thats whats needed,some stuff for public domain as the original post said,some of us scannerists in UK but more so in USA have heleped police in past,full digital then thats all gone.

"Simple" is the key word here. Depends on what you mean when you say you want a "simple" scanner. When you say "simple" and it can be twenty years old, do you mean cheap? If so, don't bother reading anymore.

How about an Icom IC-R8500? It'll do everything you're asking for. That's what I use. Looking for anything else?

It has a direct entry key pad--that enables you to directly enter a frequency. I use this all the time. It also has a tuning knob. So once you enter that frequency directly, you can tune around. It's also very easy to change how fast you want to tune around. Steps are from 10 Hz to 1 Mhz.

Memory? Memory is cheap these days. It has 1000. 20 banks of 40 memory channels each. Plus 20 scan edges and a priority channel. I use three banks. Each bank has a set of frequencies in it grouped the way I want

them. Sure, it has a lot of memory... doesn't mean you have to use them all. By default, it looks like it only has 40 memory channels.

Each memory channel can be labeled with 8 alphanumeric characters. Each bank can be labeled with 8 alphanumeric characters. I don't use this but I can see where it would come in handy sometimes. I like to see the frequency since I don't monitor too many.

Solid circuits? The sensitivity numbers aren't as good as some of the top-of-the-line receivers I've looked at, but they're better than most Radio Shack numbers I've seen. Plus, the numbers by themselves are not complete enough to really compare with other receivers. Personally, I think it's the best scanner on the planet. I can't think of anything I can't make it do. I'd like to hear if anybody else has found an application that this scanner cannot fulfill.

Battery? It does not have one. It uses EEPROM. No need for a battery.

Oh, it does HF also. Lots of neat stuff to listen to on HF. 100 Khz to 832.99999 Mhz, 849.00001 Mhz - 868.99999 Mhz, and 894.00001 Mhz - 1999.99999 Mhz. (Breaks in coverage are Cell Phone frequencies.)

Rumor is, move some surface mount diodes around and it could be 100 Khz - 1999.99999 Mhz. But I have a feeling that it's just a rumor.

Did I mention I personally think this is the best scanner on the planet? But that's just me. One key point people tend to forget is how important your antenna is. It's easy to show that an "el-cheapo" scanner can out-perform a more refined, more expensive scanner depending on where you put the bent coat hanger and the ground-plane or yagi up 100 feet.

2053. PRO-2096 vs BC796D, for Mil-Air?

Newsgroup: rec.radio.scanner
Date: 2005-04-25 00:00:36 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <OPydnSKbdJ9Qr_HfRVn-rw@comcast.com>
Source record: 13714

How does the Radio Shack (GRE) PRO-2096, when modified via software to open up military air, compare to the Uniden BC796D, for monitoring Mil-Air?

I have read that Mil-Air was left out, on the PRO-2096, due to sensitivity issues, and that GRE did not want to include it in the specs, because it's poor performance in this band, might hurt sales. But I have to wonder if the "sensitivity" issues were more related to our times, and that is may have been suggested to leave that coverage out for political reasons? It would certainly be easier to program it's exclusion, vs. redesigning the radio, and actually blocking it. Have those of you that restored it, found that it performs at an acceptable level? Or would the BC796D be a better choice?

Living in Michigan, having a scanner with "digital" capability has become a necessity. Living very close to Selfridge Air Base, makes having a scanner with Mil-Air capability, an extra bonus. I've owned the BC796D before, and was very satisfied with it, and regret selling it. I've read about the PRO-2096, and talked to one owner, who says it's far superior to the Uniden. So I'm sitting on the fence, trying to decide.

Comments appreciated!

Thanks,
Bill Crocker

How about a Yaesu VR-500? It has a frequency dial, alpha tags (text labels), direct frequency entry and (battery-less) non-volatile memory per your requirements. It does have a gazillion memories, but that generally comes along with the other features you desire.

The Radio Shack PRO-95 may be worth considering, although it doesn't have the frequency dial.

I'm not being rude, but I find difficult to believe that people are seriously considering using texting as a communications system. It's all right if you want to send HOW U DUDE but it's not really useful beyond that.

IMO in the mobile world it's more of an expensive gimmick than anything else.

Are you Cops just being given cheap modified mobile phones ?

Indeed, the new Nokia GPS-enabled terminals
(http://www.nokia.com/nokia/0,,62313,00.html) are slowly replacing our
'old' 880's but they have yet to fix in the system that will show us on
the map. Assuming the emergency button works, it will merely display
the co-ordinates on the screen and the controller will then need to
transpose those details onto the mapping system to bring up a
location... yet more room for errors to creep in. But as I say, that's
assuming the button works at all.

Adam.

Chas thanks for bringing that up, I knew I had forgotten something. The hang time for us can, as you say, creep up towards the 10 second area on busy nights. This is not simply waiting for someone else to get off the air, but purely the time it takes for the system to stop faffing around and give you permission to speak. Of course, whilst waiting for this 'hang' to clear, if comms speak you start the whole damn process all over again. I have actually given up trying to pass a relatively urgent update before now and typed it out on the MDT instead.

> Do they expect us to f**ing run down the street texting on the damn
thing to
> get updates?

I can't get my head around the texting process sitting down let alone running after someone and trying to do it! The process is just too complicated... and I'm no luddite.. I easily get through 300 text messages a month on my private mobile.

> The sooner the Federation and Unison or whoever the lazy arse reps

Call me a cynic but I cannot see the Federation or Unison or whoever actually making any difference. Forces have committed so much time and money on the project that it will be an admission that they cocked up to back down now. It's a similar story with SAP.. if your force uses that poor excuse for a system for time management then you know what I mean...

Adam.

SAP?

Don't get me started on f***** SAP.

Airwave is Son of SAP!

And just as shite! And Airwave is integrated with our SAP. Meanwhile - despite having SAP for nearly THREE years - we are still keeping paper records and only people retiring or resigning have their quota pots made correct.

But back to Airwave - or Shitewave as it is known (amongst other more affectionate terms) our handsets do not have the GPS built into them. Just as well really. From what I understand it makes the sets even bigger and more cumbersome.

Just what you need when trying to press the red button in the midst of a chavvy brawl.

I just bought a Bearcat 210XL 18 channel for $10 and
it works great, easy to program and looks new, it all
depends on what you want to list to, do you need
8010 Mhz? How many channels do you need?

By the way the the pro 2006 is still one of the finest
analog scanners made and often sells for more than
it did retail, I own one and love it.

Good luck,

Patrick

2071. Nu-B Post: Problem scanning Portland, OR

Newsgroup: rec.radio.scanner
Date: 2005-04-26 03:56:56 UTC
From: Shonc182 <shawn.carey@comcast.net>
Message-ID: <IMmdnTOJdOuRIfDfRVn-oQ@comcast.com>
Source record: 13733

I am a novice at scanning to say the least, but I have a BC785D that I listen to police and fire in the Portland, OR metro area. Just recently I am unable to receive City of Portland police or fire. It is a Motorola type II trunked system that I have always listened to.

I can only assume that I have changed some setting in the scanner that does not allow me to scan the ID lists. I can still search and receive the talk groups, but it does not appear to be scanning my ID lists. I use ARC250 software that I program the scanner with, so I went back and reloaded the frequencies and lists, but this did not work. I have other trunked systems in other banks that still receive fine. I have compared the settings for the banks that don't work to the banks that do - they appear to be the same.

Is there something basic I can check? or is it possible that this could be something on the radio system's end? Any help would be greatly appreciated!

2072. New PRO-2051 on sale @ $149.99

Newsgroup: rec.radio.scanner
Date: 2005-04-26 11:36:28 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <r5idnRlU_pYguvPfRVn-qA@comcast.com>
Source record: 13734

Radio Shack has put their new PRO-2051 (Cat #20-426) Triple-Trunking base/mobile scanner on sale, at $149.99. That's $50.00 off the MSRP. Like the new PRO-97 (Cat #20-527) hand-held, although they do not have "Digital" capability, it is an interesting scanner, with some unique features. It should be noted however, the PRO-2051 does not cover Mil-Air, whereas the PRO-97 hand-held does! The PRO-2051 is a Uniden creation, and the PRO-97 is a GRE manufactured scanner.

I had a PRO-2051 for a few days, and found it to be a very nice scanner. However, I returned it, for the PRO-2096 with digital capability, but at over three times the price!

==========

I guess that cheap is also one of my objectives.

My Yaesu VX-2R HT does everything I need. But I want something for the desktop. It will not be used mobile.

The closest thing I've found so far is the Uniden BC898T, and its predecessor. However I've never had a chance to play with this radio.

and all because the Gov didn't want to share a network.

For at least the last 5 years, Scandinavian countries use GSM Pro,
which has secure Push To Talk closed network groups on the existing
900MHz GSM phone networks, using cheap rugged GSM Pro PTT
phones like the Ericsson R250, which now sell for under 100 quid.

Used with Sims that have high network priority allocated to them,
so if a cell is full, it kicks off lower priority users to force a connection.

and as we all know UK 900MHz GSM coverage is extensive and reliable.

The cost of the whole upgrade to GSM Pro instead of Tetra airwave
could have been measured in thousands rather than billions of pounds.
So of course the Blairites had to reinvent the wheel and make it of gold,
why not, they aren't paying for it

It was a political decision after Tony was deeply embarrassed by his
police security talking about their location when he was out with Dubbya,
completely compromising Dubbyas accompanying security.
(the US secret service have used encoded radios since the 1960s)

When Tony found out all and sundry were listening in to his security,
he ordered a new secure system be implemented ASAP, cost no object.

O2 rubbed their hands with glee, and muttered the infamous word "Tetra"

If by c-phone, you mean CELL PHONES, 99.9% of all c-phones are DIGITAL. The 800 doesn't do digital. Some c-phone services are still analog and I have heard a few now and then. You only hear one side of the conversation. If you had a digital scanner that didn't have the forbidden frequencies blocked, you wouldn't hear anything anyway as the signals are encrypted. All in all, it's a pretty boring and MOSTLY illegal endeavor...

Where an analogue trunked system would do about all thats needed and is
proven and costs less, but hey!, its got to be digital like that pox
known as DAB which sounds worse than FM;((....

2084. FS: *** Uniden Bearcat BC60XLT Scanner ***

Newsgroup: rec.radio.scanner
Date: 2005-04-27 08:28:50 UTC
From: Pete <peter_neidhardt@hotmail.com>
Message-ID: <udiu61l9lh51u05vqetb80ti9k0vbdqor0@4ax.com>
Source record: 13746

PRODUCT:

Virtually unused Uniden Bearcat Scanner for sale. I won this 2 years ago at a communications trade show and haven't had a big need for this since. Used only a few times. DOes provide good fun in listening to POLICE, EMS, FIRE as well MILITARY frequencies in most regions

*** a few pictures are attached ***

PRICE: $49 CDN

LOCATION: Toronto, Ontario

CONDITION:

It is in excellent shape, no nicks, virtually brand new!!! Includes the ac adapter, detachable antenna and the scanner unit itself.

PRODUCT FEATURE LIST

* 10 Band Coverage

* 30 Channels

* Built-in Scan Delay

* Full-Frequency LCD Display

* Programmable Chain Search

* One Touch Weather

* Track Tuning

* AC or DC Operation

* 3 Day Memory Backup

* Channel Lockout

* Keypad Lock Feature

* Low Battery Indicator

* Manual Channel Access

* Priority Function

You can store up to 30 different frequencies and can scan 10 different bands including 10 Meter Ham, Low Band, 6 Meter Ham, Military, 2 Meter Ham, High Band, Federal Gov, 70 cm Ham, UHF Band, and "T" Band. It

uses 4 AA batteries and can use rechargeable batteries if you desire.
It also has a belt clip on the back for easy carrying.

Frequency Range: 29.0ï¿½29.7 MHz 10 Meter Amateur Band

29.7-50 MHz VHF Low Band
50-54 MHz 6 Meter Amateur Band
137-144 MHz Military Land Mobile
144-148 MHz 2 Meter Amateur Band
148-174 MHz VHF High Band

Above bands in 5 kHz steps

406-420 MHz Federal Government
420-450 MHz 70 cm Amateur Band
450-470 MHz UHF Standard Band
470-512 MHz UHF "T" Band
Above bands in 12.5 kHz steps

COMPANY WEBSITE:

http://www.uniden.com/productpop/00_productpop.cfm?prd_code=BC60XLT-1

SHIPPING:

* Purchaser pays shipping, will make arrangments once purchased.
* Will ship to the US and within Canada
* Local Pickup available

Whenever I have been in town and an officer has been using an airwave radio he/she always appears to be struggling to hear what is being said. With the old analogue motorolas they always were belting out the audio so everyone could hear. Is this another fault of airwave? BTW Sepura radios are what they are using round here.
Melv

Hi Dan:

It's probably not a good idea to attach your name, and email address to a message related to illegal activity. That being said, save your money. The BC800-XLT is a very old scanner, with minimal features, and performance, by today's standards. It's solder joints are probably beginning to fail, as well as capacitors, with age. In addition to that, although it does cover the portion of the spectrum you mention, I don't believe the stepping rate is correct for the cellular band. So it would be hit, and miss, at best, skipping a lot of channels, and possibly not performing very well on the ones it does find. As the other post mentions, the majority of cell phones are no longer analog, and have moved to digital, and you would not be able to receive the digital ones at all. If you did accomplish your task, you'd find the novelty to wear off fast. If you want to listen to people bitch at each other, work in an office! LOL!!!

There is a simple reason for it. I believe in Germany the data rate used is 256Kb/s? In the UK the regulatory body, Ofcom (or it may have been its predecessor the Radiocommunications Agency) issued an advice to broadcasters that the lowest acceptable data rate should be 128Kb/s, so what happened? Correct, they all moved to 128Kb/s (or less in mono.) Before this many were at 160Kb and several were at 192Kb. Now there is only one, BBC R3 (the classical station) that transmits at 192Kb (or 160Kb during busy periods) and Classic FM (the commercial classical station) that uses 160Kb at all times.

There are rumours around that Ofcom are to change their guidance to 'not lower than 112Kb/s' sometime soon. Heaven helps us if they do! In the UK it's all about quantity - quality doesn't even get a look in.

We have here 160 or more, just the traffic announcement program uses
64 kbit/sec, sounding like AM.

You almost gave me a heart-attack. My friend owns and operates
the local shack, and it's a flagship store. I thought you were
going to say the chain was in liquidation or something!

I will miss the old Radio Shack name fore sure, i have great
childhood associations with theoutlet. ah well, life goes on
and so do the radiowaves

It'll happen over there. Just give it time:!.

Plus the joys of tandem coding etc..

BTW is Bayern Klassik 4 still transmitting at 256 K on DAB it sounds
super on satellite:))....

This is not just Canada. A friend of mine in middle management
for a region has told me that within a few years there will only be
one RS store per major metro area, maybe two for big areas with
lots of suburbs like Boston, Chicago, NYC, LA, but those will be
the exceptions. 1 store in Minneapolis, 1 in Richmond VA, 1
in Miami, etc.

They will be doing most of their stuff through the web and by phone.

Frankly who cares anymore, they carry so little, try to get a good resister
or diode and you are SOL.

Idiot!

More than 900 Canadian electronics stores to become
THE SOURCE BY CIRCUIT CITY

Richmond, Va. and Barrie, ON, April 27, 2005 - Circuit City Stores, Inc. and InterTAN Canada Ltd. today announced that on or before June 30, 2005, all stores currently operated by InterTAN Canada Ltd. under license from RadioShack Corporation will be re-branded as THE SOURCE BY CIRCUIT CITY. The introduction of THE SOURCE BY CIRCUIT CITY stores begins today with the unveiling of the Toronto Eaton Centre location.

"Ninety percent of all Canadians live within a 10-minute drive to one of our locations. By June 30, THE SOURCE BY CIRCUIT CITY will have the same national coverage," said Brian Levy, president and chief executive officer of InterTAN Canada Ltd. "Customers will continue to see quality, national and international electronics brands as well as an emphasis on personal and portable devices."

THE SOURCE BY CIRCUIT CITY will be the local destination for personal electronics such as MP3 players, digital cameras, LCD TVs and a broad selection of personal and portable consumer electronics. THE SOURCE BY CIRCUIT CITY will also offer a diverse mix of communication, computer and household electronic products.

The Eaton Centre store in Toronto is the first location to be re-branded THE SOURCE BY CIRCUIT CITY and will be followed by other locations in the Greater Toronto Area and other major markets. The introduction of THE SOURCE BY CIRCUIT CITY will be supported by a major advertising campaign featuring television and radio commercials as well as print and outdoor advertising.

Thanks to Canadia's truth-in-advertising laws,
it will be renamed Radio Shit.

"Radio Shit: You've got money, we've got pockets."

They dropped their catalog, and their website stinks. That's two for
two. If you can't find it on their website and don't have a catalog to
do phone orders from they might as well lock the doors now.

There is no loss whatsoever if RS just up and disappeared. This seemed evident when they dropped their catalog, and started selling cellphones as their main items.

Radio Shack canada stores (Intertan) still have a catalog... and they still
sell a decent amount of parts.

Radio Shack Canada (sorry, The Source now) is a little more true to their
roots than the USA Radio Shack.

Example, compare these two searches at their respective sites:
(search is for "shortwave")

Canada:
http://makeashorterlink.com/?Y5C425AFA

USA:
http://makeashorterlink.com/?K2D452AFA

Go try reverse-psychology on the lesser minds... or, even on those willing to jump your hoops...

Don't you get enough people who don't like you in the real world--yanno, you might fool them here--if you were but a tad bit brighter....

Either you lacked attention as a child and even negative attention is valued by you--or, else you could have been a spoiled child, and now try in vain to restore unwarranted attention--even to the point of accepting it being paid in the negative sense...

Your mind, tactics, methods and actions are very childlike--of course, you are either unable or unwilling to be able to face that. You may very well be fooling yourself--I don't think you are very successful with others...

While you think others are looking at what your mind sees, and you are running the show--what is really occuring is that others are given a demonstration of how small a man you are (well, unless you are a woman who hasn't completed her sex change yet!)

WAKE UP MAN!!!

I have no experience with the Sepura you mention, but certainly the Nokia's are awful when it comes to clarity. That's clarity from the radio itself, rather than blaming poor signal/too much contention on the talkgroup/aerial site. The Nokia's have volume which goes from 0 (speakers off) to 10 (blown speaker). However the trouble is if the volume is set to 4, you can't hear it with even minor background noise, and if set to 5 or above which is ideally where it needs to be, then it is so distorted you can't make out what is being said anyway. The speaker size when compared to the old Motorola bricks (and no doubt the quality thereof), is piss poor. Nokia make good mobiles. That is what they should stick to; Their radios are crap.

Headsets have been distributed to us, but they are *worse* than the ones you get free with your average Nokia cellphone. One knock and the microphone becomes disloged inside the casing and the end result when transmitting is it sounds like you have your head up your arse. A far better device would be an attachable parrot just like in the old days! Better quality speaker, better quality microphone, nice big PTT button and still the option of an in-ear piece.

A.

well i would think both.
one would say be the base the other the mobile.
each must rx & tx but the
otherway around if listed mobile first.

One will be the frequency that all the mobiles use to transmit to the repeater, the other will be the frequency that the repeater uses to retransmit to all the mobiles.

What you want is the repeater transmit frequency, not the mobile transmit frequency. It should be clear from the list what they mean by rx and tx in this particular case.

If it isn't clear from the list, try both:

- On the mobile's transmit frequency, you'll hear only one side of the conversation (or at least there will be big differences in signal strengths from different mobiles). Depending on distance and terrain, you may not get anything at all - the repeater probably has a much better location and antenna than you do.

- On the repeater's transmit frequency, you'll hear both sides of conversations with approximately equal strength (provided the repeater is hearing both mobiles OK).

If the frequency list is readily visible on the Web, post its URL and I'll have a look.

They certainly aren't specific are they?

However, it looks as though they're talking about frequencies from the repeater point of view. So start with the tx frequency. If you hear both sides of the conversation OK then you've got it right.

From what I could make out, it looks like 400 mhz frequencies with a 5 meg split. The repeaters will normally be on the lower of the 2 freqs so the 413to 14 mhz range is what you want to program in.

physsics to the rescue
300/frequency in mhz gives length in meters

the 300 comes form the lv=c calculation

using above a 900mhz frequench has wavelength of .3 meters

I prefer to work in metric because everything is base 10 as in 100
centimeters in a meter but there are not 10 inches in a foot and not
1000 inches in a mile......math is easier in metric

I am auctioning two Texas Instruments TIL 306, and four TIL 308 LED displays on ebay. The TIL 306 was used in the Yaesu FT-301 series radio. The 308 was used in other scanners and radios (both were used in some microcomputer circuits). Parts are all new and unused and all tested good. see:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5771226186&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

and

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5771227025&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

for details.

Hi,
I have a pair of Radio Shack Scanners. Radio Shack said that due to
the age of the models they cannot guarantee repairs would be
satisfactory if I sent them to their repair facility.
I like the scanners but they need work. Who repairs Radio Shack
scanners other than Radio Shack?
Thank you in advance.
Mike

Encrypted,is it,not for some while yet.Much was promised but little delivered.Wait until you get your airtime bills.Then decide if you can afford the add on's.Wonder if the local police authorities were told of the running costs & what they will be asked to contribute.

> Be fair ! Why should it be different from any other government project.

Of course, why should it be. But on the flip side of this, some Government-sponsored systems work wonderfully. Radio and mobile telephone technology is nothing new, and all airwave has done, really, is throw encryption into the mix and make minor changes to the mobile telephone model. What is so hard here?

> You didn't really think it would work did you ???

Considering they spent £2.3bn (and counting!) on the system, I would have hoped it to work slightly better than the quality I can get out of two tin cans and a piece of string. Sad, really.

Cheers,

PC A.N. Other.

2144. PopCom editor comes to Feeding Hills, MA - May 6th

Newsgroup: rec.radio.scanner
Date: 2005-05-01 04:05:26 UTC
From: "Jim, KK1W" <kk1w@charter.net>
Message-ID: <aAYce.26958$Ow2.1428@fe06.lga>
Source record: 13606

From: "Jim, KK1W" <kk1w@charter.net>
Subject: PopCom editor comes to Feeding Hills, MA - May 6, 2005
Date: Tuesday, April 12, 2005 8:11 PM

Harlold Ort - N2RLL comes to the HCRA!

Mark your calendars now for a meeting with Harold Ort - Editor of Popular Communications Magazine. Mr.Ort will be addressing the members and guests of the Hampden County Radio Association in Feeding Hills, MA.

Popular Communications is the premier magazine for all types of radio enthusiasts. With regular monthly columns from SWL to scanners, utility to ham radio PopCom has something for everyone. N2RLL will have the latest and greatest information about radio listening for everyone attending.

The meeting will be at the regular HCRA meeting place in Feeding Hills, MA, the Feeding Hills Congregational Church.

Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030

Date: May 6, 2005
Time: 7:30 PM

You don't need to be a member of HCRA to come to the meeting. Everyone is always welcome, all you need is an interest in radio communications. I can assure you it will be time well spent.

To celebrate the SWL nature of tonight's meeting the raffle prize will be a Sangean ATS-505P portable shortwave radio. For as little as a $1 donation you could go home with a radio worth over $100!

Because of the expected crowd, our regular club business will be postponed until the June meeting. In addition to Mr.Ort's presentation there will be coffee, donuts and other refreshments available and as usual a fantastic raffle.

If you are close to Feeding Hills, MA it is our genuine hope to see you at the meeting. Visit our web site for additional information, other club events and directions to the meeting.

I'm kind of in the same boat...

My MVT-7100 went TU a few weeks ago (that would be "transistors up", wouldn't it?!?). I bought it several years ago from Javiation and wrote to Jonathan but never heard back.

Anyone know where I might get this radion repaired?

Also... at "Strong Signals" (http://www.strongsignals.net) you can order a MVT-7100 or MVT-9000 owners manual written for mortals. That's an intersting site!

You're going to get the Radio Shack brand right back again.

Radio Shack (U.S) will start opening its own stores in Canada under its own
name imedialtey, now that they have back rights to the name.

There was a news story tot hat effect in the alst day or two.....

Beware having Radio Shack do any service. Years ago I sent them a 2004 scanner that needed work. They first quoted $125 which I authorized. Two weeks later I got a call saying they increased it to $250, so knowing I could sell it on Ebay for parts I asked for its return. A month passed and I never got it back. Finally got it back after the local store manager made a call to the regional service center manager. Apparently the tech who was responsible for the quote didn't think I would want it back and kept it. Funny thing was when I got the scanner back it worked perfectly and I was only out the estimate fee. I'm pretty sure they fired the tech over that one.

TV channels 52-69 are going away....they are going to the new 700MHz bands (Upper and lower 700) because the TV channels will be shrinking due to DTV....there is no longer a need to keep a guard channel (blank ones) between active TV signals in a given area...you can now have TV 7 and 8 or 8 and 9 operational in the same city as digital...under analog they have to leave a blank channel on either side of an operational channel...so it would be 7 and 9 only or 8 only.....With the guard channel need removed, the number of TV channels total needed for the country shrinks and thus the high end was done away with. There is also talk that TV 2 thru 6 will go away because DTV does not like skip conditions that happen more frequently on those channels...

Michael:

Have you tried removing the batteries for awhile? Sometimes microprocessors can get confused, and lock-up. The only way to clear them, is to totally remove power for a few minutes.

I also found this info searching the groups with Google, might be of some help:

Demonstration mode : Press C/AC + BS & Power on
MVT-9000 Test Mode : Press LAMP + MONI + LOCK & Power on

NB. Accessing either of these modes will ERASE all stored memory information. The only way to get out of Test Mode is to either switch off and go into demo mode then off and on again or to do a complete reset (C/AC + ENT & Power on).

Good luck!

It sounds like what may have happened was someone there repaired the
scanner, then when you said "forget it send it back", they were dragging
their feet in the hopes you would just let it go. Whoever did the repair
before they were given the OK, probably had plans for the scanner. Sounds
like you basically got the work done very cheap.
Kind of surprising they would even try to quote $250.00 to "fix" a
scanner. Hell you can buy a nice new one for that, but what the hell worked
out good for you.

Greets.

I'll be driving from CA to OK in about a month. I was pondering taking the scanner, but then I thought I'd have to enter a *ton* of frequencies for various highway patrol districts, towns, sheriffs, etc. Then I'd have to put all of that in banks and scan the appropriate bank. Way too much research and inputting freqs....

Can someone give me a general idea of what a good set of general freqs might be for this trip? I guess I won't be able to input all the specifics, but thought a general emergency and shared set might work....

Thanks.

This seems like a classic most-for-the-least problem to me. Sure, it
wouldn't be worth it to get EVERY SINGLE frequency set programmed in,
but if you get highway patrol for every state and police for every city
of population > 25K, you'd be in pretty good shape for just an hour or
so of effort. Then snarf the shared frequencies here (for
ambulance/hospital and what-not):

http://strongsignals.net/access/content/faf.html

If you can't find one for free, this site claims they can send you a "copy", for $6.00, which includes shipping. Seems to be the least expensive, from places that are selling copies.

Good point Jim! Also, Radio Shack has an enhanced clone of the BCT-8. It's the PRO-2051. It has 1,000 channels, and although normally selling for $199.99, it's on sale right now for $149.99, $50.00 off!

The only limitation on the BCT-8, and the PRO-2051, is that neither covers the "Digital Mode", so here in Michigan, they do not cover the Michigan State Police.

I have a Sams Scanner-Monitor Servicing Data book for sale. It is in good condition considering its age. 1975.
It has schematics, parts lists, & service adjustments.

It covers the following models:

Bearcat IV
Craig 4350,4350A
Kris Tri-band handheld
Lafayette Porta-Scan-4
99-26213W,99-26221W
Midland 13-903, 13-904, 13-916, 13-934,
13-940,13-944
Realistic Pro-4(20-168),Pro-7A(20-167),
Pro-10(20-170), Pro-77(20-166)
Pro-88(20-163)
Robyn 100-B(Hi Bander)
HL-8+8(Hi-Low Bander)

I'm asking $12.00 shipped cont. US only.

Just my 2 cents - I travel frequently and find myself in out-of-the-way motels and hotels and I recently bought the BC246T with the close call feature - be surprised what you hear around small town motels and all. This scanner is great to have if you dont know area freqs. But, keep in mind, it is very close proximity to where you are located

I have to trade an Icom PCR-1000 with Icom software, new in the box. Also the German produced software Bonito 5.2 version for the PCR-1000. All is new in the box, with warranty, etc. The Bonito software was invoiced at $241.00 alone. Do a google search on the Bonito 5.2 software. You will be amazed as nothing else comes close to doing as much. Even swap...your Yaesu must be as new. No I will not break up, make illiegal copies of the software, or sell the entire package. Interested in a trade only. Reason? I just sold a complete all-Icom station (DC to daylight), satellite, HF, etc. I have purchased the new Yaesu Ft-897D, Yaesu FT-8800 for mobile, and Yaesu VR-7X handi-talkie. The Yaesu VR-5000 would compliment as well as complete my station. Thanks. And please reply via email. Pat, K4AVO

several available on ebay ..... most of the
pro 2004 / 2005 / 2006/s have been selling for well under $100
lately .

new back lights are selling , also on ebay , for less than $6 .

Heartily agreed. That software is fantastic, and does exactly what you
say--makes it fun instead of a chore.

There is an undocumented feature which allows extended receive. This is available in Don Starr's Win96 software at www.starrsoft.com . There is also the earphone jack mod, but that's just for audio.

As far as unblocking cellular frequencies, etc, cannot be done as it is blocked in the CPU itself. It will cover 25-1399 MHz minus cellular with the Win96 Extended Frequencies option but that's really about it.

The radios listed below are for sale or will trade both radios for handheld scanner - Pro 95 preferred but all offers considered. Prices include UPS ground shipping within the continental US.

Degen DE1102 - In excellent shape. Less than 3 months old. This is a small, compact, full coverage, radio. Comes with all original accesories - manual, cloth carrying case, rechargable NIMH batteries, and 220V AC adapter. Batteries can be recharged inside the radio. Some of the features of this radio - 190 programable memories, ssb coverage, Wide and Narrow filers, FM bass boost. A review of this radio can be found at:

http://www.radiointel.com/review-degende1102.htm

Price - $50

Tecsun PL 350. Tecsun's newest radio. Less than a month old. In excellent shape. Comes with all original accesories - manual, cloth carrying case, rechargable NIMH batteries, and 220V AC adapter. Batteries can be recharged inside the radio. This radio has 550 memories, antenna trimmer, selectable IF frequencies - 455 or 450 KHz for AM and SW. Very nice compact SW radio. A review of this radio can be found at:

http://www.radiointel.com/review-tecsunpl350.htm

Price - $50.

I'll sell both radios as a package for $90.

I have to agree wit the other posters, using something like win85 does make the job easier. You can organize you scanner to do it what you want you better.

Along the same line...does anyone have the codes that program the pro95. While I haven't done a turn everyrock over type of search I can't seem to find the basic instruction code that people who write sopftware to program the scanner use. v I know its out there somewhere or else win95 and the others couldn't be written for this scanner. Anyone have it or know what it can be gotten?

There should also be a separate section for broadcast (MW and FM) radio
rather than limping it all in with Shortwave.

call phone jammers are good for places where you wanta quiet zone, like
movie theaters, opera houses, and other places where cell phone usage is
discouraged

well, for me, I just go in hte computer room.. hard to get a cell phone
signal in there due to all the computer RFI (RAdio Frequency
Interferance) often cell calls drop or are unintelligable... Where
Iwork, our computer room, raised floor is 30,000 square feet and loaded
with Sun, IBM, HP, and Cisco equipment..usually in there its better to
use a land line or a cordless since we have cordless repeaters spaces
through out the computer room to provide coverage so we can talk to a
hardware vendor while being near the server

2213. apco 25 and AOR 8200 MIII

Newsgroup: rec.radio.scanner
Date: 2005-05-08 20:20:46 UTC
From: jamoran <john@analon.com>
Message-ID: <_sednZuBbK4F6ePfRVn-gw@sedona.net>
Source record: 13575

have an AOR 8200 M-III receives EVERYTHING...no gaps between about
500khz (am radio) and about 2Ghz (2,000 mhz)

have noticed that some agencies I like to listen to have switched to
800mhz (866-861 and 866-869 mhz)

I know the AOR-8200 does accept slide in option cards for tone
elimination, audio recording, and memory expansion

is ther ealso a card that decodes th APCO-25.. I have noticed several
agencies that have gone to the 800mhz systems only a portion of the
communications is audiable as analog, the rest is hash noise....or APCO-25

the one thing I dislike about APCO-25 is it allows dishonest government
agencies to perpetuate their dishonesty without it being known...
when in the clear, if someone heard something not entirely kosher, they
could call the news media and spark an investigation.....

now you can have "Boss Hogg" and sheriff "Roscoe" run the county and its
easier for them to get away with their antics

2214. Re: apco 25 and AOR 8200 MIII

Newsgroup: rec.radio.scanner
Date: 2005-05-08 21:15:57 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <EsqdnVWU860-HOPfRVn-tg@comcast.com>
Source record: 13576

APCO-25 digital signals are not encrypted by default, and can be easily monitored, in the clear, on scanners designed to do so, such as; Uniden's BC296D Hand-Held, and BC796D mobile/base, and Radio Shack's (GRE), PRO-96 Hand-Held, and PRO-2096.

To my knowledge there is no APCO-25 Digital Conversion module available for, or planned for the AOR 8200 Mk-III. AOR does make an APCO-25 decoder (ARD 25), but it has limitations. You can read more about it here: http://www.universal-radio.com/catalog/decoders/0657.html

In Michigan, the State Police have used encryption on occasion, when it was necessary to ensure the safety of the officers, or to protect the sensitivity of the information being discussed. I think this is reasonable, and necessary, especially in today's world, with the severity of the crimes, and the advanced technical capability of the criminal/terrorist element. For example, if you were distraught over the loss of a loved one, and were threatening suicide, would you want your full name, address, and phone number, to air over the scanner, in the clear, for all your neighbors, friends, and co-workers to hear? Or maybe your daughter was being followed home from school by a stalker, and your wife called the police. Should they broadcast her name, home address, phone number, and the name of her school, and the hours she goes to, and from, in the clear, so the pervert can find her more easily? I think not. Don't get me wrong. I like freedom of information as much as anyone else. I want to know what's going on around me. But sometimes it's not a good idea, and certainly not necessary.

Preventing encrypted radio coms within law enforcement, and government agencies, will not stop corruption, and wrong doing. I would compare that to the total elimination of guns in the U.S., then expecting no one to ever get killed.

buy any scanner and give the manual to a 10 year old kid, and have them
program it for you

geez.....a PRO-2006 complicated?

WTF!!

2220. 800 MHz Rebanding: Basic Question On, Please

Newsgroup: rec.radio.scanner
Date: 2005-05-09 12:33:38 UTC
From: Robert11 <rgsrose@notme.com>
Message-ID: <VK2dncr5BbICxeLfRVn-2w@comcast.com>
Source record: 13582

Hello:

I'm a very light 780 user, and not too technical.

Have been reading most everything I can on the 800 MHz re-banding, and am a bit confused.
Actually, a lot more than "a bit."
Not too technical, so I guess that is the reason.

This has probably been covered a zillion times, but if anyone could just clarify it a little more, would be most appreciative..

(a) What I don't understand is why can't one just move a particular station's frequency (that uses MOT analog) to the new frequency, and have it work ?

What am I missing.

(b) I guess the same question, regarding CC usage.

All I use are CC's. Here, I can imagine that the switching plan is or might be different in the switching the CC actually does to get to the talker/listener. Is this the case ?

So, using the new CC freq. would not work; correct ?

** But again, wouldn't (a) be possible ? Why ?

Thanks again for help,
Bob

The current bandplan is hardcoded into the scanner. All this depends on the scanner though. The control channel sends the scanner to a frequency by use of some sort of "code" The "code" corresponds to a frequency mapped in the Scanner's firmware.

When the frequencies all move, these new frequencies are not in the firmware of the scanner as it relates to the "codes" sent by the control channel. As far as the scanner knows, nothing has changed. When the "code" is sent over the control channel, the scanner will tune itself to the OLD frequency, not the new one. The control channel never actually tells the scanner what frequency to go to. All it does is send that representaive "code".

You'll see your selected talkgroup as being used and active, but you'll never hear anything. It won't matter if you enter all the new frequencies in your scanner. It doesn't work that way.

Most of us will have to buy new scanners unfortunately.

hey Bill ....

I agree whole heartedly . Interestingly , in my town, here in
central California (where ' everything " police is in the clear
and on standard nbfm) , " all " sensitive information of the type
you speak , is " always " transmitted onto the laptop wi-fi MDT
type computers in each police car. actually " most " information is
transmitted that way and listening to the basic calls mostly provides
little interesting detailed information anymore. recently all the
local police agencies have installed police wi-fi bubble " out of
the car " blue tooth style personal PDAs so that the cops , even
on bicycles or on their dirt bikes , have the same abilities as the
wi-fi MDT inside the cars. the local police wi-fi mdt bubble is always
encrypted.

it's odd and at the same time interesting to hear the dispatch and
cars making calls and referring to items on the " dispatch " screen
, that instead of actually mentioning any details out loud. a quirky
but effective method to keep privacy.

GRE has indicated that the Radio Shack (marketed) PRO-96, and PRO-2096
Digital Programmable scanners, will have the ability to be modified for the
new band plan by flashing the firmware with your PC.

They do that here also, when using the older 150/450MHz analog systems, as
well as non-digital 850MHz trunked systems.

I just bought a pair of FRS / GMRS radios and planning on bringing them to Europe (i.e. Austra, Germany and Switzerland). Does anyone know if FRS legally being used in those countries? If so, if I purchase a GMRS license, am I going to be benefitted from the longer range reception from the GMRS in Europe?

Thanks!

AFAIK no they will not be legal as they are on a different band (or part of)
(i think you will find frs [USA ones] is right in the middle of the police
channels in some european countries)
446Mhz is the european standard and it is unlicenced 500mW max.

Message-ID: <NM6dnZ2479Jagx3fRVn-1A@sedona.net>
Source record: 13596
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.travel.air

has the attitude at Europeean airports changed re scanners since I visited a few yers ago ??? I always travel with at least oni hi-tech "toy" or radio

a few yers ago, I traveled to Germany to visit relatives and play tourist. I flew into Frankfurt (FRA/EDDF)and then on to Hamburg (HAM/EDDH), on the way home, we left out of Stuttgart (STG/EDDS)

I listed both the IATA (Airline) and ICAO codes... USA airport ICAO codes begin with a K (as in KLAX, KPHX)

Well, at FRankfurt, I had a hand held scanner in my hand and could listen to anything I wanted, tower, operations, police and nobody seemed to care... same at Hamburg....

When we left via Stuttgart, the security, Airline people and airport police asked me what the thing (scanner) was and what I was doing with it.. I also had a frequency list on a note pad..frequencies for Southern California and the Phoenix area.... I was asked to put the scanner in my checked baggage.. comming back from vacation, I had no more room in the checked baggage...

Finally, I was ushered into a corner of the terminal, had an Airline supervisor, airport security supervisor, and ref from the airport police I had to give them the scanner and was able to get it back once hte plane landed from an airline rep who had the scanner in an envelope with my name on it. The scanner was caried in the cockpit by the pilots

In addition to the scanner, I also had a SONY-2010 shortwave..the shortwave was in my briefcase. I remember the security swabbing the radio to check for explosive residue.. I had not fertilized my lawn before packing so I did not have to worry...I was however asked how the thing worked...the SONY-2010 has 32 different buttons on the face... either function keys ore one-touch memory buttons...

Nothing has changed. You are allowed to own a scanner, but you only
are allowed to listen to ham radio and broadcast with it.
It is not a good idea to listen to anything else in the public, so use
it hidden, and nothing should happen :-)

regards - Ralph

No, in europe it is illegal to use FRS. We have PMR there, 8 channels
446 MHz, 0.5W.

regards - Ralph

2237. ICOM PCR-100 and XP COMM port problem

Newsgroup: rec.radio.scanner
Date: 2005-05-10 14:34:41 UTC
From: bakermo <bakermo@swbell.net.yourpants>
Message-ID: <9eh181decde24iormrlkdldtiivj7b4fpo@4ax.com>
Source record: 13599
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello all,

I just obtained a ICOM PCR-100 via ebay and am trying to use TalkPCR. I hope this isn't a stoopid ;-) question - but I have been browsing the messages in this forum and can't find my particular problem.

I am running XP PRO with SP2 on an ASUS mobo and an AMD XP 2000+ CPU. It has only 1 COMM port. I am also running TalkPCR 2.4

When I fire up TalkPCR and "accept" that the software is now freeware the radio plays just fine and dandy. It continues until I set on a station (I am still new and just want to listen to a local AM station to verify the thing works). Then after about 15 to 30 seconds the output goes off. It doesn't fade out - it just goes off like someone threw a switch.

The controls all seem to function but no sound from the speaker (I have a separate set of speakers connected directly to the ICOM).

If I shutdown TalkPCR and fire it back up the radio plays just fine; until I stop doing things with the controls and then 15 to 30 seconds later the sound goes off.

I tried downloading the ICOM PCR-1000 software and what it does is after about 15 to 30 seconds it says it lost connection to the radio. So I'm guessing the COMM port connection is being broken by "something".

I tried turing off all the stratup programs (using MSCONFIG) for a "clean boot" but got the same results.

I also tried running TalkPCR in Windows 95, and 98/ME mode - no change.

Anybody have any idea?

TIA

bakermo

I've never programmed EDACS, but I found this, that may be of some help:

http://support.radioshack.com/support_tutorials/communications/200-0523/67344.htm

Programming the PRO-95 will be different from the PRO-94. The 95 is made by
GRE, and the 94 is made by Uniden.

Hope this helps.

Bill Crocker

That's because hamfests have been taken over by computer folks; almost no radios to be found these days.

If you live in and around lake station,indiana here is some information for you.lspd uses 2 repeaters(mr) 1 for fire and the other for police.the police is 159.195.fire is 154.665.There is a local towing co that operates here on 157.500 and LSPD uses this for private comms between cars simplex they call it SWITCH UP.the Merrillville indiana fbi office is often heard on 170.500 in the clear they have a trunked system but use this freq for local surveillance its a repeater output.

2248. writing programs for scanners

Newsgroup: rec.radio.scanner
Date: 2005-05-11 20:38:25 UTC
From: Bill Carty <wmccarty@columbus.rr.com>
Message-ID: <53uge.23974$Ib4.11474@tornado.ohiordc.rr.com>
Source record: 13510

Hi

I am interested in writing programs for the programing of scanners.

I have windows visual basic net so I don't have to buy a program to build the build program. So that's one step completed.

So my questions are this

where does one find the command set scanners that can be written into a program? Do manufacturers offer the command set up? Or does it have to be hacked?

At one time I had the command codes for my bearcat 895, I forgot where I go them. Been trying to find the codes for a pro 95 and have hit a wall.

Should I come up with something I am willing to share it but I need to find the code somewhere for the scanner(s) and then write the code.

For me its mostly a way to have something to do.

any guidence that any of you are willing to share will be welcomed

Bill Carty

2249. PRO-95 "many banks" software?

Newsgroup: rec.radio.scanner
Date: 2005-05-12 04:16:00 UTC
From: Bo Williams <williams@hiwaay.net>
Message-ID: <1185m082hl71055@news.supernews.com>
Source record: 13511

I love the Win95 software for my PRO-95, and I have a lot of fun with it. It's cool, and the price is unbeatable.

That said, what would be really SUPER cool--and worth $20 to me, maybe--is the ability to save as many banks as you like, and then pull any ten into the scanner easily. Is there a way to do that and I just don't know about it? I save every Win95 file I come up with right now, just to make sure I don't lose anything I want later--but if I could peel banks off, save them, and pull them back into the radio whenever I wanted, I wouldn't have to do that and I could build the perfect frequency set effortlessly for any situation.

BTW, the "close-out" PRO-95 is up to $149.99, and the PRO-97 is up to $219.99, from $199.99 two weeks ago. :(

sorry m8 but this is all i can find about it
WIN 108

Decoding ACARS by Bernard Eccleston England

Description
The WIN 108 is a dedicated Airband Scanner and applies itself superbly to
monitoring acars. In competition against a Yupiteru 7100 and Realistic Pro
43 it easily came out on top.

Settings
ACAR frequencies, 131.725 and 131.525, were entered alternately into one of
the two banks of 10 memory channels. Volume was set at 90% with virtually no
squelch (ie quiet
radio). Listening to the data bursts through an extension speaker whilst
watching the screen, proved there was excellent synchronization.

Location:
Positioned about three meters away from the decode computer and directly
above another, it scanned two frequencies, effortlessly delivering high
yields.

Specification Features:
Frequency Coverage 108-142.995MHz
Frequency Steps: 25KHz

Memory Channels: 20 (2 X 10)
Sensitivity: Better than 0.5 v
IuV Input: signal to noise ratio 6db or greater
Spurious: 60db or greater
Band pass: 5KHz 6db down 25KHz 40db down
Squelch: 0 db uV (min), 10db uV (max)

Other Features:

a.. Long battery life.
b.. Priority channel
c.. BNC Aerial socket
d.. External power socket
e.. Simple operation
Summary
The only downside to this scanner is that it is no longer in production. If you are interested in Acars and ever get the opportunity to own one of these scanners, coupled up to the
Airmaster you are on your way to the ideal decoding set up.

Environment:
Scanners: Win 108, MVT-7100, Pro-43
Computer: 486 DX2 SX/ 66MHz (AMD cpu) 8Mb memory
Antenna: Howes AB118 active antenna 118 to 137MHz
VHF Air-band Mounted Externally
Decoder: Lowe Airmaster Version 3 Software

Hello all,
I just got a second hand Pro-96 and I am ok with moving around freqs with Win96 but I would like to be able to see what district/talk-group is transmitting at any one time.
Right now no matter what district/talk-group or freq is tuned in I still get the same readout on screen (Phil PA TRS). Is this normal? Is there a way to change something to be able to see the talk-group?
Any help would be appreciated!

With, or with out CD player? Black, or White? First generation, or second?

Thanks,
Bill Crocker

> http://hiwaay.net/~williams/

That's an easy one, Bo. I do this all the time.

Simply save your banks with a descriptive file name.

Example: Load all of your PD info including trunking info
and then save it as PD.p95

Lets say you have another 10 banks that you want as
fire only. Load the frequencies and then click on
"save as" and give it a description like FIRE.p95

When you want to listen to a particular item, simply open the file,
upload it to the scanner and enjoy!

When I travel, I have various city files. When I'm in Phoenix, I
simply upload the PHX.p95 file into the scanner. When I go to Omaha,
I simply upload the OMA.p95 file. All frequencies, trunking info, ect
is saved.

By the way, did you know that the stored files along with the
program itself is small enough to fit on a floppy disk? So, when you
travel, just take the disk with you. That is, if you can still find
a computer that has a floppy drive :) Of course, you have to take
the transfer cable with you.

White in color with no cd.Has credit card remote and sounds awesome.Don't
have a clue on generation.

2262. Help with Regency Z10.

Newsgroup: rec.radio.scanner
Date: 2005-05-13 04:13:41 UTC
From: jon <jonrev1978@wmconnect.com>
Message-ID: <1115957621.781198.186470@g14g2000cwa.googlegroups.com>
Source record: 13524

Greetings! I picked up a Regency Z10 ten channel scanner the other day and have it working again. My daughter wants a scanner to listen to the local sheriffs department, etc. I would love to have a copy of the owners manual to figure out a couple of things, but the big problem is the memory. I assumed it had a battery backup to store freqs in memory, but I cannot find a battery anywhere in it. As soon as you unplug it it loses what I put in. It does go back to what was in it previously, so I need your help. How do you input freqs into memory so they stay put? Does it have an internal battery that doesn't look like a battery? Help appreciated please! Thanks and have a great weekend! Jon.

Memory is backed up by a capacitor, C177, a 0.047 Farad 5.5V radial electrolytic. It's on the right side of the main board near the center line of the board. Below the cap is CR116, the diode that feeds the backup circuit. Check both components and replace as needed.

>Is it like the Maycom AR108 ?

Nope :-(

The Maycom AR108 was/is the same as the [no longer available] Commtel
307.

The WIN108 goes much further back. It was for a very short time
available in the USA towards the end of its life as (from memory) the
MAC108.

It has as an earlier poster mentions 20 channels in 2 banks of 20 and
just covered the VHF Airband stuff.

I am not aware of one being available in PDF or similar format on the
'net but I may have a copy left over I can perhaps scan. I will try to
look next week.

Try these people
from the Airband On Line web page
they have a pic of the WIN-108 and there are many references to is being
used for ACARS and have this

We can provide Operating Manuals for many scanners,
so if you've moved house and misplaced yours or the dogs chewed it,
then perhaps we can help. Send an email to Airbandol@aol.com

http://www.airbandonline.co.uk/home.htm

Cheers

Kev

OK - I solved my own problem. The RS-232 cable I was using was
configured to be a null MODEM. New cable and everything is OK!

Interesting that it worked at all with a null modem cable.

2271. DRU-R100 USB radio as scanner ???

Newsgroup: rec.radio.scanner
Date: 2005-05-14 14:57:06 UTC
From: andy <nobody@nospam.com>
Message-ID: <d653k1$4eh$1@newsg1.svr.pol.co.uk>
Source record: 13533

I was just browsing through e-bay when i came across a seller trying to sell the DRU-R100 USB radio with special software which would make it pick up Airband,PMR etc !. Now, bearing in mind that the USB radio is 88-108MHZ, how can the software take it out of that range ??

I have one of these USB radios, so what is the software called ?

The e-bay link is
http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5773005558&fromMakeTrack=true

Cheers
Andy

Sounds interesting, but suspect. Doing a search on DRU-R100, using Google,
came up with a few things. Try it.

Andy ....

a look around the web about that radio , shows nothing of it being
able to change modes or bandwidths. actually , many articles
mention how simple the radio is with NO controls other than frequency
, scanning and FM stereo indicator.

for this radio to be useful in airband or other services (PMR etc)
it would have to be able to detect NBFM or AM and be able to
have the I.F. bandwidth changed from the WBFM necessary for
receiving commercial stereo FM broadcasts.

current information and software available suggests that the ebay
sale you mention should be VERY suspect. there is NO
information on the web or from the maker that suggests that the radio
is capable of detecting different kinds of modulation schemes or
altering the radio's bandwidth. (making it useful ONLY for stereo FM
broadcasts)

I'd hang on to my money for a while and see what happens first.(also
notice that this ebay seller only has a feedback rating of " 2 ")

He mentions he already has one, and not intending to buy the one on eBay.
He's looking for software.

roger that ..... I hope the ebay sale eventually proves correct.
seeing the low cost of those radios .... it'd be nice if they can do
those other things too. maybe the heart of that receiver is one of
those new " soft chips " ..... RF dsp radio chips controlled
completely by software and / or firmware ..... then in theory it
would be possible for it to do other things if the software to control
it was available !

guess time will tell ..... maybe " he " can report back and let
us know if he finds something !

k.............

Thanks everyone for the info ! - Yeah, i actually found some software (Radiator) after a hunt on Google. It does do 60 - 160 MHz, however with it being WFM i doubt it would be of any use out of 88-108 MHz !!!!

Cheers
Andy

What are YOU planning on doing?

Cellular Phone Freqs do NOT belong in your scanner.

You do Not need Cellular Freqs/Channels.

Where were you on 9/11 ?

Unless you are a US Government Agent, you are on a need to know basis ---
You do Not need to know Cellular Freqs./Channels.

Let me guess...you're one of the mindless sheep that voted for Bush, aren't you?

Cellular frequencies are not classified, fool.

2283. ID Tracker Updated - V3.7.0

Newsgroup: rec.radio.scanner
Date: 2005-05-15 17:05:12 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <kcLhe.34451$yq3.8804@bignews1.bellsouth.net>
Source record: 13545

ID Tracker has been updated.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Changes since V3.6.0:

- Added BC898T support (thanks to SP5XSB).
- Added marker to Audio Playback to indicate when a specific audio segment has been played.

Roger,

I asked if you are stupid, not a dick wad. But since you mention it, what is
a dick wad anyway?

I'm not completely sure, but I think it's like a tampon, except it's
designed for use by men who have that "drippy dick" syndrome...

If you have web browser capabilities as you do email then look for your
so-wanted cellular freqs and channels.

I'm sure as hell ain't gonna provide you with that info!

You're a grown ass man!

There are websites that have the info you are so coveting!

Easy Sean, He just asked a question. Thats what we are here for. The information he asked for is not a secret by any means and its much easier to get by asking the NG. Why should he go digging for hours if he can just ask us? That's what I would do. There isn't much to listen to on the cellular band anyway, well at least thats what I have heard. :-).

2299. Overview Of Mobil Phone Systems

Newsgroup: rec.radio.scanner
Date: 2005-05-16 22:29:26 UTC
From: NORMAN TRIANTAFILOS <kb9ygd@verizon.net>
Message-ID: <a99ie.535$yc.505@trnddc07>
Source record: 13461

Overview of Mobile Phone Systems

The large number of different mobile phone or cellphone systems that are talked about today can be very confusing. Whilst not all are in use today, some of the older systems have been superseded and some of the newer systems have not all been rolled out yet, nevertheless many different names and technologies are talked about. The table below gives a summary of the main systems that have been used, are being used or are due for introduction.

Cellphone System

Generation

Channel Spacing

Access Method

Comments

AMPS

1G

30 kHz

FDMA

Advanced Mobile Phone System, this analogue system first developed and used in the USA

NAMPS

1G

10 kHz

FDMA

Narrow band version of AMPS chiefly used in the USA and Israel based on a 10 kHz channel spacing.

TACS

1G

25 kHz

FDMA

Analogue system originally in the UK. Based around 900 MHz, this system spread world wide. After the system was first introduced, further channels

were allocated to reduce congestion, in a standard known as Extended TACS or ETACS

NMT

1G

12.5 kHz

FDMA

Nordic Mobile Telephone. This analogue system was the first system to be widely used commercially being launched in 1979. It was used initially on 450 MHz and later at 900 MHz. It was used chiefly in Scandinavia but it was adopted by up to 30 other countries including Oman.

NTT

1G

25 kHz

FDMA

Nippon Telegraph and Telephone. The system used in Japan, using a 900 MHz frequency band, and 55 MHz transmit receive spacing. (A high capacity version is known as HICAP).

C450

1G

20 kHz

FDMA

The system adopted in West Germany (East Germany was separate at this time). It used a band in the region of 450 MHz along with a 10 MHz receive / transmit spacing.

GSM

2G

200 kHz

TDMA

Originally called Groupe Speciale Mobile, the initials later stood for Global System for Mobile communications. It was developed in Europe and first introduced in 1991. The service is normally based around 900 MHz although some 850 MHz allocations exist in the USA.

DCS 1800

2G

200 kHz

TDMA

1800 MHz derivation of GSM and is also known as GSM 1800.

PCS 1900

2G

200 kHz

TDMA

1900 MHz derivation of GSM, and is also known as GSM 1900.

TDMA

2G

30 kHz

TDMA

Although it was originally known as US Digital Cellular (USDC) and was introduced in 1991. It is sometimes called North America Digital Cellular and also known by its standard number IS-54 that was later updated to standard IS136. It is a 2G digital system that was designed to operate alongside the AMPS system.

PDC

2G

25 kHz

TDMA

Pacific or Personal Digital Cellular. The system found only in Japan where it has gained very widespread use. It has many similarities with IS-54 although it uses a different speech coder and a 25 kHz bandwidth.

GPRS

2.5G

200 kHz

TDMA

General Packet Radio Service. A data service that can be layered onto GSM. It uses packet switching instead of circuit switching to provide the required performance. Data rates of up to 115 kbps attainable.

EDGE

2.5 / 3G

200 kHz

TDMA

Enhanced Data rates for GSM Evolution. The system uses a different form of modulation (8PSK) and packet switching which is overlayed on top of GSM to provide the enhanced performance. Systems using the EDGE system may also be known as EGPRS systems.

CdmaOne

2G

1.25 MHz

CDMA

This is the brand name for the system with the standard reference IS95. It was the first CDMA system to gain widespread use. The initial specification for the system was IS95A, but its performance was later upgraded under IS95B which the cdmaOne specification actually uses. Apart from voice it also carries data at rates up to 14.4 kbps for IS95A and under IS95B data rates of up to 115 kbps are supported.

CDMA2000 1X

2.5G

1.25 MHz

CDMA

This system supports both voice and data capabilities within a standard 1.25 MHz CDMA channel. CDMA2000 builds on cdmaOne to provide an evolution path to 3G. The system doubles the voice capacity of cdmaOne systems and also supports high-speed data services. Peak data rates of 153 kbps are currently achievable with figures of 307 kbps quoted for the future, and 614 kbps when two channels are used.

CDMA2000 1xEV-DO

3G

1.25 MHz

CDMA

The EV-DO stands for Evolution Data Only. This is an evolution of CDMA 2000 that is designed for data only use and its specification is IS 856. It provides peak data rate capability of over 2.45 Mbps on the forward or downlink , i.e. from the base station to the user. The aim of the system is to deliver a low cost per megabyte capability along with an always on connection costed on the data downloaded rather than connection time.

CDMA2000 1xEV-DV

3G

1.25 MHz

CDMA

This stands for Evolution Data and Voice. It is an evolution of CDMA2000 that can simultaneously transmit voice and data. The peak data rate is 3.1 Mbps on the forward link. The reverse link is very similar to CDMA2000 and is limited to 384 kbps.

UMTS

3G

5 MHz

CDMA / TDMA

Universal Mobile Telecommunications System. Uses Wideband CDMA (W-CDMA) with one 5 MHz wide channel for both voice and data, providing data speeds up to 2 Mbps.

TD-SCDMA

3G

1.6 MHz

CDMA

Time Division Synchronous CDMA. A system developed in China to establish their position on the cellular telecommunications arena. It uses the same bands for transmit and receive, allowing different time slots for base stations and mobiles to communicate. Unlike other 3G systems it uses only a time division duplex (TDD) system.

am in casa grande arizona
do you want the locations of cellular towers ? I have a FCC masterfile CD that has many of these... I just need to find that since I last had it before I loved...

cellular 806-851 and 869-896 I have a cell band plan on my other computer I can send you if you want....meaning hte frequencies A, B, C, D cells might use..... also have airphone frequencies

Posts like this rarely evoke much resonse, since most people are not programmers. There is little, if any standardization of radio interfaces, which makes this type of programming more radio-specific.

The first thing you would need to do is work out an interface in net for the computer-radio linkup. An ActiveX control would probably be used for this, as it can also provide visual feedback, and will simplify the rest of the program to a degree.Optocom has put forth a standard for their stuff. Here is a short excerpt.

```
================================================================================
=
ABOUT CI-V
================================================================================
=
```

The serial interface on the OptoScan456(tm) conforms to the Icom CI-V interface standard. The CI-V interface is an asynchronous, half-duplex, TTL serial interface connected in a wire-OR (bussed) configuration. Several different devices can be connected to the bus simultaneously, and each device has its own unique address. Software developers are strongly encouraged to obtain a copy of the Icom Communication Interface - V Reference Manual from Icom, Inc. for detailed information on the CI-V interface protocol.

You will need to program for database access and logging, of course, I will leave the details of that to you. An Access database would be nice....

Other functions are outlined in the CI-V document mentioned here. This would probably be enough to get you started, at any rate, on a program for radios that use this particular standard.

Does anyone happen to know who the owner is of the PRO96 (not PRO-96)
yahoo group is? I have been trying to contact him for weeks but get no
response.

HI ALL
looking for the highest gain scanner antenna
it will be 40 in the air here on MS GULF COAST
prefer a vertical as i don't have a rotator but will consider yagi type if
gain is exceptional over my ham antenna of 10.4 which i am using now
scanner is bc780xlt

1. You need service for the walkie-talkie to operate.

2. The only way to talk 20 miles is "line of sight" .... in other
words, NOTHING in between the two units. That's why aviation
(airplanes) can talk hundreds of miles with low wattage.

3. You can hook up to a GMRS group and use their repeater
and get extended range. (Possibly 10-50 miles.)

Joe

I am happy you live in an area that has sufficient coverage.

I'm not as lucky.

No big deal .... just hit the speaker switch and use the
walkie-talkie with the earpiece instead of the speaker,
to listen.

WE all need to quit making all these radio calls (especially
when driving) and start using the old fashioned landlines ....
besides, my home landline has unlimited long distance.

All repeaters have good range, period. VHF is much better than
UHF, too!

Greetings Frank! Thanks so much for the info! I will make that a
project for the weekend. I loaned a nice scanner that I had bought for
my dad who died last summer to my daughter who has my 4 year old
grandson. I love the boy to death, but the longer it stays at their
house the less likely it comes home in one piece.
Do you or anyone else know where I can get a copy of the owners manual
for the Regency Z-10? I know my son in law can read the book instead
of calling me when they have questions. Thanks again for the help!
Have a great week! Jon.

If you have the win95 program and cable there is a file available, that has Worcester PD and FD already set-up.

I drove through Worcester and loaded the file into my pro-95 scanner before i left and it worked great.

You can get the file from www.scancapecod.us
Select 'scanner programming files' on the left side menu, and then click on pro-95. The files is called central massachusetts.

There are a couple of other files avaiable also.

>UHF, too!

Not in general. Especially with handhelds often UHF is better, due to
better antennae on both handheld and repeater side.

I'm not sure if Nextel is as secure as GSM, (Cingular / T-Mobile) or CDMA
(Verizon / Spring) but it is digital, and you cant pickup a Nextel
Scanner at Radio shack so for anything you need to send its more than
secure enough....

I don't think so. How do you figure Nextel is going away? They merely
joined forces with the other company. Nextel is not going anywhere.

Thank you! This has been out there for a week and you are the first one to respond to it.

I thought someone who might be fighting with a program for their scanner might out of sheer frustration want to discuss their problems and maybe the scanner community here might have some answers. I guess not.

Yes most people are not programers, but the one thing I have learned about hanging out here on the news groups that every once in a while some one who is not an ego maniac, and wishes to shre knowledge will share it either on programing, or RC car building, or like here sharing scanner information.

But thanks for the response.

I figured it might be an active x type deal though I still am learning visual basic, it shouldn't be too hard to figure out how to do it.

The key is to find out how the data is written to the scanner. It is most likely a simple csv file that is loaded into a memory location, but I havn't been able to figure out how to talk to my pro 95. Or for that matter my bc 780.

I am going to the ham vention on friday the 20th in dayton. Who know maybe some one will have the information I need.

Oh well time to think about how to make the com port on the computer talk to the PRO 95 to get the codes.

Thank you again.

60+ MPH winds are not a problem for the AntennaWarehouse Scantenna.
I've used a couple here in FL and have yet had any damage.

Granted the NilJon antennas are more sturdy and preform well but the
Scantenna does out perform the NilJon on everyband.

Source record: 13498

The biggest challenge is writing scanner
software is not the GUI. It is deducing the scanner's
command set (when writing control software) and the radio's
memory image layout (when writing configuration/cloning
software).

The latter is especially challenging
because most manufacturers won't share the info
without signing restrictive nondisclosure agreements.
If you don't want to be bound by such
handcuffs, you must learn the memory image
layout through your own experimentation and by sharing info
with other developers.

It gets real tough when manufacturers intentionally
encode the image information in nonintuitive ways.
You've got to love solving puzzles :-)

There are many free tool kits available for writing GUIs,
especially if you steer clear of Microsoft proprietary
stuff. You have a lot of freedom when designing the
GUI, especially if you use open source software.

Actually about 2 years ago there was an improvement. The older ones had used blue colored plastic pieces to hold the elements together. Over time the thin plastic would get brittle and break. About 2 yrs ago they started using a heavier/thicker plastic and also the elements were slightly thicker. The you can tell the newer ones because the plastic pieces are now black.

I have both the old version and new version, but even the old version survived 60+MPH wind gusts from tropical storms. The new version survived 100 MPH gusts from Hurricane Charley in 2004 with no damage. I took it down during the two other hurricanes due to loose tree branches and other loose flying debre.

My understanding is that they plan to phase out the iDen technology in favor of using the SprintPCS CDMA network. The PTT functionality may not change from the user's perspective, but under the covers, it will become a PCS service rather than the trunk-radio (SMR) service it is now.

So you wanted attention, walking around an airport with some type of handheld radio. Sounds like you need to pack that stuff and live without it for a few hours, sorta like not smoking in airports.

That's not what they said in the billing invoices I've gotten since the
merger. If they were to do away with iDEN, they'd have to supply all their
customers with new phones/radios.

That's not gonna happen.

So what about their new "Direct Talk" features? These seem not to need the network and would work in out of area conditions. Of course the netword extends range, but sometimes "direct" can be both useful and a lifesaver.

Anyone have the tech details on this? Frequency range? If analog or digital? Etc?

FRS/GMRS are Illegal in Europe.
They have a similar radio service to FRS but its on a different set of
frequencies.

Hi Guys,

A friend of mine gave me a few cell phone jammers to sell for him. They are identical to this one here:-

http://www.globalgadgetuk.com/Personal.htm

I have 2 jammers for sale, both are "SH066PL2A - For the Americas & Canada". They are brand new and come with a desktop charger, leather case, and rechargable battery pack.

I have no use for these units as they only work in the U.S. and Canada, so if you fancy purchasing one of these, please e-mail me and I will give you full details. The price for them is a VERY LOW £169.99 AND FREE SHIPPING TO THE U.S. On the website quoted above they are charging £194.39 with postage, so you are getting a bargain here. You're absolutely guaranteed to get a higher resale price should you wish to sell them on...

If you are interested in the European Versions do drop me an e-mail as I may be able to help you out.

Also, I believe that I have a few portable bluetooth jammers which have a range of 40 meters jamming range! Up to 40 meters diameter, covers an individual room of 14000 square feet (about 1260 square meter), depending on the type and strength of signal source. They will work anywhere in the world and they are available for the very small price of £99.99 + Shipping. It also can jam 802.11b/g WiFi communication. Prevent PDA or camera phone sends data or picture via Bluetooth or WLAN.

If you are interested in any of these products, please do e-mail me ASAP as they are likely to sell quickly. The portable bluetooth jammer only a few people in the world own because it is a very new concept.

Thank you very much...

P.S. For your protection, I am a verified member of paypal so your purchase will be covered!

Disclaimer: I cannot be held responsible for any misuse of this product, it is upto the purchaser to check the laws in their country before making a purchase.

If your are talking digital police signals, then for the most part, yes. If they are encrypted (scrambled), you can still pick them up, but your won't hear anything...

If you are referencing anything else that is digital, like cell phone, cordless phone, etc, then no...

thank you all,

you gave given me some stuff to chew on.

I can't say that I like solving puzzels, but I do like a challenge. And this is somethign to do when there's noting else going on when I get up at oh dark thirty and can't get back to sleep.

Now I have to find a way to get or write a capture program for when the computer talks to the scanner. That's not going to be fun.

Although I didn't look hard for it, I would have thought some one at the Hamvention this weekend would hav had it. Maybe they did and I just didn't see it.

(Oh the hamvention is the annual gathering of ham radio and genral communication hobbist at Dayton's Harra arena. I didn't find much but I was also being a scrooge with the money I took.)

SO I guess it time to start googling for a program to start watchign the com port traffic!

Thanks again guys.

Bill Carty

I quite agree ... This is supposed to be a forum for discussion and private trading, but the only thing I detest more than eBay itself, are the fucking clods that use it. I mean, there's no room for wondering why these anti-social dolts end-up burned, or in court.

WHOA!

It appears that my posting struck someone's nerve. Apologies, but I did first check the following newsgroups for OTHER for sale items, and of course, I saw plenty, even some, GASP, on the apparently much-hated eBay.

alt.radio.scanner (no charter or FAQ listed recently)
rec.radio.amateur (no charter or FAQ listed recently)
rec.radio.scanner (no charter or FAQ listed recently)

I found no charters for any of these newsgroups. Usually, newsgroups that do not allow FA: and FS: postings state that in their newsgroup's charter quite frequently. I guess that using eBay is forbidden in the opinions of "Robert Hawk" & "ionmale@ionmail.com" who feel it is perfectly appropriate to use profanity because they cannot think of a simple way to express their discontent with the posting of items for sale. Pathetic.

Clearly, these same people didn't see fit to FLAME the posting titled:

FOR SALE : ICOM PCR-1000

Which happens to be - are you ready - AN AUCTION TOO!!!

As a gesture of good faith, I will refrain from posting items on "YOUR" newsgroup in the future, but of course, I only have this one scanner for sale, so it is likely I would not have anything else to post for sale or auction on any radio or scanner related newsgroups.

Again, I am truly and genuinely sorry if I caused anyone any undue grief or hardship, but in the future, I would also advise your flaming EVERY SINGLE FS: or FA: posting that has an eBay link within the posting. The least you could do is not be so hypocritical. It makes you look so unintelligent and biased.

Fred,

In the USA, by law scanners must not be capable of receiving cellular telephone frequencies, so they are generally "blocked"; that is, the microprocessor does not allow those frequencies to be tuned in. Usually the same models of scanners are available for purchase outside the US, but without the specific frequency blocking. Although illegal, it is possible to have these unblocked scanners shipped into the US from sources outside the US.

You would want an unblocked scanner if you want to monitor cell phones (which is illegal in the US). Unfortunately, much (but not all) of the cell phone communication is now digital, which is impossible to decode using any scanner sold anywhere--you need special equipment generally only available to cell phone companies and government agencies, etc.

There are also some cases (such as with some Yaesu receivers, among others), where the scanners block some frequencies outside the actual cellular range in order to prevent images of cell frequencies (intermediate and usually undesirable signals resulting from the demodulation process inside the receiver) from being picked up as well. Sometimes those additional (legally monitorable) frequencies carry signals that some people want to monitor, so they seek unblocked receivers to enable that. So it's not always for reasons of illegal cell phone monitoring that unblocked models are sought (but usually it is).

- Doug

For example, when I am a ham radio operator and want to have a
wideband scanner like the MVT9000 to monitor my own transmitted signal
if there are unwanted spurs in it, then a cellular blocked scanner
really would be annoying. Why buy a wideband scanner, when some parts
of the band are blocked?!

Is it illegal even for ham operators in the US to own a non-blocked
scanner?

Why does everyone say there's nothing left to analog cellular.

I don't have cellular band in my radio, but I listen the odd time to them using image frequencies. And let me tell you, on any given day, during day time hours, those frequencies are going rampant with non-important day to day seemless phone conversations.

And don't tell me it's illegal to listen to them either, because in Canada we have no laws concerning cellular bands.

Here's one:

http://www.sysinternals.com/ntw2k/freeware/portmon.shtml

Or you can make a splitter cable and feed the data back into a second
(and third if you want received data too) COM port and watch it using
Hyper Terminal or someting similar.

I'm probably inviting a flamewar, but I happen to appreciate seeing "for sale" and "for auction" listings (even ebay, gasp) here on Usenet. I don't spend time at ebay unless I'm looking to buy or sell something specific, so the only way I would ever know that some radios are for sale is when someone posts it here. I appreciate anyone who takes the time to find us Usenet/radio fans and let us know what they have for sale.

I think it's well known that cell phone monitoring is illegal only in the US, so if you're outside the US, you can disregard those discussions...no point in scolding a poster who may have forgotten to add "in the US" to the message. We can all act like grown-ups here and forgive that minor oversight.

Not exactly-Section 184 of The Criminal Code of Canada states that anyone
found
guilty of intercepting cellular phone calls "maliciously or for gain"
can be sentenced to a maximum of five years in prison.

I don't know, personally I wouldn't want to leave anything of any
significant value in my checked baggage. Too much likelihood of theft.

If they exhibited their typical condescending
mentality or mannerisms like they do to the paying
dealers/vendors in the outside flea market, this would
not suprise me at all. I'd not even donate a cheap prize
pair of dollar store headphones. BTW we really liked the
condition of the dealer's parking lot this year!
The blacktop of the Hara Arena reminded me of a
cross between the Lunar landscape and the San Andreas
Fault in some places. As someone on the live chat
commented quite accurately: '..the Hara should rent out
their parking lot to Range Rover for Customer Test Drives
during the weekdays'.

> Also I would say that both the flea market and the
> inside vendor numbers were down by at least 20%.
> There were MANY empty spaces in the flea market
> area when in past years it was mostly full.

Year after year less and less sellers. I attribute this to
e-Bay, the cost of selling at the Hamvention and the
ever diminishing returns. 9:00 AM on Sunday was
positively dismal. I would say that fully 40% of the
outside Vendors packed up and left on Saturday night.

This year was our last, Dayton is just not worth it anymore.
Better to sell it online and have the UPS Truck
come to your house and pick the stuff up for
delivery instead of carting it 500+ miles just to bring
it all back home rain dampened again...

> I also heard that Mendelson wanted more space and a break
> on the flea market rental since they are going out
> of business. The Hamvention, based I what I heard
> around, said no dice, so they didn't even bother
> to show up and they're only a few miles from the
> arena too.

We heard the same story making the rounds
among the dealers on Saturday. Probably true.

> They spaced out many of the inside
> vendor booth areas so it wasn't too obvious that
> the number of vendors was way down.
> What did anybody else notice? I hope the above
> isn't a long term trend.

Those spaces were a combination of that and
a small number of dealers who decided not to
go at all the last minute. The hamfest committee
was hoping that alot of people would show up
and pay for a space...like that was going to happen. (!)

I also saw several tables of 100% cell phone and computer
junk which was a major disappointment. I would be
rather PO'ed also if I paid $40 to get in and I saw
standard flea market type vendors selling stuff that
I could see, at any weekend mart FOR FREE and
with no admission charge!

Forget it folks..
IMHO Dayton is finished, stick a fork into it.
It will never go back to what it once was Years ago
despite all the marketing and hype that they make it.
Oh there will always be the camaraderie and the new
equipment showings, but the flea market is just about finished.
Stick to hamfests located with 30 miles of your QTH.

I agree. It looked more like a drive-in rummage sale than a hamvention at
the outside vendors booths.

If it was so bad in years past, why did you go this year. My last trip to Dayton was about 1995 and my impression of the used equipment for sale outside was that it had been carted between too many other hamfests. And there was a surprising amount of non-radio electronic gear and parts. The inside was the usual glitzy trade show and one vendor actually had bikini clad women prancing around.

In my experience hamfests in general are showing lower attendance because of both internet-based competition and the ham radio hobby itself being on the far side of the growth and maturity curve.

In the Hamventions defense it's not their fault as to what is brought inside for sale. They're probably trying to do the best they can to put on a good event.

Agreed, most stuff is going to eBay these days, and no problem with that. Can't really fault a seller for wanting to move his/her equipment rather than waiting another year for Dayton.

I've seen the same here even with local fest's over the last number of years.

Maliciously or for gain. Not for hobby purposes which means scanning a
bunch of frequencies and all of a sudden up pops a cellular frequency.

Yes, but the analog system was running in parallel for eight years
with the digital systems, and those customers who waited for the
bitter end got a really good offer to change.

>Guess the phone companies get the last laugh in eh?

No, I got the last laugh :-) They gave me a really top-end phone at
this time (the Nokia Communicator 9110i) just for free, together with
great conditions. The second great laugh, our company made real good
money in removing all the antennae and radio components throughout the
whole area.

One difference in Germany, the analog system was not designed for
handheld phones, it was mainly a system for car phone usage, and only
a few handheld were in use, suffering from bad coverage. So ging
digital was really an advantage.

Its not illegal in the U.S. to own a non-blocked scanner for anyone.
I have 4 of them myself.
Its illegal to sell them new, and its illegal to actually listen to cell
phone calls if you have one.
I can't say I do either, so I'm not worried about the law in the least.

Is there any of these available to buy?
Instead of punching in the frequency, I'd like to tune it like good
old AM/FM/SW radio.
TIA.

(P.S. I guess then it won't be called scanner but still)

Back when programmable scanners first came out I used to see some of these.
Had one for a while I used to use to listen to the Sheriff. Back then a
Programmable scanner was pretty pricey. The cost has dropped so much now
that there would be no point. Why do you want one? If you are looking to get
a scanner cheap Ebay always has them.

Greetings Jim! I haven't seen any that were just vhf fm, and or uhf fm, but there are a bunch of radios that were made portable that are multi-band AM, FM, SW, VHf, and aircraft. VHF usually covering 118-174. I have a few here. Most do pretty well on 118-136, but are poor at best on 136-174. You will find a bunch of them on ebay, and if you go to thrift stores, flea markets, and yard sales they can be found regularly. I have paid as little as $2 for them. The best of the bunch that I have found is an Aircastle model 162F1 eight band. It has a flip over front with a world map, sort of a cheap knock off of a Zenith Transocianic. It has decent reception on most bands. It is analog tuned so it is not a scanner. Even a cheap lower end old scanner is a better buy than one of these unless you are wanting to add shortwave to your listening. That is the reason I keep this Aircastle as it is decent on shortwave. I have a lot of better shortwave radios, but this one is different. Now that I have blabbered on get someone to wake you up. I hope I said something that was of interest. Have a great week! Jon.

azgreed I did not want to putthe radio in checked baggage...since just one of my radios costs over $600 I prefer to keep that with me if possible you have to pay a little bit for good ham, scanner, and shortwave equipemt. I do sometimes have to explain to security what they are.. often if I let them listen to something they (security) are satisifed...

Hans said it best:

"The correct terminology according to K4YZ is "Musta beem selling
SOMEthing!". I
don't know how you "beem" sell SOMEthing, but I'm sure "Steve" (alias
for K4YZ)
will provide a weasel-worded explanation."

I didn't get the bath robes either.

I would agree...the days of hamfests are coming to a close.

I was a faithful attendee of Dayton until 1999....since then I have NO urge to go since Ebay serves my needs well.

This last summer I went to our local hamfest after not going for ten years...it confirmed that I had not missed anything by not going.

I seriously doubt that the Dayton Hamvention will last another ten years.

I also suspect we will begin seeing manufacturers going the same route as the hobby continues to die out.

It won't die out unless prospective hams choose to believe false statements like "... as the hobby continues to die out". You are attempting to create a self fulfilling prophecy. There are bound to be fluctuations both up and down over the years but at over 600,000 licensed hams we are not yet in any danger of dying out unless people believe unsupported statements like yours.

Dee:

That is all fine and dandy, and a scope goat for the why "hams are NOT dying" mantra... what group(so) are a smaller minority than the hams, and why should anyone (even the FCC) bother with such a small group--when--it can be combined with other users and managed much more intelligently, fairly and cheaply... hams are just not that special--this is all ancient technology they have and deal with, the future needs to combine young engineers and scientists into communications so everyone ends up with a better use of the radio spectrum...

The younger hams should set the course, they will inherit what they build... within one decade many of those holding ham tickets will be gone, in two decades the numbers are LARGE, in three decades those numbers are FRIGHTENING!!!!

Those under 40 would best pilot this ship...

"Those under 40 would best pilot this ship..."

JS> But look at the pilots of the ARRL.

Do you know of a source for reliable data on ham licenses that drills down below the often quoted total licenses outstanding. Are there any studies that estimate the number of active licenses and ages of the holders and how those numbers have trended over time.

Unfortunately I don't have much...only rumor and innuendo.

The FCC statistics are interesting and show what appears to be a gradual decline in membership - The total of renewals plus new licenses is less than total expirations. The FCC staff analysis in 2000 was not exactly glowing in it's projection about the future - kind of a gradual decline. It would be interesting to see the data over a longer period of time but I believe FCC changed it's methods around 2000.

What is missing is how much current licenses are used. With that data we could guesstimate expirations. That would take a study that the FCC doesn't have the resources to fund and one the ARRL may not want to know the answer to.

There may be a point in the future where the new loss of members begins to increase but there is no way to forecast that because licenses are good for 10 years and there is no way to project future expirations because we don't have any idea what current license usage is.

And people under 40 (or under 50, for that matter) aren't going to
bother with Morse Code, for the most part.

It will be interesting to see what the license numbers look like in a
few years in countries that have eliminated the code requirement. Will
the numbers be better there? For that matter, are other countries
seeing the same apparent declines that we see in the US?

you could also put everything into a usb memory card/flash drive.

What wouuld be slick and since the technology is here or about here is to have a USB flash drive port on a scanner that you could program a scanner by just hooking up the usb flash drive and touch a couple of buttons on the scanenr.

Think how slick that would be!

Dee,

I am basing my comments on what I see within the hobby.

When I went to Dayton, I was a member of a group of about 30 members who spent significant time and money to go and we did that for many years.

>From that group, now only less than five people go to Dayton and even those only go every couple years.

These are people who do hold licenses but use them less and less if at all. Many have since sold their stations.

Ham radio is in its twilight years and as the old guard dies off which is happening at an ever increasing rate, the slide into obscurity will accelerate.

As has been noted earlier, take a hard look at the demographics of the attendees of the Dayton Hamvention. It is obvious to the most casual observer that the age of the attendees is heavily weighted to the 50-60+ year range. Give them another ten years and the numbers decline further, it is doubtful that they will have the numbers to sustain the costs incurred to host the Hamvention.

I also think that manufacturers are preparing for this decline. The recent cancellation of the Drake R8B indicates that the hobby is not capable of supporting its equipment needs or the development of new product. The drop in the prices in collectibles such as the Collins line is another indicator that money is being spent elsewhere as interest wanes.

Your thoughts?

TMT

a number of collins gear models continue to bring in " staggering "
used prices .... this and the interest / prices keep rising on
ebay.

to see what I mean go to the " radio: CB, Ham, & Shortwave "
category and type in Collins and then look at the prices that the
640 " closed out " items have brought and be stunned !!!!!!!

used drake gear is right there behind collins too ....

some examples of recent collins sales :
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48700&item=5776496330&rd=1
gasp........
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5776923356&rd=1
double gasp ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5776501846&rd=1
omg .....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5775948196&rd=1
huh ???? ....

Uniden BC780XLT scanner in like new condition.

Features include:

* Motorola, Ericsson/EDACS and LTR trunking
* I-CALL (private-call) trunk following
* Motorola "Control-Channel Only" trunking
* 500 channels (50 channels in 10 banks)
* 25 through 1300 MHz continuous coverage less UHF TV and cellular bands
* AM, FM, WFM, NFM receive modes

Comes with AC adapter, antenna, manual and mobile mounting bracket
(sorry, don't have original box). $225 plus shipping from Southern CA.

(Please remove "nospam" if auto-replying)

Well there ya go! These folk have run their course in Ham radio and are bored and dropping out. Happens in a lot of hobbies

> Ham radio is in its twilight years and as the old guard dies off which
> is happening at an ever increasing rate, the slide into obscurity will
> accelerate.

Any hobby dies out for the person that loses interest.

Making a demographic out of the people at Dayton? Just how many young kids are you expecting to see there?

I don't doubt that the Ham radio population is likely an older one. I also don't doubt that demographics for a lot of hobbies are shifting. It wasn't until my 40s that I started to get enough spare time to even think about a hobby. I tried Amateur astronomy, but the wx in central PA is kinda like Seattle, and I looked into amateur radio. BTW, if you think Ham radio is graying, Amateur astronomy would shock you.

The young ones will come into the hobby. We just have to wait for them to grow up.

> I also think that manufacturers are preparing for this decline. The
> recent cancellation of the Drake R8B indicates that the hobby is not

> capable of supporting its equipment needs or the development of new

Yeah, how many hams do you think ever had a Drake R8B? And of those who do, how many use it as part of their station?

The drop in the prices in collectibles such as the Collins
> line is another indicator that money is being spent elsewhere as
> interest wanes.

Personally I think any price drop in Collins equipment is on account of potential buyers regaining sanity. At Dayton this year, there were a lot of them. Some sold, a fair number didn't. Especially at the one tent where the people were trying to sell them for way over their worth.

Collins is old tube stuff. Fine radios no doubt, but hardly worth the price of a decent new rig.

So many came out this year at Dayton that potential buyers could pretty much call the shots. After all, you can ask for @ kilobucks for an old Collins, but is it worth that much if no one buys it for that much?

Its been a while since I posted to this newsgroup.... but in case you did not know about it check out www.newcastlescan.com

We just had a decent police chase with several vehicles involved and the use of road spikes... TWICE and as a result an innocent driver has had his tyres deflated... is that a first for oz?? anyway the main recording is on the soundbytes page, recorded by co owner of the site Garry....

so check out www.newcastlescan.com and listen to some recordings on our completely free site with over 70 pages of info, pics, storys, free freqs and more.... you can even join our email group.... for free and joing the scanner discussions, shared info, pics and extra soundbytes

Cheers
Mike

PS Garry has now completed his NEW" Scanning the Novocastrians 2005" scanner guide and info on CD in PDF with heaps of extras
for details email garry@newcastlescan.com price is only $AUD15 + postage for up to date info on all major and some minor emergency services including the digital changeover of POLICE in NSW, also covered is air, marine and heaps more

It looks like the bottom line is that back in
June 1997 there were 678,473 licensed hams
and in May of 1995 there were 664,972 licensed hams.
Thats a decrease of 2 percent over 8 years. Its a decline but not by much.

Does anyone have statistics that go back three or four decades??

>price of a decent new rig.
>
>
>
> - Mike KB3EIA -

maybe the value of the radio is in the beholder
or it's applications ....

for example , I have a satori / sherwood modded
, full boat, drake r-4c and a fully loaded FT1000 field ....sitting
side by side .. here in the shack and the so called " old tube
r4-c " blows the doors off my much newer
and more expensive FT1000mp v . the FT1000 receiver
is an embarrassment as compared to the drake on
weak DX in a VERY crowded CW band. no comparison
at all. people tell me that many of the collins receivers can be
tuned up to outperform even the drake r4-c receivers. maybe THAT is
why people pay more for a drake r4-c (I have $1200 to $1400
invested in mine , so far) or collins !! certainly the value is
in the weak signal / crowded band performance to me and
looks like it is to a LOT of other people too.

obviously , for your operating needs, solid state rigs do the job
.... but for those of us that need competition grade cw receivers
...... some tube receivers are still doing a better job. different
strokes for different folks. I've got the best of both worlds and ,
for me, tubes still do a better job in certain applications. (both
my amps < a alpha and a henry > have tubes too) .... I do
use my FT1000 for my transmitter / exciter tho .. ha ha ha ha ah.

k.................

Antiquities are only worth what people are willing to pay for them
including old tube junk. 10 to 15 years ago an old Chrysler Hot Rod from
the 60's or 70's wasn't worth much, now you can't touch one in very good
shape for less than 3 to 4 times the original selling price new. Go figure.

What would be of much more interest is the use to which the licenses are put. A history of how the various classes operated over time would provide a big clue as to what is happening to the service now. Hard numbers are better than the constant speculation I see here all the time. For example a decline in some types of operations could reflect a trend where the technology in use is either unpopular or being replaced by another one. For example AM by SSB. This would even answer the ever present question, and assertion, that Ham Radio is being supplemented by increased computer use and the Internet. Knowing that then the ARRL could spend it's time promoting those things that apparently Ham Radio still had the edge in capabilities. If you want increased license numbers then you have to know how to "market" Ham Radio, and if you don't know what the market wants, or you promote the wrong thing, then you end up with a declining market share, i.e. license numbers.

Well that's straight forward enough at first glance. The sticking point is many don't want a Ham ticket for any reason, they don't even know what it is. The ones you need to ask are those who find they get what they want using other means, computer - Internet, AFTER considering Ham Radio. The ideal place to find that information are the classes the ARRL is pushing under their educational program.

This is an important point because the kids can then make an "informed" choice based facts and first hand experience instead of something they read in a magazine or seen on TV / movies. Also just how many of those kids that do get licensed stick with the hobby? For those that don't these are the ones that have the answers as to why, for example the cell phone - instant messaging fits their needs and interest better. I don't know if the ARRL even bothers to try and collect this kind of data.

>I'd almost bet they are telling the truth...

Why wouldn't they?

If you're going to try random chance at least try to narrow down the number of options, improve the odds of success, a bit. That's only going to happen if the ARRL gets systematic about collecting some useful and meaningful data, otherwise known as market research.

Normally I just sandbag on the side in this news group reading the posts. Most of the arguments over licensing numbers are petty much useless since most don't have any hard statistical data to support their points. I have to admit some of the arguments I've read are very well constructed and logical, but without the hard data it's just all speculation.

The dilemma, if you want to describe it as that, of declining Ham licensees is little to worry about. It appears that some few hand-wringers are making much ado about nothing.

I have noted that, over the years, the majority of new Hams are not joining the ARRL. And for good reason, too.

The ARRL is a dinosaur, replete with septegenarians who are interested in doing things the 'old way'. Many new Hams look at the yearly fee to be a member and simply toss the application in the waste basket. I did this very thing some 25 years ago and never looked back.
After all, who really needs the ARRL? What do you get for your membership? A monthly magazine? Big deal.

I will leave the speculation and 'hard data' gathering processes to others who show an interest in data processing. Their efforts will be of little value in the long term scheme, other than they gathered some numbers and percentages that have little, if any, value in the long run.

Meanwhile, catch me on the HF bands. I'll leave the overcrowded two meter repeaters to the handi-talkie newbies.

All the more reason to upgrade.

In VK, we continue to see a steady decline, both in absolute numbers and in
membership of our national radio body (Wireless institute of Australia)
despite the removal of CW as an comulsory entry requirement onto HF.
However, we are about to see a new licence system introduced similar to the
UK system (which I believe resulted in an increase in numbers there). Age
demographics are pretty much on the "old side" - but there continues tobe a
trickle of young amateurs coming on line - how it will go in the end, not
sure.
On a side note, the use of HF appears to have increased, but not
dramatically and it would be difficult to prove conclusively that this is
the case (based mainly on callback numbers to the weekly WIA broadcasts).

And they think they're hot shit with underpowered radios that barely
cover the noise on the repeater. Two meter simplex is cool, though.

Need a lot bigger sample size though. The younger people that I know find
the code the most fascinating part. The resistance comes from people taking
up ham radio who are middle aged. However neither your sample nor mine is
large enough to draw conclusions.

Keep in mind that any change in rules may take years to have a noticeable impact on the number of licensees. How long has VK been codeless? Has it been long enough to have the hoped for impact? If you change licensing systems, the same questions need considered before judging it.

Here in the states, it seems that the last couple of changes in licensing requirements has had no noticeable long term effect.

"Why not just do what I did, ask the younger people why they are not interested in getting a ham ticket..."

I think the ARRL and the licensed hams need to consider that question too. Most young people don't see ham radio as an up-to-date way of communication. Rather they see the licensing and equipment required as an anachronism. They have numerous highly portable license-free ways of communicating with one another and getting information about the world. Why go through the hassle of getting a license and radio equipment only to find out that the people you work and play with are not on the bands. They don't know what see you on 2 meters means - and when it is explained most of them say but I can do that on a cell phone with lots of people right now.

Perhaps not so obviously. I've been getting into Hollow state
technology recently. Bought a couple olde tube Heathkits and their power
supplies at Dayton, and will restore them. I came into Ham radio (radio
at all) too late for tube stuff, and frankly, the tube rigs seem very
cool to me.

It would seem that you should sell that FT1000 and go strictly tubes if all you do is use it for transmitting. 8^)

I don't find the internet or cell phones to be any competition to
Amateur radio at all. The internet requires the ability to click a
mouse. Cell phones are for yacking on. Neither are technical hobbies.

Cell phones as a hobby? Sounds odd! 8^)

Every student going though the electronics and engineering courses at the college here knows very well what a ham ticket is (the instructor is a ham), and darn well pass any of the exams blindfolded... seldom do they see the need or have the desire when they have tuned the bands and listened...

You think most other colleges are different?

Warmest regards,
John

Before the internet and cell phones, we had television and regular phones.

> Why go through the hassle of getting a license and radio
> equipment only to find out that the people you work and play with are
> not on the bands.

??? I guess your outlook and idea of what Ham radio is is to chat with your buds? In that respect, you are probably correct. If all you want to do is *that*, you are better served by chat rooms or the telephone. Why on earth anyone with that as their main interest would become a ham is beyond me. Ham radio is not the best hobby for that, although we can do that.

They don't know what see you on 2 meters means - and
> when it is explained most of them say but I can do that on a cell phone

A person that gives that sort of answer is never going to be a Ham.

I live in San Diego, Ca, I have a trunk scanner. Need to know the
frequencies in lemon Grove, San diego and all of San diego if possible.
Maybe someone can show me where to find them.

thanks.
Willy.

2488. Connecticut Frequencies?

Dunno. Where I am employed, one of the EE courses specifically ends in
a Ham ticket being received.

My point is that Internet and cell phones are to Ham radio as fish are
to banjos. 8^)

Really, have you seen the new devices by nokia? Surf the web, instant message, download, upload.... cell phones are just about to take one GIANT step for mankind....
http://reviews-zdnet.com.com/Nokia_N770_Internet_Tablet/4505-3127_16-31396042-2.html

The new N770 Internet Tablet by Nokia uses Linux (no fees paid to Microsoft or anyone!--so os is free) will blow the socks off anyone not up-to-date....

Warmest regards,
John

Bill,

You can find the complete VB6 source to my ID Tracker program here:

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Also, Uniden now publishes the control codes for there scanners on their web site. Another good reference is http://www.freqofnature.com/software/protocols.html

Radio Shack scanners (except for those made by Uniden) do not allow the scanner to be actively controlled or monitored through software. Only programming of the scanner memory is allowed which is why I have avoided those scanners.

CW as a requirement for access to HF was dropped as at 01 Jan 2004. There has not been the expected massive increase in amateur licences - I think that VK currently has around 10,000 licenced amateurs (plus or minus a few) - with numbers pretty stagnant/decreasing slightly. I feel that there has been enough time for the expected increase to be visible, but this has yet to occur - maybe the majority of those with an interest in radios already have their licences, or lost interest in the subject - who knows. Onto another part of the thread - age. Most amateurs are older - when I took out my licence aged 23, I was one of the youngest around - going to the first club meeting, I was somewhat dismayed to see that I was the youngest by at least ten years, but at least I had lots of experience to learn from. Nowdays (ten years later), I am seeing young people getting into the hobby, but not in the numbers that I would like to see, nor in the numbers that we need to have a healthy population. Buggered if I know what to do, but the new foundation licence that is due to come in (not sure when as the date seems to continue slipping right) has great promise to at least increase numbers.

I don't think a year is really long enough to tell. In addition, is the word getting out to prospective hams? Did the decrease in numbers come from lack of interest on the part of prospective hams or the failure to find prospective hams? Changes in licensing will have no noticeable impact when people don't even know that ham radio exists or barely know it exists but have no idea what it is all about.

If you are into RACES/ARES or the like, then Ham radio is very useful. What happens when the cell towers, twisted pair & trunked radio systems are overloaded or damaged in a disaster? That is where ham radio can shine. Also it may not be "high tech", but when you build you own Yagi or cubical quad antenna & know that you have to think a little bit to make communication in a certain country (what band to use to make the hop) takes some thought vs. cell phone & internet which takes very little thought. My .02

"Before the internet and cell phones, we had television and regular
phones. "
JS> That is true, we did have television and land line telephones,
with all of their inherent limitations. But the internet provides a
range of communication that is unmatched by any other method of
communication, including 13 channels of VHF, a smattering of channels
on UHF on TV and rotary dial phones.

> Why go through the hassle of getting a license and radio
> equipment only to find out that the people you work and play with are
> not on the bands.

"??? I guess your outlook and idea of what Ham radio is is to
chat with
your buds? In that respect, you are probably correct. If all you want
to
do is *that*, you are better served by chat rooms or the telephone. Why

on earth anyone with that as their main interest would become a ham is
beyond me. Ham radio is not the best hobby for that, although we can do

that. "

JS> Communication is what amateur radio is about...people talking with
one another usually about everyday things or as you say "chatting with
their buds". And it is about the camraderie of people enjoying and
talking about their equipment. And how could we forget band congesting
contesting - how many people one can have a 5 word conversation with
over a set period of time. The hobby isn't about providing useful
emergency communications however. The last time I heard a hurricane
net it descended into chaos with hams trampling over one another trying
to be the first to contact someone in the emergency area. Hams have
not "saved the day" other than in their dreams for a long long time.

If ham radio is about something else, please inform me as well as the
potential hams who see amateur radio as little more than an expensive
and self-limiting way of talking to one another. Or said another way
if you stripped the communications aspect from the hobby what would be
left. And how many people would queue up for licenses?

Hams take a cavalier attitude when it comes to explaining the value of
ham radio, they end up driving the young new entrants away. They find
it difficult to consider new ways that might attract new blood into the
hobby. Hams have to be able to explain what the benefits of being a
ham are. Unfortunately most adopt a bunker mentality that goes like

this: "The requirements are what they are because I had to take them long long ago. Yes morse code is important, but I really can't tell you why. If you have to ask what the benefits of being a ham are, then there is a good chance you won't enjoy being a ham. Please consider another hobby."

No problem: http://www.sherweng.com/presentation.html

This guy obviously knows what he's talking about so shaddup and pay
attenetion, you just might learn something Michael.

> > no comparison
> > at all. people tell me that many of the collins receivers can be
> > tuned up to outperform even the drake r4-c receivers. maybe THAT is

Yeah . . I have a stock late S/N meatball S3B I just might juice up one
of these days. I also have a JRC NRD-545 you'd probably enjoy. Quirky
thing but once you get on top of it it really cooks.

>
> It would seem that you should sell that FT1000 and go strictly tubes if
> all you do is use it for transmitting. 8^)

Ouch: How do you spell clueless? I loves you dearly Michael, you're a
very nice guy and yer heart is in the right place but you have this
frustrating penchant for getting over yer head at warp speed when
discussions turn to even moderately deep-end techie sorts of topics.
You done it again.

This guy is obviously into low-band weak signal dxing on 160/80/40 etc.
Those of us take this game seriously understand what it takes in the
way of rcvr performance. He's talking about using his modded R4-C as an
outboard RX because of it's legendary front end performance, it's
blocking dynamic range and it's third order intercept points as they
relate to successfully dealing with very difficult band conditions.
Which leaves out your Heath treasures and all members of the FT-1000
clan in this particular pursuit.

"If the tube stuff is better, then I'd go for it in a minute" eh? Welp
there ya go.

MAKE ALOT OF MONEY!!! NOT A SCAM PLZ READ Posted By: JASON
Date: Tuesday, 30 May 2005 "Hi, I'm 23 and I make more money than my
parents and so can you" Turn $6.00 into $60,000...read this to find out
how!!! READING THIS COULD CHANGE YOUR LIFE! I found this on a
bulletin board like this one and decided to try it. A little while
back, I was browsing through a newsgroups, just like you are now, and came
across an article similar to this that said you could make thousands of
dollars within weeks with only an initial investment of $6.00! So I
thought, "Yeah right, this must be a scam", but like most of us, I was
curious, so I kept reading. Anyway, it said that you need to send $1.00
to each of the 6 names and address stated in the article. You then
place your own name and address in the bottom of the list at #6, and post
the article in at least 200 newsgroups. (There are millions) No catch,
that was it. So after thinking it over, and talking to a few people
first, I thought about trying it. I figured: "what have I got to lose
except 6 stamps and $6.00, right?" Then I invested the measly $6.00.
Well GUESS WHAT!!... within 7 days, I started getting money in the
mail! I was shocked! I figured it would end soon, but the money just kept
coming in. In my first week, I made about $25.00. By the end of the
second week I had made a total of over $1,000.00! In the third week I
had over $10,000.00 and it's still growing. This is now my fourth week
and I have made just over $42,000.00 and it's still coming in rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that on the
lottery!! Let me tell you how this works and most importantly, why it
works.... Also, make sure you print a copy of this article NOW, so you
can get the information off of it as you need it. I promise you
that if you follow the directions exactly, that you will start making more
money than you thought possible by doing something so easy! Suggestion:
Read this entire message carefully! (print it out or download it.)
Follow the simple directions and watch the money come in! It's easy. It's
legal. And, your investment is only $6.00 (Plus postage)
IMPORTANT: This is not a rip-off; it is not indecent; it is not
illegal; and it is virtually no risk - it really works!!!! If all of
the following instructions are adhered to, you will receive extraordinary
dividends. PLEASE NOTE: Please follow these directions EXACTLY,
and $50,000 or more can be yours in 20 to 60 days. This program
remains successful because of the honesty and integrity of the participants.
Please continue it's success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business your
product is not solid and tangible, it's a service. You are in the
business of developing Mailing Lists. Many large corporations are happy
to pay big bucks for quality lists. However, the money made from the
mailing lists is secondary to the income which is made from people like you
and me asking to be included in that list. Here are the 4 easy steps

to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase "PLEASE PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses: #1)S.R. Johnson : 3285 Lewis Ave. : Signal Hill, CA 90807 #2)B. Hooper : 3 Warringah Gve. : Petrie, QLD, Australia 4502 #3)Matthew Speight : 6 Charnwood Ave. : Belfast : N. Ireland : BT15 5DH #4)Andrew Hunter . 7520-1 South Aragon Blvd . Sunrise, FL 33313 #5)Salvatore De Luca . 102 Overlook Ave . North Haledon, NJ 07508 #6)Marc New, 1/7 Sinclair Gardens, Edinburgh, Scotland, U.K. , EH11 1UU. STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This

will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. REMEMBER, PLAY FAIRLY AND HONESTLY AND THIS WILL WORK FOR YOU!!!

Thanks, already a member, but the database is not specific at to which TGs operate in the Hudson/Bayonet Point area other than west side dispatch. Was hoping to hear from someone who knows the area and how PCSO covers the county...which Patrol TG applies to northwest Pasco county

Hello All,

If you have a BC 780 and looking for a good software program to go along with it.

I have just released a program for the BC 780 called ProScan 780. After 10 months of development, it is here. I believe you will find this program easy to use because of the logical layout but at the same time very powerful. Come visit my web site http://www.proscan.org/index.htm and download the 30 day demo. Looking forward to hearing from you. Bob

There is a file on the internet that is set-up for monitoring San Diego.
The File is for downloading into a Radio Shack PRO-95 scanner.

You can go to www.starrsoft.com and download a program called "win95' (its a
freebie).

Then go to YAHOO groups, and join a group called 'P95'
There will a box, on the left side of the screen that says 'files'.
Select files and then the file for San Diego. Once the San Diego file is on
your computer, run the WIN95 program and select the San Diego file.

If you have a PRO-95 scanner your all set, if not, at least you'll be able
to see how someone else programmed their scanner for San Diego.

Yep, those are the obvious. As I posted, West Dispatch are the obvious ones. Looking more for what patrols are in my sector - those TGs. Hudson/Bayonet Point sheriff patrol - assigned cars, etc. Thanks anyway.

While the current administration would like to make out that the "economy is strong", there seems to be mounting evidence that it is harder for people to increase there economic situation, move up the ladder of success, etc. Immigrants who used to only take 3 generations to get from where they are to the mainstream middle class are now expected to take six generations to do it, if at all. The country is, reportedly, becoming less of a meritocracy, where people move up based on their ability, and more of a "caste system" where people are born to an economic level, and move up only with great diffuculty.

See:

http://www.csmonitor.com/2005/0523/p17s01-cogn.html

This is probably at work for holding back a lot of potential amateurs. You don't go spending the money you might once have spent on a radio if you're 30 yrs old and a technical geek - you now spend it on the rent.

Prosperity is becoming more of a rare thing, with really staggaring numbers of jobs being shipped overseas because their workers will build a software program at a pay of $30K per year, compared with a worker here that gets $80K per year. The general "think" on this by the American public seems to be that the $80K SW engineer here is just too greedy, and deserves to be out of a job in preference to the $30K a year Indian or Russian or whoever. IOW, grassroots opinion is supporting the outsourcing.

So this is probably the basis for how this hobby, and a lot of other hobbies requiring the spending of significant cash, is going to fail - not for lack of personal interest or ability, but from an economic lack of ability to reasonably pursue the hobby. Yeah, we've always sat around and wanted a bigger

tower like Chief Brody wanted a bigger boat - but the basic stuff of ham radio, a decent transciever, is likely harder for the newer hams than it used to be for us. Heck, we had Heathkit! Now, people either don't have good jobs, or their present jobs are so uncertain that they won't spend the money and go in debt for the radio or tower or whatever.

So, welcome to the 21st Century.

What to do about it? The income tax is largely at work here. Corporate taxes make producing things here more expensive. Companies ship their jobs overseas where the aren't taxed so much - if India were to tax a worker there 50%, and take that $30K a year SW engineer down to $15K, is that more or less expensive overall than using the Stateside SW engineer at a 28% rate for that level of salary. 28% of $80K is $22,400. So, that's _more_ $$$ down the drain for taxes here than a 50% tax overseas would be.

Get rid of the income tax, and espcially the corporate income tax, and replace it with a sales tax, and all of a sudden that cheap accounting software package from India that used to cost $200 now costs maybe $260. In the meanwhile, the equivalent product built here, for $250 or so, first has its price go down from the USA-based company not having to pay income tax, and then add the sales tax percentage, and you get a _much_ more competitive USA-built piece of software.

Hooray! Its what we need now... I mean _NOW_.

>I will leave the speculation and 'hard data' gathering processes to
>others who show an interest in data processing. Their efforts will be of
>little value in the long term scheme, other than they gathered some
>numbers and percentages that have little, if any, value in the long run.
>
>Meanwhile, catch me on the HF bands. I'll leave the overcrowded two
>meter repeaters to the handi-talkie newbies.

Well, there's nothing wrong with repeaters, handi-talkies, and newbies. We need the newbies, and having lotsa repeaters is a _good_ thing.

This is 2nd hand from a local ham telling the story of an emergency exercise involving FEMA and a communications network over a local repeater. Everything was going outstandingly when the FEMA guy thought he'd throw a monkey wrench into the works. He went over to the net control guy and told him to simulate the repeater going down. Net control just called the guy with the biggest home signal and told him to tell everybody to go to another local repeater, and the net was back on the air pretty much without skipping a beat. The FEMA fellow said, "How'd you _do_ that?" NC just smiled and said, "Hey, we have backups!"
>
>All the more reason to upgrade.

Always a good idea.

<scanmil@gmail.com> writes

>Does anyone have or know where i can find the pinouts/schematics to
>make a PC cable for the AR8200 MKIII?

The AR8200 manual has details of the connections on the Remote socket on
the side of the radio. Note though that from around November 2000 there
was a change to the Violet and Blue wires.

http://www.aoruk.com/8200bulle.htm#sm8200_add

If you get the AOR "Open ended" cable (we call it the OS8200) then the
cable colours/connections will match the manual.

http://www.aoruk.com/pdf/os8200_ad.pdf

As for the actual "interface" there are quite a few designs that have
appeared on web sites over the years. Most normally make use of a Maxim
(or equivalent) MAX232 or 233 IC (the 233 doesn't need external
capacitors).

Will replacing my scanner's included "rubber-duckie" antenna with a
"whip" antenna or a longer "rubber-duckie" improve reception?

Thank you,
Russ

Typically the longer whip antenna will do more for VHF-Low, ie; 25~50MHz. You can also optimize it for various bands by changing it's length, (if its a telescoping whip), shorter for higher frequencies, longer for lower frequencies. The rubber-ducky is typically more of a wide-band antenna, that provides mediocre performance across the spectrum, but is shorter, and flexible. I've always been afraid of damaging a hand-held scanner when using a telescoping whip, because it's more rigid, and could break the BNC mount in the radio. You can also buy rubber-ducky antennas that are optimized for one band. Radio Shack carries a good one for the 800MHz band, that seems to work very well down into the 450MHz band as well.

2520. Make Thousands of Dollars easily!!!!

Newsgroup: rec.radio.scanner
Date: 2005-06-01 03:13:19 UTC
From: TheNormalEmail@gmail.com
Message-ID: <1117595599.588159.37030@o13g2000cwo.googlegroups.com>
Source record: 13281

READING THIS COULD CHANGE YOUR LIFE! IT DOES WORK!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, 'Yeah right, this must be a scam', but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. There are thousands! No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: 'what have I got to lose except 6 stamps and $6.00, right?' Then I invested the measly $6.00. Well GUESS WHAT!?... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in.

In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.

I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!

It's easy. It's legal. And, your investment is only $6.00 (Plus postage).

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!

If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success

by carefully adhering to the instructions.

You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper 'PLEASE PUT ME ON YOUR MAILING LIST.' Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses:

#1) E. Haynes
3629 Edgar St.
Hannibal, MO 63401

#2) M. Molina
807 Siesta Loop
Robstown, TX 78380

#3) T. Linkous
115 Lee St.
Greenville, NC 27858

#4) E.H. Johnson
P.O.Box 409
Clearlake Oaks, CA 95423

#5) L. Johnson
5700 Ridge Club Loop, #302
Orlando, FL 32839

#6)J. Wine
4502 Jouster Ct, #203
Orlando, FL 32817

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. :)

This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you.This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)

So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------

Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that

everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT :YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again.

The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, 'what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will really work.

2521. Backup Power?

Newsgroup: rec.radio.scanner

Getting ready for the upcoming hurricane season here in FL and wanting to develop an affordable power backup for my radio desk in the inevitable event of a power outtage. I have 3 brand new 12-volt automotive batteries - unused - in my garage. How would I go about wiring to power 4 scanners and a shortwave? All suggestions/directions appreciated.

K

Put all three batteries in parrallel - i.e. connect a wire from the positive terminal of the first battery to the positive terminal of the second battery, and then to the positive terminal of the third. Do the same with the negative terminals. With a multi meter you should see about 12-14 volts - if it is any more then you have not connected the batteries correctly.
To ensure that the batteries remain charged, connect a charger to the batteries (only one needed as the wiring above will ensure that the other two batteries are also charged up) - unless you are using the batteries, you will only need a relatively low current trickle charger to ensure that they are all kept topped up.
I have a number of smaller gelcell batteries (between 7 and 24 AH in size) that I use in a similar fashion. Works well for me. One additional thing, I also have a small solar panel (about 35W) that I can also use when there is no mains power to recharge the batteries (and you don't want to waste fuel running the car). You can also get some small generators (around the 850W size) for very cheap prices (have seen them for as low as $50) - not a bad idea for provision of emergency power, and can also be used to recharge your batteries. However, your three batteries should well and truly last for the time that it takes to get mains power back up and running, but it always pays to be prepared.
My power distribution consists of a small homemade power bar connected to the batteries. It is a plastic box with two strips running the length of the box which are connected by wires to the batteries. From the metal strips I have a number of terminals that the power cables from the radio gear are plugged into. Hard to explain it without piccies, but no can do as almost all my gear is in storage while I am in the process of moving house!
Bit of a rambling dissertation, but hopefully you understand it - if not, query away.

Matt

First thing, you have to be very careful with car batteries in your home! Normally, for backup, you would use sealed GelCel batteries. Some car batteries are vented, and release Hydrogen gas while charging. Here is a link that explains what can happen!

http://www.rayvaughan.com/battery_safety.htm

They make battery boxes with safety straps, to help contain such an event, but I still wouldn't recommend it. You'd be better off selling the batteries you have, and buying some GelCels.

Lark Battery sells GelCels on eBay, and is reasonable. I just purchase a couple to rebuilt my UPS (Uninterruptible Power Supply), for my computer room.

Great info guys! Thanks very much. Have decided to trade my auto batteries for some gel-cell marine batteries, a local guy here will give me 2 for 3, not a bad deal. I also have a huge solar panel setup on my roof to heat my pool, which I dont even use. I'm new to this, would you recommend configuring the solar panels for backup? Would that be better? More affordable? The gel batteries would be for individual radios - ie, the BC780 and the 2006, 895, and 245. But I would also like to run backup (beyond UPS system) for my shortwaves (R-75, R71) and 2 Dell computers, a fridge and TV. Think I could convert enough energy for all of that from the solar pool panels?

I imagine a lot of people who read that article probably feel somewhat upset that emergency services are becoming unaccessible to the every day user. Sure, there is a legitamate need to know whats going on around the city, but I think the reality is that many scanner users consider these things as a form of entertainment and manufacturers are aware of this often capitilize on it in their advertising. I think listening to emergency services is very interesting but i dont let my mouth salivate if some druggy does something stupid down town.

I also notice that scanner users and and a desire for cell phone eavesdropping seem to go hand-in-hand. I haven't listened to other ppl's calls before, but im not going to cry about not being able to listen to cell phones. For me, theres no business deals im interested in spying on, or personal information im interested in taking.. I dont want to listen to some bloke yell at his wife.Or some dumb woman driving down the road in her SUV and baby talking to her kids. Or some horney couple exchanging sugary compliments. Or some college management type yuppie calling a dry cleaner. I dont like any of these people and i dont want to hear what comes out of their mouths, and i would imagine when cell capable scanners become more commonplace more people would agree with me that its not worth listening to.

the time of cellphone scanners has passed with the advance of
technology. most likely there will never be a rebirth of cellphone
scanning , no more than hacking digital c-band satellites,
phreaking, or hacking DTV. time , technology , and legislation
have allowed the makers of portable phones to escape being
eavesdropped upon. myself , I'm quite like you .... I'm not
interested in people's personal calls either . (yes ... I have been
in the past , obviously .... but it's " been there done that "
anymore) thats you and I .... but it's basic human nature
for people to listen to others personal lives and even live their
own life , vicariously , through the lives of others. evidence the
utter and massive world of TV soap operas and the
zillions of people lost in them. (gossip magazines, shock shows
etc.) listening to cellphones (to them , at least) is even better
than soaps .... this because it's real live drama. no actors there.
takes all kinds of people to make a world ....it's all part of
the " rich texture of life " . ... and you wouldn't believe
what the cute teenage girl , next door, and her boyfriend do
.... several hours each night on the phone , before he goes to
bed . WoW ..... smok'in .... ah ah ahaha h ah aahaha

k.............

2533. San Jose PD Air Unit

Newsgroup: rec.radio.scanner
Date: 2005-06-02 04:30:19 UTC
From: Charlie Durand <c.durand@comcast.net>
Message-ID: <SOadnd8HwYPBFgPfRVn-tA@giganews.com>
Source record: 13294

Hi there,

I recently moved to San Jose (Willow Glenn area) and I see what I assume to be police helicopters buzzing around from time to time. I'd love to be able to hear what they're up to.

The San Jose police can be found on 460.325 but I've never heard the air units on this frequency. The damn thing was circling not too far from my house one night and I couldn't find him on any of the San Jose PD freqs I have.

Anyone have any guidance on this? All help is appreciated.

Same thing goes for the life flight frequencies.. I am pretty sure I see the choppers landing at the local trama center from time to time as well.

Thanks!

Charlie

Typically, the solar panels for the pool don't generate electricity -- that's WAY too inefficient -- they simply heat the water which goes through them. There are exceptions, though.

Near where in FL are you?

That's usually the case here in the US, as with any radio: if you can show them that it is a real, working radio, they're okay with it, but they will usually admonish you not to operate it while on board the aircraft. They've been doing the operational-test thing ever since the Lockerbie bombing.

Side note: what you may want to do is check to find out what the ATIS frequency is for the airport(s) you'll be visiting, and put those into memory. That way, you have something for them to listen to when you turn on the scanner, rather than waiting for someone to talk to the air-traffic controllers.

Might try here http://www.pro-92.com/pcifcable.htm and check out the links for two way cables that you can make for a little bit of nothing.
Obviously not specifically for the AE8200, but might well work nonetheless.

I usually travel with a small digital radio (about half the size of a deck of cards). I will listen to FM stations if I'm sufficiently bored (no AM reception even when you press the radio against a window). I will also usually fly with my GPS turned on (Gecko). It's about the same size as the radio. I like to record the track of approaches and landings, as well as to record the exact positions of runway take-offs and landings.

The whole issue of not allowing the use of radio's on planes is bogus. Sure, once upon a time radio's emitted a measurable amount of IF RF, but anything made in the last few years, especially if it operates on a couple of AAA's isin't going to screw up the plane's comm or NAV systems.

The real reason is to ban any form of real-time communication that passengers have with the outside world while in flight. It's a "human factors" reason. I guess the argument goes that if passengers learn while in flight that, say, World-War-3 has started, or if there is a coordinated hijacking combined with suicidal crashing into buildings, that it may unnerve the passengers enough to cause caos on board that the FA's couldn't handle. They'd rather have a cabin full of sheep insulated from the happenings of the outside world for the duration of the flight.

It's the age-old balance between what's good for the individual vs what's good for the group (or society). Similar to the wide-spread use of antibiotics from a public health point of view (it may, or will, benefit the individual, but if enough do it it will harm society in general).

Have you ever wondered why the airlines don't pipe in real-time video or audio into their entertainment systems? I garantee you it's not for technical or cost reasons.

If you live in Willow Glen, I believe your district is the Tom district.
460.475. Air 2 operates on whatever freq the district they're in is on.
If you see the chopper land at Valley Med, it's not Air 2. Air 2 is dark
blue, like the cars and has a VERY annoying tail rotor noise. S.J.P.D.
operate on 480.150, 460.275, 460.200, 460.425, 460.4, 460.325, 460.475,
460.525, 460.100, 460.025, and 460.050

This is pure nonsens. More and more airlines allow direct internet
access, on this way it is even possible to place VoIP-phonecalls.

If you have more than one scanner, you know how radios, speakers, power supplies, and related equipment, can quickly consume your desk space. I was considering building a custom desk console, but I change equipment so often, that anything custom would quickly become obsolete.

I found the perfect solution, and it's very functional, and inexpensive. My local Home Depot, and Lowes carry a products from ClosetMaid. They make storage units, shelves, and closet organizing products. Particularly, I'm talking about their Laminate Storage Stackers. Click here for the link: http://www.closetmaid.com/Look/Product_Catalog/index.cfm

The one I'm using is the 24" Horizontal Organizer (Maple). It cost only $9.95! It's made very well, and looks great! This give me three times the effective space! Just thought I'd pass along the info!

Well I monitor 460.325 and hear calls from my area and once heard the police responding to a nearby fire so I'm pretty certain I have the right frequency for my disctrict, be it Tom or whatever it's called.

I guess when I saw the police chopper hovering near my house they were just watching because I never heard them come on the air. At least not on the frequency I was monitoring.

The helicopter I see hovering from time to time is definitely a police unit. I was also mentioning that on occasion I see what I assume to be medical flights as well. I was curious what frequency those would be on.

As someone else, powering all those things with a couple of deep cycle batteries wont work well. With a big inverter they will probably be flat in about 20 minutes powering up all those things. If you dont want to go with a generater, then perhaps you should consider replacing the computers with a laptop (and purchasing a car adaptor so it will run of 12V), for TV you can get one of those mini-lcd tv's that run off AA batteries. Then just get another car adaptor and run the tv off the deepcycle batteries. Doing it this way will give you many hours out of those batteries before they get too deeply discharged to be useful. I cant think of any easy way to power a fridge without a generator though.

Also another safety tip to keep in mind is that make sure you put a fuse or circuit breaker on these batteries. With two deep cycle bats in parallel a short circuit will mean about 1000amps of current flow, and you can bet whatever shorted out and is now trying to handle that is going to explode. It wont be pretty.

www.airnav.com has all the frequencies of all the US airports. Its very
handy

I just got done traveling across the USA in several airliners making about
six hops with a carry on suitcase full of radios and antennas and none of
the security folks seemed to care about them. What they did get very
excited about was my sealed lead acid battery. Its heavy, black, filled
with lead and has wires coming out of it. The airport security folks broke
into my checked luggage to inspect the battery when I flew out to my
destination and then every security stop wanted to see it when I carried it
home in my carry on bags. They took the battery and re ran it through the x
ray machine all by itself a couple of times and wiped it with the little
cloth that that detects explosive residue and then they told me it was ok.

Even though no one asked me to turn my radios on I agree with Steve that you
should be ready to demonstrate that it works to the security folks.

I took away something different than the other posters.

What makes them think that a 700MHz system won't have "dead spots"
like their 500MHz system? I'm not asking for technical details about
propagation and pentration of 700MHz vs 500MHz. I'd be surprised to
find any radio system in the 500-700MHz range that doesn't have "dead
spots".

They are going from 68% effective to 94% effective. They must have 6%
"dead spots" left over. They could probably spend less than half that
money and fill in their current "dead spots". Anyhow, if their
current system is only 68% effective, they need help NOW. (I'm
guessing 68% is from HT's...add mobile extenders!!!)

How will they be able to expand the system to communicate with other
metro agencies? If they are the first in the nation to move to
700MHz, this won't help.

Sure, the system will allow encryption, but encryption is not a factor
of frequency. You can encrypt on 500MHz as well. Give the narco
units radios with that capability. Again, not a multi-million dollar
expense.

They won't be the "firstest" to spend the "mostest" money.

...just my two cents...

I recently bought a Uniden BC760XLT scanner from ebay. Not having a manual ,
I'm wondering if anyone knows what these buttons do?

DLY
LMT
SRC

Any help would be really appeciated!!

Source record: 13166

DLY - delay - scanner stays on channel for a sec or two after transmission is stopped. this is usefull when your trying to listen to both sides of conversation if there is a pause in the middle.

LMT - Limit -you would use this when scanning a range of frequencys.

SRC - Search to resume or search for next freq when scanning a range of frequencys.

Hi Don. Thanks for the reply, espicially on delay since it was getting rather annoying to listen to a conversation and have the radio start scanning again as soon as one party let off. I am kind of slow today and i am wondering if you can elaborate on SRC ? Whenever i push SRC i just get "Error" on the LCD. There also seems to be no way to scan a specific frequency range, such as 430-450Mhz, without entering every frequency manually. Is this related to the SRC key?

I built my own heavy duty radio desk (from workbench plan I found on the net) and had enough 2x8s left to build a shelf hutch for radios. Adding the finishing touches (some stain and stainless corner guards) this weekend. Will post some pics next week if I can. Very handsome piece of work, if I do say so myself:) The hutch shelf looks kind of like what you linked to, except heavy duty rich stained wood - thick. I simply added stainless corner guards from Restoration Hardware for a good utility look, stained it lightly to let the natural pine stand out. Looks and works great!

That's an easy one. Use the LMT key first, then the SRC key...

For your example below, you would stop the scanning by pressing manual, or MAN, or whatever the button is labeled on your scanner, then set yourself up on an empty channel. Key in 430, then press LMT. Now, key in 450 and press LMT again. Now press SRC, and you will be searching all available frequencies between (and including) 430MHz to 450MHz...

Don't forget that Sunday 12th of June is the 36th Elvaston Castle National Radio Rally.
As usual we have more than 150 traders selling Radio, Computer and Electronics equipment in a series of large marquees, large outdoor flea market and a further marquee for the grand bring and buy. The manufacturers marquee will also be there as usual with displays from Yaesu, Icom and Kenwood.
This year there will be two free prize draws, one from the event organizers and one from the Manufacturers.
The Six Meter Group will be attending this year and as always we have the Reception Marquee with tables and chairs for visitors to use and a wide range of caterers on site.
GB2ECR will be active from the previous Wednesday and as last year will be operating from the Saturday from the Bell Radio (http://www.bellradio.co.uk/amateur.htm) 6x6 ex Russian Army radio vehicle with a special license to operate up to 1kw. This year we we also have a second Russian Radio vehicle adding to the Military display. We will also have a vintage and in service Fire Engine on site during the day. For the rest of the family there is the usual Craft Marquee and we have a some large bouncy castles for the children. The event is held in the beautiful grounds of Elvaston Castle country park where there are many paths through the woods, parklands and round the lakes.
This year the rally program is available for download from the website.
More details at http://www.elvastonrally.co.uk
Entry cost is ï¿½6/car. Talk in is on 145.550mhz.
We hope to see you on the day..

Hi,

I'm new here and hope that someone can help. I have a Bearcat SC150B scanner that I need to replace the antenna. My question is what would be a good replacement antenna be? I listen mostly to the Aircraft band. Some of the one's that I've seen are - Austin Condor, Smiley Super Stick II, Smiley Flexi-Coil and Maxon WTA-1. I'd really like to improve my reception when I buy a replacement. Thanks for any help that can be provided.

Here are a few extra key codes that aren't in the manual...

With the unit off, press and hold the 3 buttons- 2,9, & MANUAL then
turn the unit on to ZERO out all frequencies.

Try the same "trick" only with the 2, 9, and SCAN buttons.
(2, 9, and SCAN) + power, gives these results on BC 760xlt...
My guess would be that this is a test/reset mode.

Channel Freq. Displayed Channel Freq. Displayed
1 30.050 11 127.175
2 40.840 12 135.500
3 49.900 13 66.450
4 138.150 14 76.825
5 162.400 15 87.425
6 173.225 16 806.000
7 406.875 17 857.200
8 453.250 18 888.987
9 511.912 19 911.500
10 118.800 20 954.912
21-100 000.000 L/O (Displayed)

On all channels the bank number is displayed.

Note: The freqs. in channels; 13,14, and 15 are NOT even capable of
being programmed!

Hello:
New at this.

The Norad freq.: NORAD: 364.2

Is this AM ?

Might as well also ask. Where (at what freq's) do the Mil aviation freq's
switch to FM ?
Would this be "narrow fm," or regular fm ?

Thanks,
B.

2573. Newbie Quest: Norad Freq. of 364.2 Is This AM ?

This would be AM. 99.9% of MilAir activity between 225-400 MHz is in AM mode.

There are 3 police helo's that work the valley

SJPD Air 2
Sheriff Star 1
CHP Helicopter 32

So it could have been any one of the 3, and the latter not necessarily
on the SJPD channel for your district.

Althought he first two use Eurocopters with the distinctive and
annoying tail rotor sound.

Ahhh... Figures... Strolled over to Home Depot... Nothing. All they have in ClosetMaid is the stupid wire racks, and wire shelves. Nothing in particle board... They have another brand name which has something similar, Mill's Pride, unfortunately it only comes in WHITE. Thought I'd check HomeDepot.com. No such luck. Same junk on their website.

Which store did you actually get it at? Must have been Lowes. I don't have one of those anywhere near me...

I found some other sources online, however the prices were like $23 to $28 plus shipping. Too much for a little self unit... I did find one on Target.com for $10.99. Price sounds great, until you find out that it's available online only, and they want a second shot of $10.99 for the shipping bringing the total back up there in the $22 category...

Oh well... Guess it's a white one... Maybe a little spray paint or something... One thing that the Mill's Pride shelf has over the one you bought (besides being $3 more at $12.97), is that the middle shelf is fully adjustable, and not at a fixed height...

Mill's Pride can be seen here... Only imagery is available is that of their .PDF catalog, sorry... You will need a .PDF reader to view... Item #C7. Can be found at Home Depot via this number also.

http://www.millspride.com/media/pdf/stor_prodcatalog.pdf

Source record: 13198

I've recently bought a PRO-95 and am enjoying scanning.....

Several times now, while listening to our local police/sheriff channel, I'll run receive an unintelligible message. The voices are very high pitched, sounding like a cross between Minnie Mouse and Alvin the Chipmunk, and I know they're talking but I can't quite understand what they are saying. Superimposed over this is a loud ticking sound.

What have I run into??

Wayne

are " misposting " the ebay urls intentionally ? ..... or is it a
mistake ? the auction locations you are posting (read them
yourself) do NOT reflect the auction number urls.
(only item 577...)

people " can " find your frg-7 auction and the 7 others by searching
" by seller " and typing in your " kk4tl_is_me " ebay ID and then
going roundabout to " sellers items " .

typing in yaesu FRG-7 in a general ebay search also works .....

73s
k.....

Rolling code voice inversion, the "tick" is the sync telegram. Should
be near to impossible to decode this, sorry.

Transcrypt is a common manufaturer of such toys, also AFAIK Daxon.

If it's voice inversion, even if the base freq shifts about, should be pretty straight forward to decode. Any .wav (or whatever format) samples on the net available to download and examine?

B.

2600. RE: New scanner purchase

Newsgroup: rec.radio.scanner
Date: 2005-06-08 09:27:11 UTC
From: "Steve L." <srlynch@pacbell.net>
Message-ID: <PRype.25717$J12.11884@newssvr14.news.prodigy.com>
Source record: 13213

Would someone please tell me if it is worth the extra $50 to purchase the PRO-97 scanner instead of the PRO-95?
I am new to "trunking" scanners, so I don't know what the advantage of having Triple-Trunking vs. Dual-Trunking available to me. I was going to purchase the PRO-96 digital, but my area doesn't have anybody that uses the digital channels right now.
Thanks in advance for the advice.

2601. Pro-94 trunk/non-trunk question

Newsgroup: rec.radio.scanner
Date: 2005-06-08 13:18:49 UTC
From: kuzen001@duke.edu
Message-ID: <d86r7p$l8l$1@gargoyle.oit.duke.edu>
Source record: 13212

I've got a Pro-94 scannner, and I would
like to hear ONE particular user on a
trunked system, PLUS two non-trunked
frequencies. If I use the "HOLD"
feature for the trunked user, the radio
won't scan the other two non-trunked
frequencies. At least, it won't the
way I have it programmed--I'm no expert
on scanning, I just like hearing the
helicopter ambulances.

I thought about locking out ALL the
other trunked IDs, so it would "scan"
just the one trunked and then the two
non-trunked---but the Pro-94 only has
100 lockouts and there are many more
users on this system.

Does anybody with a Pro-94 know a way
I can hear just the one trunked, plus
two non-trunked, frequencies? TIA!

There is probably an easier way to do this, I am no expert at this, but this
is how I do it with a Pro-95.
The city has 2 dispatch, North and South, they are trunked. The Sheriff
has 2 dispatch, they are not trunked. At work there are times I want to only
hear one of the Sheriff, and one of the city. I set up one bank on the
scanner that only has the Talk group for the one City, and the one channel
for the Sheriff. When I just want to monitor those 2, I just turn on that
bank, and turn off the others. I think this would work with your 94 also.
Now someone here that knows more about these may have an easier solution,
but if not this should do what you want.

Alex, many thanks--I'll dig out the manual and see if I can
do this with my pro-94. I don't know anything about putting
talk groups into banks--I just have the trunked system's
frequencies in one bank and the other two frequencies in
another bank. It sounds like if I can put a talk-group ID
into a bank, that'll do exactly what I want--many thanks!

It all depends on whether or not you need L.T.R. trunking.
Dual does Motorola and Edacs
Triple trunking adds L.T.R....

Source record: 13221

First you have to determine ow many 'base' frequencies are utilized. it's likely a small number, likely 8, 16 at the most. If it's a variable scale, it could be a larger number, but again, not an impossible task.

You will have to determine how the key is sent, or if it's a rolling sequence. (a rolling sequence would not require continuous sync pulses, so it's likely the receiver looks for the next key (base freq) and changes the mix frequency accordingly.

To analyze it manually (to at least get some details about the transmission format) just grab a small (perhaps a few seconds) sample and tear it apart manually. Break it up with a computer sound editing program and play each slice repeatedly into a frequency inversion circuit (Ramsay sold one, there are also a few schematics floating about the net) until you recover natural sounding snippits of audio. Splice it all back together and see how it sounds. Document each mixer freq needed, and compare them to each 'tick' data byte. (you'll need a data slicer for this, again, see the net.) This will give you a good selection of raw data.

Just to clairfy things, when I said "...it should be pretty straightfroward to decode." I was not suggesting it would not be labour intense. It could turn out to be a royal pain in the a$$, however, if it's simply inversion with a variable mixer freq, there's no real security there. It would be inconvienent to analyze, but again, the process is straightforward. To automate it will also take a lot of time, but again, unlike with digital ciphering, you're not up against large numbers and even larger permutations.

Is there a sample of the audio somewhere on the net that could be downloaded?

B.

The problem may be that the tick usually has nothing to do with the number of frequency changes. The inversion frequency may change several hundred times per minute, and the tick is just used to keep in sync.

Jim,
Thanks for taking the time to respond; could you tell me what L.T.L. stands for? (As I said, I'm new to "trunking" radios. Thanks

I believe it stands for:
Logic Trunked Radio
It is also known as E.F. Johnson

Okay, so if it's several hundred times per minute, that would definitely change everything. However, if that's the case, would it not be most likely they're employing some sort of sinewave (or sawtooth, or stepwave) 'seed' signal into a VCO which supplies the mixer freq?

It's not impossible, but it may be unlikely the mixer freq changes that often. If it changes too much, then it itself starts to become a problem, because the switching itself will begin to encroach into the audio spectrum. The mathematical limit would be 3000 seed changes per minute, as this would impose a 50Hz noise on the information. I suppose part of the problem is my not ever hearing this type of signal, so I'm only able to imagine what it sounds like. Is the system is truly an analog mangling of the source material? Also, there was another system out back in the 70's where they took the passband, inverted it, sliced it up, and shifted the pieces about. It think Radio-Electronics did a feature on it, including a project for one that broke 300Hz-3000Hz into 4 pieces, mangled them a bit and out popped your encoded audio. It was a symmetrical system.

The more I think about it, it could be a nasty chore to straighten it out. Harris has a system for HF that's straight analog but certainly not easy to decipher, but their's is not straight inversion either. If however, the mixer truly shifts about that much, it's simply not worth the effort, unless you don't mind placing your sanity at risk... :)

The tick that started this thread is at a one second interval......

These scrambled (?) messages occur quite infrequently (perhaps 2-3 times a day) and it is always in incoming message. The dispatcher usually (but not always!) responds in plain talk.

About half the time, from the context of the dispatcher's message, I can identify which field radio the scrambled (?) speech is coming from. And, in those cases I will have heard the same radio in clear speech and will hear it later on also.

Both seems to be in use, depending on the manufacturer.

Check out those sites:

www.transcrypt.com
www.kavitsecure.com
http://www.daxonfil.com/en/index.html

The same here with some APCO25 users :) Often only one person
scrambles, the other not :-)

the sync ticks give it away as hopping " rolling code voice inversion
encryption "

Rolling/Hopping Code Scrambling

This inverts the audio around a frequency which keeps changing. This
requires synchronization of the inversion frequency between sender and
receivers.

The security of this system depends on the combination of how often
the inversion frequency changes and how random the change is. The use
of random codes to specify the inversion frequency allows a high level
of control over the security.

This allows the techniques of key generation used in digital data
security to be applied, yielding immensely large number of codes, and
the added security from these changing frequently as well.

"
http://www.machine-ware.co.nz/Safehand.htm

rather than " muse " yourself into oblivion , why not just type
" rolling code voice inversion " into Google to learn why this is
the " latest and greatest " form of super secure encryption ,
even used extensively by the military.

you'd have more luck breaking into your cable box than
decoding this newer encryption product ......

k.................

2621. Need Antenna Advice

Newsgroup: rec.radio.scanner
Date: 2005-06-09 16:25:53 UTC
From: Rob Ramm <nospamtherammer@hotmail.com>
Message-ID: <3crga1pcvrc5a6ialgpdtud3ojsa7hmpk6@4ax.com>
Source record: 13233

I need some advice on a CLP5130-1 Log Peiodic made by Create.
I have had one of these mounted vertical on a fiberglass mast for 10 years now and it survived many windstorms until last week. It would have survived that one also if my 68ft selfsupport tower did not land on it :)

Anyways, what I intend to do is to repurchase a new one to mount vertical, and also another one to mount just below it horizontal for Television/FM reception. The one I use for scanning I feed with 5/8 hardline and I was intending on putting some Times microwave 75ohm hardline (1/2 inch) LMR 600-75 on the second one used for television,reduce it down to an F connector and put in a regular VHF/UHF preamp that adapts out to the "N' connector of the Create.

My question is, has anyone used these as a television antenna. I know they claim 10-12db gain across the whole band which is what my TV antenna boasted as well. I have seen posts that they do not really have as much gain as Create says, but then, does my Delhi Deep Fringe tv antenna which I have to replace also have the stated 7db gain on VHF lo and 13db gain on VHF-HI/UHF.

Looking at the specs, you would say, they should perform the same. I guess I am looking for some advice as to real world experiences since you cannot believe what is printed.
Do these work good as a tv antenna? You may say this is a bit extreme in cost. The wind loading on these antennas is stated around 1 square ft . Their relitively small "wind footprint" is attractive to me as I am looking for lighter alternative with both being at the top of a new 68ft tower I want to stay up.

Thanks,

Rob Ramm

I would like to buy a new scanner that does military aircraft band and has selectable AM and FM on all bands since I like to listen to the military. Would this scanner be a wise choice?
http://www.uniden.com/productpop/00_productpop.cfm?prd_code=BC898T

Would that be a good one or might someone have a recommendation? I would like to stay around $200.

I am pretty sure no one in my area uses Trunk Tracking, but that could always change.

Thanks,
BTJustice

Even back in high school the cable boxes were never a significant problem... ;-)

I will concur that a high rate rolling code inversion could be a complete pain in the keester, but I also maintain it would not be as secure as an asymmetrical digital system with an exception, that being key changes at a significant rate. If the rate of key changes equal the information rate, then you're flummoxed. If it's much less, then you have a good chance of figuring it out. Speech itself is simply the concatenation of known allophones that can only be serialized in limited and well known sequences, so the number of possibilities of inverted speech is limited. Digital encryption allows the absolute obscurity of the source information. Please don't read into this that cracking analog systems is a 'walk in the park' so to speak, but they are not nearly as secure as a digital system. I initially assumed the source signal was simple inverted speech with a key change once or twice a second; that would be easily deciphered. It would seem this is not at all the case with respect to the communiques being discussed.

That said, there are some valuable cribs to be found in utility communications; call signs, phrases such as 10-4, roger, etc, are dead giveaways to someone on the right track, if indeed they are attacking something with a significantly lower rate of frequency shifts.

2630. New York area scanners -- listen on 42.8 mHz this Saturday!

Newsgroup: rec.radio.scanner
Date: 2005-06-10 07:36:54 UTC
From: chobbs@socal.rr.com
Message-ID: <1118389014.853182.97490@g47g2000cwa.googlegroups.com>
Source record: 13242

http://alpha.fdu.edu/wfdu/wfdufm/index2.html

The clock will be turned back on Saturday, June 11, 2005, when a transmitter broadcasting on an original FM frequency will be switched on at the Alpine Tower in Alpine, NJ, to commemorate the 70th anniversary of the first public demonstration of FM radio by its inventor Major Edwin Howard Armstrong.

A special program, hosted by WINS Anchorwoman Judy DeAngelis, will originate from the site of the world's first FM station in Alpine. The broadcast will begin at 12 noon. It will tell the tale of the difficult birth of FM radio through personal recollections by some of the people who worked with Major Armstrong - including Mr. Renville H. McMann Jr., former VP, CBS Technology Center. McMann worked for the Major at age 14 while in school.

Mr. Tom Lewis, author of Empire Of The Air, is slated to offer his insights into Armstrong's struggles with industry giants of the time as well as the inventor's remarkable impact on all forms of present day communications. The book served as the basis of the Ken Burns PBS special of the same name.

Included in Saturday's broadcast will be excerpts from a recording of a special 1941 test broadcast of the original New England Yankee Network-the first such network to use FM radio links instead of telephone lines to connect stations. A radio dramatization of Empire Of The Air, originally produced by David Ossman for American Public Radio, will be broadcast.

The commemorative broadcast day is scheduled to conclude with the 1954 signoff of the Alpine station W2XMN following the death of Major Armstrong.

For those who do not have an FM radio on the 42.8Mc frequency, the broadcast can be heard through the facilities of WFDU(FM) 89.1 MHz

2631. Web ring of scanner

Dear all,

First of all, sorry but I am a newbie here.
I'm looking for web rings of scanners. Do you have somme good URLs ?

A friend of mine told me that it is also possible to control some REAL scanner through the web ? Is this correct ? Is there any URL to test the concept ?

Best regards,

Pat.

Consider the new GRE PRO-97, sold at Radio Shack @ $199.99. In addition to doing with the BC898T does, it also has alpha-tag display, so you can assign text labels to your frequencies.

Message-ID: <nvydnTMK5ZLFHTHfRVn-sw@rogers.com>
Source record: 13101

Hello All:

I'm having a bit of a dilemma WRT a recent discriminator mod to my
PRO-2006. I've dona a lot of research and looked at it a lot.
So i install a .22uF capacitor to test point 2 and feed that to the
center conductor of a shielded cable to an earphone jack i install
in the rear of the chassis.
So i plug my handy audio cable into the new output and hear absolutely
squat. I mean nothing. As far as i know, yes the output is very
quiet, but even on active channels, there is nothing coming through.
And as an added "feature", the radio now will not scan programmed
channels,each channel has to be gone through one-at-a-friggin-time.
as well, the only way i can get the radio to scann through programmed
channels, is to reset each and every programmed freq into WFM.It's the
only way i can scann through the banks and the squelch will work.

Does ANYONE out there in scanner-land have any thoughts or
reccomendations on this?? I'm really perplexed by this one.....

Mike

A capacitor will not isolate the discriminator output as you found out. If you unplug the audio cable does the radio then function normally? What does this audio cable connect the radio to?

Source record: 13108

I wonder why we have not yet seen a scanner with remote head capabilities from uniden. I know that Scannermaster has produced a remote head for the 780, 785 & 796, but it's way too expensive. If most of the Amateur mobiles have the remote head kits, i'm sure it's no big deal for a company like Uniden or Radio Shack to manufacture one. Even at $100 option is worth it.

I really love my 785 & 796, all the features you can want are in the scanner.

Wake up UNIDEN, get crackin on this.

And what if the passengers of the other 4-thousand odd planes in the air at the time learned of the hijackings and suicide crashings while they were still in the air?

You don't think there'd be some freeky stuff happening on some of those planes if they knew?

When all those planes were forced to land, I bet they were told something like "ladies and gentlemen, this is the Captain speaking. We've got a small problem with (you-name-it) and so as a precaution we're going to make an unscheduled landing. Nothing to fear or be worried about. Just sit tight and relax and we should be on our way again shortly."

Heck, the flight crew never tells you the straight goods regarding the status of your own flight (like delays, ETA, connections, etc) just to keep you calm and not a pain in their side.

The less you know about anything happening in real time, the better. Whether it's about the flight you're on, the goings-on in the cabin, or the outside world in general.

Probably needs alignment. According to the service manual TC6 is the
reference oscillator trimmer. If that is out of adjustment all bands
should be off frequency not just VHF Hi.

Bought the software data loader recommending by RS desk clerk.
Course it doesn't work with the pro-97.

What software does?

Is there a large freq database downloadble online? inlcuding forest service,
local, news, etc?
text id'd? is it sorted by geography? zip code? does it include the mariana
islands?
is it ready to be copied into the software tables?
Are there trunking ID's included?

If not, why not? and who want's to work on it?

win97 works great - http://www.starrsoft.com/software/win97/default.asp the demo works in full, it is just limited to 30 days.

I am not sure if that cable will even work - so may as well reture it. The proper RS cable is 20-289 (it is 24.99 I think)

I'm thinking that one or more dc voltages may be off, gonna start by
replacing the electrolytic caps. Thanks for your input.

Source record: 13126

Antennas for handhelds are usually "rubber ducky" style, that is, short (6" to 9"), rubber-covered, flexible antennas. They are generally designed for a wide range of frequencies, and as such, generally exhibit mediocre performance.

Base antennas vary greatly in style, but are much larger and require mounting to a mast of some sort. Since they are mounted at some distance from the receiver (usually outside), a length of coaxial cable is needed to connect them to the radio. They generally perform MUCH better than handheld antennas.

Besides being cut to resonate at the frequencies of interest, all antennas require a RF (radio frequency) ground of some sort to be effective. Handheld antennas rely on proximity to your body for RF grounding, which is not a very effective way to ground an antenna. Vertical base antennas often use radials (multiple horizontal or downward pointing elements) for their RF grounds, which allows them to be tuned much more effectively, and therefore more efficient with well-controlled radiation patterns. These concepts are just the tip of the iceberg. There is a lot of science and experience involved in proper antenna design...far beyond what I could easily describe here or understand myself.

Ratings for power capacity are irrelevant for scanner use (receive only), but for transmitting applications, base antennas are almost always rated for higher transmit powers. Handheld antennas are generally rated in the 5 to 10 Watt range, while base antennas can be rated anywhere from 50 Watts to thousands of Watts depending on the design.

UAL more than likely had Ch. 9 on at the time the hijacks took
place, then, in one way or another turned them off. Unfortunately, we
will never know.

Actually, there would be a lot of praying going on, and yes,
the occasional fanatic. But, you'd be surprised about how well people
can pull themselves together.

There was an article posted in this very group about UAL890
(B744, NRT-LAX) which had Ch. 9 and the video maps on during the
hijackings. Neither the FAs, nor pilots mentioned anything about what
was going on, until their flight and 249 others were rerouted to YVR.
Only then, did the pilot tell the passengers *and* crew anything. In
fact, it's still out at
http://www.usatoday.com/news/sept11/2002-08-12-hijacker-daytwo_x.htm .

> The less you know about anything happening in real time, the better.
> Whether it's about the flight you're on, the goings-on in the cabin,

> or the outside world in general.

Ch. 9 on any UAL flight, maps on and maps on JBU and FFT
flights beg to differ, as those are in real time.

I'm *thinking* of replacing my Icom R8500 and Yaesu VR-120D with ONE all purpose portable.

Can anyone recommend a good handheld rig? I'd prefer something that can be purchased with no gaps in the frequency coverage.

How about the Icom R20? Or maybe something not yet released but rumored to be in the near future?

Thanx,
Bob

Okay so I have this bc246t and a bc350c. When I scan using them both I'll pick up the same transmission like Thurston Co sheriff 155.5500 and another at 155.5400 and it will be the same transmission/conversation but where one receiver has drop outs the other doesn't and visaversa. It's not like they are divided into separate conversations. It was strange. i can see how this could get addicting.

Can you suggest what, with that knowledge, they could
reasonably have done to improve their chances of landing safely,
beyond listening to the crew telling them to quit running around and
screwing up the balance of the plane.

>
>You don't think there'd be some freeky stuff happening on some of
>those planes if they knew?

I don't know. I'd be inclined to sit there and ponder what
useful action I could take beyond coldcocking those screwing up my
chances of landing safely.

>
>When all those planes were forced to land, I bet they were told
>something like "ladies and gentlemen, this is the Captain speaking.

It's certainly preferable to telling them, "When in danger,
fear or doubt, wave your arms and run about."

>Heck, the flight crew never tells you the straight goods regarding the
>status of your own flight (like delays, ETA, connections, etc) just to
>keep you calm and not a pain in their side.

You're now on the flight crew. What do you do?

>The less you know about anything happening in real time, the better.
>Whether it's about the flight you're on, the goings-on in the cabin,
>or the outside world in general.

Bring along a lot of Sominex on your next flight and you'll be
fine.

Insofar as you are presumed to be innocent until proven
guilty, then being found not guilty equates to being found innocent.
Your view notwithstanding.

If you were to publicly proclaim him guilty (without clearly
expressing that it was the _opinion_ of yourself or others) in view
of the court's determination, you could well be successfully sued for
slander.

That's why the news media carefully use the term "allegedly"
in reference to presumed criminals all the way up to the moment of
conviction. They wish to avoid prosecution, generally in the case of
media, for libel.

My pro-2006 scanner has a bad backlight driver circuit. I discovered that the el backlight element can run directly from 120v ac. I know, I tried it. So why not simply tap 120v ac from the transformer power cord, passed through the light/dimmer switch and eliminate the el driver circuit entirely? Anyone tried this or see any reason not to do this?

Other then the risk of electrocution, it ought to work.
One of the things Ilike about 12V radios is it hard to
get killed working on them. I operate all of my
radio gear from a +12V Lamda supply.

If you get across the EL driver in the 2004, it will bit
you, but won't kill you, or at least it didn't kill me.

I would be sure to put a label on the ouside and inside
warning of this mod.

I bet you driver trasnsitor died. In the '2004, it is Q701
and is a 2SC945QA, or the dimmer switch opened.

The '2004 and '2005 are very similar, I would guess the
'2006 is also.

>

I have to respectfully disagree with Mr. Parnass on this. The situation he describes has not been true for some time. At least since the time of the Icom R-8500.

Icom and Uniden both document and publish their command sets. I downloaded them from public manufacturer web sites. They will provide this information for the asking. Uniden has already released the command set for their upcoming BCD-396T TrunkTracker IV scanner on their web site. Icom makes their command sets available either in documentation provided with the unit or from their web site. The rig manufacturers don't want to be in the software business (and Icom should get out of it because their software is terrible IMO) and they know that software availability sells radios. Now, they may not give it to you before it's widely available . That's a different kettle of fish.

The part I disagree the most about is the importance of the GUI. The user interface is CRITICAL! If you don't get that right it doesn't matter if you understand how the radio works or not. The user won't use the software. Believe me, I have tried this and the GUI is the hard part. I had a program working with an ICOM R-8500 in an afternoon. It could do the basics, command the radio to scan, read back the frequency, set the frequency, etc. That's very straightforward serial interface programming. ActiveX controls make that part trivial.

The GUI was a bear! Drag and drop, multi-column tables, setting functions, etc. takes a lot of thought when laying out the interface. The radio is fairly complex and doesn't have the best control layout to begin with. Making that into a useable interface is tough.

What I would like to see in radio software is the following...

1. I WANT TO BE ABLE TO DIRECTLY IMPORT CSV FILES FROM THE PUBLIC FCC DATABASE!

I should be able to do queries from the ULS, get the result as a CSV and import that result into the program. This is not trivial to program but not impossible either. This feature should be standard and a central feature of the software.

Export to CSV should also be available so I back the radio memory up.

If you really get modern, do all the memory management with XML.

2. Be able to layout the memory by dragging and dropping the frequency memory entries. In other words, you download the radio memory to the program and work with it there, then upload the result.

Example: Louisville Metro PD channel 2 is in location 474 and I want it in 389. I should be able to drag it (or cut and paste) to 389. I should not have to re-type it. This is supported in every modern OS. There's no reason not to implement this.

Also for this one, use checkboxes for on/off features and pulldowns for the multiple mode settings. Picture a spreadsheet and you get the idea perfectly.

3. The design of the software should be oriented to frequency memory management, not remote control. There is no need for remote control by a PC for most applications. The radio works fine standing alone and you want to be able to use it without a laptop (unless it's a WinRadio, duh! I know that..) if you want to. Full blown remote control of a rig should be a secondary "nice to have" feature.

4. If you provide audio recording inside the application, implement it properly using a standard media format like MP3. By properly I mean with a clear user interface. Make sure to implement some kind of metadata tagging so that a person can actually tell what the recorded content is. Frequency, callsign, description and time is a good place to start. The ID3 tags support this. USE STANDARDS!

In general, write your code as generically as possible. Keep all the rig-specific controls in a separate DLL or other library. This will let you implement different radios with very little additional work. What you need is a program that implements common features that all radios have, then specialize in product specific features like trunk tracking.

Do not dumb down your software because some idiot might be "confused". Someone who is easily confused probably can't get the software installed and the radio connected to the computer.

Visual Basic .NET is more than enough to do this job.

It would be worth your time to study the scanner market and figure out where the need is. If the Uniden scanners are the market leaders, write

your code for them first.

Write a good application, install tough commercial copy protection (authorization keys at least) and go for it! If you write a good one, I think people will come because most of the available software sucks, some loudly.

I have had the 898 for about six months.....good radio. This radio has much high I.F. gain in the AM mode than previous units. It also has dual bandwidths for NBFM modes, so it will be good for the new splinter frequency assignments.

Pete

keep the 2006 and forget the 2042. the 2042s had NO internal
shielding to speak of and had VERY easily overloaded front ends.
this causing a LOT of overload , spurious , and intermod issues that
the 2005 / 6s did not have.

the inside of the 2042 is a simple circuit card inside a plastic box.
the 2005 / 6s had many shielded compartments and a lot of bypassing.
when using either the 2042 OR the 2005 / 6 with the preferred
" Probe " software (when using the opto boards accessory) ...
the abilities of channel selection and amount of channels
scanned (unlimited) is controlled by the computer anyway .....
making the basic channel abilities of the scanner unimportant.

the 2042 looked better than the 2006 and had that nifty manual
tune knob.... but " in real life " ..... when using an installed
Opto board, one NEVER touches the radio in normal use so either
is unnecessary. BOTH radios can track at very high channel rates
using Probe software (50 - 70 channels per sec) and neither is
superior in that respect.

if you must use the 2042 with the opto board , a " must have "
accessory is a Stridsberg milticoupler . this , not for the multi set
capability it provides , but for the " small ' amount of gain and
enormous front end overload protection (31 dbm of 3rd order
IP3 and 17 dbm of P1) it provides. nearly ANY consumer
scanner needs one of these, but the 2042 especially benefits
form using one of those.

the 20 digit " secret code " (available all over the web) unlocks
nearly all of the opto boards that were ever made... except
for the more recently made boards. older opto boards are preferred
for this reason. this is a " serious " issue on the (normally)
unlockable 2042 because it needs an older opto board to
open it up completely. (and is ONLY opened up under computer
control)

k.........

I have two BC-245 scanners in very good shape. I can only find one box and one programming cord so I would like to sell them as a package deal.
One has a 1600 ma ni-Mh battery and I have a heavy duty leather case that I will include. Asking $220.00 plus $10.00 shipping.

One Pro-60 in very good shape. Military air band covered in this scanner. A nice handheld for air shows.

One BC-350 in very good shape asking $50.

If anyone is interested please reply to wfm013@yahoo.com

thanks
bill

Attended another airshow today taking along my trusty Pro-60. Met a fellow with a Radio Shack something that had 1000 stored channels and a very fast scan feature. Impressed but when I browse the Radio Shack site I see several possible versions.

My primary interest is aviation, civil and military, VHF and UHF. Wondering what is recommended these days with a $200 ballpark upper limit?

In the original posting which began this thread, Bill Carty asked about
the Radio Shack PRO-95 scanner. The PRO-95 is made for Radio Shack
by GRE, which does not make the memory layout and cloning commands
freely available for their scanners.

> Icom and Uniden both document and publish their command sets. I downloaded
> them from public manufacturer web sites. They will provide this
> information for the asking. ...

Some ICOM radios can be remotely controlled while others can
only be cloned or configured via software.

ICOM publishes remote control commands for some of their
models, but they have not freely published the information needed
to write configuration software for their "clone only" models. To
obtain this information requires signing a nondisclosure agreement.

The Uniden web site requires that one agree to
a series of preconditions before downloading the documentation for
their commands. That includes the BC396T documentation at:
<http://uniden.com/productsupport_downloadfile.cfm?product=BCD396T&dwnld_id=67>

With these criteria, you want the PRO-97. The PRO-95 doesn't have
mil-air coverage.

My guess they did not change the simple command language they used on
other scanners. Try software for a 2052 and see if that works for you.

Source record: 13064

After listening to the radio for several months using the AC power supply I decided to take the scanner mobile and when the AC supply was disconnected the scanner went dead. Checked the rechargable batteries and all was good but no sound. Put in the other battery pack with the regular batteries and still no joy. Has anyone else out there come across this same type of problem. I suspect that there is a fuse for the batteries inside the radio but don't want to open it up just yet as there may still be warrenty

Bill

Source record: 13066

This happened to me once many years ago with a portable radio. I left the barrel connector of the power adapter plugged into the radio for almost a year. What the problem turned out to be was the spring contact inside the DC jack had been compressed for so long (and obviously made from unsuitable metal) it lost its ability to spring back once the DC barrel plug was pulled out of the socket. I had to open up the radio and replace the DC jack with a new one.

This may or may not be the problem with your scanner, but a good test would be to try it again on the adapter. If it's okay on external power, but the thing goes dead once the plug is removed from the side of the rig, this may likely be the problem.

Good luck!

Friends
Does your local Radio shack market scanners at all? Our local Radio shack franchise store doesn't. .Even tho they were told to set up and display a Radio shack Pro95. It sits there on a shelf unplugged. When I go in and clone it they keep it on for the time being. When I leave it looks like they unplug it and remove the batteries and leave the batteries out. I go in to see how things are going with it. There it sits unplugged. The memory is gone because they leave the batteries out for extended periods of time. They were TOLD to market scanners. They say they are trying. .They're not. Why can't they get a simple case. Put a Pro95 Pro96 and Pro97 in it. Program them and you've done something. You've put the Radio back in RADIO SHACK! YAY! Steve

When I got interested in getting a Pro-95, a couple of months ago, I
went into our local Radio Shack and asked to see one. I was told "We
don't sell scanners." I advised them that both the catalog and the web
site showed that the did. The clerk told me "Radio Shack has
discontinued doing scanner.....we can't get any more." I tried once
more--insisting that even if _they_ didn't have them, RS was still
selling them. Again the clerk said "We've tried. We can't even order
scanners any more, RC has discontinued them.

I drove nearly 50 miles to the next closest (I live way out in the
"sticks" up here in the upper left corner) RC where they had a large
display....told them the story and they almost didn't believe me until
they called my local store and inquired--and were told the same thing!!

I would have to "guess" the stores are a franchise? I guess some store
owners don't want to sell them for some reason, who knows why. If that's the
case, who cares? Buy it online.

The modern day radio shack is just a world wide corp. selling gizmos and batteries - the employees knowledge of electronics is non-existanant.

Employees don't really have to know what they're talking about - just show up on schedule and know where to find the product in the back room is about the extent of what's demanded of them...

And it shows...

YMMV.

All they know how to sell, or want to sell, is cell phones, and extended service polices on anything else you might buy. It's a joke.

Scanner radios is one of their high-ticket items. You'd think they'd be really pushing them. Strange.

This may be an obvious question, but are you certain you're using the correct battery holders? The black one is intended for Alkaline batteries. If you're putting your re-chargeables in there, they won't recharge. You need to use the yellow battery holder for re-chargeables. Also make sure you're inserting the battery holder into the radio properly. It has metal contacts that need to mate with the ones in the radio.

Apparently, they did change it. The other software will not work. The person who writes the Scancat software has said he is waiting on Radio Shack for info to finish his software. And someone else (I don't remember his name) has stopped all development due to this problem. So this is a good scanner, but maybe not one for computer connection.

I'm selling for a friend, the following:

Radio Shack PRO-2006, with the following Bill Cheek Mods, and their original cost:

003D: Speed - 16MHz $47.00
004: Squelch $28.00
011: MOV Transient Protection $40.00
044: Data Squelch $49.95
029: Extended Delay $100.00
026B: LED S-Meter w/Mod #25 $85.00
027: LED Center Tune Meter $85.00

This radio has sixteen LED's on the front panel, 3-red, 4-yellow, 8-green, and 1-orange! It also has five toggle switches on the back, and an external jack for an analog S-Meter!

The radio is in clean, excellent working, and cosmetic condition! However, no box, no antenna (easily replaced), and no manual (PDF copy supplied). Blue backlight on display is working fine!

He's asking $275.00 + shipping. If you've been looking for a PRO-2006, this one is a classic!

Bill Crocker

2714. 27.620 FM Repeater heard ! (new rare 'DX catch')

Newsgroup: rec.radio.scanner

Exercpted from The KY4KY News : http://ky4ky.com/fyi.htm

(6/19/05) Floating Freeband (FM) Repeater On * 27.620 *

If you hear what sounds like a repeater outputting in the spectrum
between the 11 meter class D citizens band and the 10 meter
ham band, it's not an illusion. Rather it appears to be the creation
of some enterprising Freebanders who are operating this
latest, unlicensed repeater.

According to several reports received by Newsline, and others
posted to various Internet websites, the system in question
outputs on 27.620 MHz FM. It also seems to be located
not far from Pennsylvania's eastern most border.

But there is the interesting part. While it's not yet been
verified, the word on the street is that the input kind of floats
around the low end of the 10 meter ham band. There is some
speculation that the operators of this repeater monitor
the input frequency and move it when ham radio operators
running legal high power Morse come on the air on top of it.
At least there have been reports of strange announcements
which may be information to users as to where the input will next be found.

One Internet post describes this machine as one of a new
breed of Freeband roving repeater of the type first noticed
in the St. Louis area about two years ago. That is, those
who run these systems are physically moving the frequencies
and the geographic location of the machine to avoid detection
by ham radio T-Hunt squads and the FCC.

This is just the latest report in a string of 11 meter repeaters
that go way back to the early 1970's when
Freebanders - then called H-F'ers -- began tying together old
crystal controlled 11 meter AM transceivers as repeaters.
Most had outputs on channel 1 or 2 and inputs on CB Channel 40
or above. None worked very well and most were soon abandoned.

Note: We heard the "27.620 Machine" just before noon today in SE MO.
No word yet of they have a "QSL card address", although if they do this
\would be a RARE CATCH to confirm.

The Charleston and Little Rock freeband repeaters are linked
to business band repeaters and a seldom used ham repeater in one
case. There is a set up in Nashville where a repeater is cross
linked to repeaters in three other radio services.

OK.....

What SPECIFIC FREQUENCIES do they operate on then ??

Please provide your list of the same or a URL with info on the same.

Thanks!

Mogoo Mobile Search Service Launched -- www.mogoo.biz ---2024598735 ---
MSN: mogoo_inc@hotmail.com
Search with text message on your mobile phone, anytime, anywhere! It's FREE*!
Mogoo Services
+ Price search (comparison shopping)
+ Coupon & Rebates
+ News
+ Weather
+ Real-time Stock Quotes
+ Local Business Directory
+ Driving Directions
+ Traffic Info
+ Movies Times
+ Flight Updates
+ White Pages
+ Music,MP3 & Ringtones
+ E-mail Notifications
Wish to make a comparison shopping? Like to get the show time for movies playing near you? Want a driving directions to show you where you want to go and tells you what you'll find when you get there? Need to find the number of your favorite delivery place?
All these seem not to be easily satisfied. But now with the emergence of Mogoo, everything is easy! Just with your mobile phone, Mogoo will solve all your problems after pressing few phone-keys.
What is Mogoo
Mogoo is a mobile search service that gives your cell phone the power to get other instant mobile information wherever you are and whatever you want.
Who can use it
Any cell phone capable of text messaging can use Mogoo services to quickly access the information. Best of all, it's free and no registration is required.
How to use it
Use Mogoo services according to the following steps:
(1) Enter your query as a text message (tips for how to query specific areas can be found on the "Query specific areas")
(2) Send the message to the short code number: 2024598735
(3) Get your instant information back within 10 seconds.
Tip: For ease of use, store the number 2024598735 as a contact in your cell phone address book.

Don't know about the others - How would 10 little led's and a few
resitors/caps cost $85 ?
Just curious.
I did those mods myself and doubt if they cost $5 each.
Of course, if your adding the hourly cost of a union journeyman electrician
installing the circuit, maybe that would explain it.

The 2006 was/is a great scanner, and your price seems reasonable I guess.
No need to wildly exagerate the costs of the mods.

I'm not exaggerating anything. I'm just pointing out what the mods, performed by Bill Cheek, originally cost. I have the original receipt also. Considering this radio, has over $400.00 worth of modifications, by Bill Cheek's pricing, and that the radio itself cost around $300.00 at the time, I think $275.00 is a fair asking price. We've all seen these radios without any modifications go for much more than that, at times. Not everyone is capable of doing this type of work. The disassembly of the front panel, and the precision locating, and drilling for the LED's is a real challenge in itself. Someone who is a collector, or who appreciates/wants the modifications this radio has, would be happy to get it. It is very clean, and in excellent working condition.

I don't disagree that the asking price is fair.
I've performed most of the same mods, and more, and know the parts and
labor involved.
If your considering labor charges, then theres no good way to put a rice on
that.
If its just parts then the costs of the mods is nowhere near what you said.

>> the scanner went dead. Checked the rechargable batteries and all was good
>> but no sound. Put in the other battery pack with the regular batteries and
>> still no joy. Has anyone else out there come across this same type of
>> problem. I suspect that there is a fuse for the batteries inside the radio
>> but don't want to open it up just yet as there may still be warrenty

FWIW, if it's like the PRO-95, the battery cover won't seat if
the holder isn't correctly oriented.

2725. Petition to Deny Renewal to K1MAN

Newsgroup: rec.radio.scanner
Date: 2005-06-24 21:40:37 UTC
From: policy-ham <hamop_62@hotmail.com>
Message-ID: <1119649237.556139.108330@g43g2000cwa.googlegroups.com>
Source record: 13087
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,rec.radio.cb

Do any of you know about this on line petition to the fcc
to stop them from renewing the ham license of K1MAN? I found
it on eham.net.

L.L.

Petition to Deny Renewal to K1MAN:
Brian (K3VR) on June 15, 2005

By now, you've probably heard that K1MAN has received a large NAL
(fine) from the FCC, for Broadcasting, Wilful Interference, Lack of
Station Control, Failure to File Required Information, and Pecuniary
Interest.

Even if K1MAN were to pay this NAL, there is no guarantee that his
obnoxious behavior will change. If he were to lose his license, and yet
still continue to transmit, at least the Government could seize his
equipment.

The fact is, K1MAN has received lots of letters from the FCC over the
years and nothing to date has stopped his trashing of Amateur Radio.
For this reason, I believe he should permanently lose his license to
transmit over amateur radio.

As it happens, K1MAN's license is due to expire on October 17th. The
FCC already has a procedure in place where we, and the rest of the
listening public, can make our voices heard regarding K1MAN's license
renewal.

I propose we use the FCC's standard procedures to file what's known as
a "Formal Petition to Deny Renewal." Basically, the petition would be
signed by all of us who believe K1MAN's license should NOT be renewed.

As it happens, there is a website being written right now to accomplish
this task. The "Petition to Deny License Renewal to K1MAN" is in the
process of being written by Keith Lamonica (W7DXX).

Based on K1MAN's on-air behavior, we will ask that the FCC not renew
K1MAN's license this fall. I've already begun collecting comments.

All you need to do is indicate in writing, that you believe K1MAN's
amateur radio licenses should NOT be renewed.

Referencing his NAL letter, send your comments to:

Brian Crow
2550 Mosside Blvd

Suite 212
Monroeville, PA
15146

Include your comment in favor of the petition to deny license renewal to K1MAN, along with your name, callsign, address, signature, and a daytime phone number for verification.

Your comments will be submitted to the FCC along with the petition. Even a postcard with the required information will do it. If you have a lot to say, send me a letter.

Please join me in supporting this Formal Petition to Deny License Renewal to K1MAN. We need YOUR comments!

The website and petition, now in progress of being completed, is located at:

http://www.no2k1man.com/

Thanks for your support!

2729. Radio Shack pricing schemes

Newsgroup: rec.radio.scanner
Date: 2005-06-24 23:23:49 UTC
From: Jim <chief_jim@go.com>
Message-ID: <zD0ve.1729$ZD2.883@fe09.lga>
Source record: 13090

Been considering the PRO-97 scanner. Printed the data sheet about a week ago. Price was $199.99. This week it shows $219.99.

Wondering if they are practicing the old Sears routine of raising prices for a couple of weeks only to advertise later $20 off. Netting the same previously non-adjusted regular price.

2730. Not Receiving Transmissions

Hi, I am new to this board. I just bought a R/S Pro 95. Bought Scancat Lite Plus to help with programing. I have a list of all the trunked frequencies and talk group ID's in my area. Got them all programed in, Sheriff's Dept, Police Dept, Fire Etc. I am hearing trasmissions from all of the above. However I am not getting anything on the three High Patrol channels. I double checked the Group ID numbers but I am getting nothing. Any suggestions????? David

Baxter lives in Massatoosets, or is it Massatoochits? Or in Massa Two Tits?
Any way you cut it, however you spell it, Glenn and his Blabfests are
hopefully going to be a thing of the past.
It will be interesting to see if Baxter will go down with both guns blazing
as he cohosts with arrogant Richard Whiten, ex WB2OTK and fellow jammer by
his side.
That $21,000 fine is sure to put a dent in his coffers, even for a
"professional engineer" of his self-proclaimed high standing.
Hey, Glenn. Ever entertain the idea of initiating a legal defense fund? I'll
donate two cents.

ROGER WISEMAN'S GREYHOUND MEN'S ROOM BAND
```

Lead vocal: Dr. Winston O'Boogie

It was twenty years ago today,
Roger Wiseman forced the boys to be gay
He's been going in and outa their rears
And he's made them into ravin' queers.
So watch out or I'll force on you
The act we've hated all these years,
Roger Wiseman's Greyhound Men's Room Band.

We're Roger Wiseman's Greyhound Men's Room Band,
Disciples of the Bucktoothed Choad,
Roger Wiseman's Greyhound Men's Room Band,
Sit back and watch us shoot a load.
Roger Wiseman's Greyhound, Roger Wiseman's Greyhound,
Roger Wiseman's Greyhound Men's Room Band.
It's wonderful to be here,
But Wiseman's full of crap,
The dirty goddamn pederast:
That fucker gave us syphilis,
That fucker gave us clap.

I don't really want to stop the show,
But I thought you had all better know,
That Wiseman's going to play a song,
On a stickpin that he stuck through his schlong.
So let me introduce to you
The one and only Bucktoothed Choad
And Roger Wiseman's Greyhound Men's Room Band.

" no lectures please " ..... ha ah hah aa trippy.

let me see now !!! ..... if I understand this correctly .....
you want someone to list the location of a store or site
selling equipment that violates US federal laws ..... and
" extra points " for people that will " relate " their
experiences (right here in front of everyone)
while committing federal felonies , using this illegal
equipment !!!! is that right ??? ha ha ha ha ha ha

this has got to be one of the most LAME and
shallow " sting " attempts that I have seen in some time
(and " I " have seen a bunch) .

heck , while you're at it ..... " everyone here that has
a murdered body buried in their back yard ,
please raise their hand too !!! " (no lectures please
ah aha ha ha)

well kathleen , looks like you have really thought this out
eh ???

k.....

Sorry, but it would be illegal to import or sell such a device in the
USA. That is the long and the short of why they are not for sale.

Is this just an excuse to bitch about Radioshack?

Radiohsack has done this with many products over the past few years. If it is something that is high in demand, they will raise the price as would most companies that are looking to maximize profits

I bought the PRO-97 when it first became available, adn I think the extra $20 for it is reasonable. I think it is worth $220.

Although.......

The knob set does give it a somewhat cheap feel. Easy to fix, go join the PRO-97 yahoo group to see pix of the rig with an alternate knob set

Hi,

Anyone out there running a WinRadio 1550E and also using the Client/Server
software? We are having some difficulty getting ours to stream the audio.
Any experts out there?

Thanks,

Eric Homa

Hey Babe, If you can con enough people to get yourself elected to
a Council, you certainly should be able to use Google to find out what
your asking.....Secondly, If you had a CLUE about the technology that
you are asking about, you would know that these devices are not FCC Type
Accepted for use, or sale inside the US..... thirdly if you had Brain1
in'your whole head, you would know that every National Guard Signal Corp
Unit has some on the shelf ready to use should the Civil Authority,
require that service. We all hope that you are just a LAMER..... but
if you really are on the "for real", please "Get a Life" and "Go Away"
real soon......

Me who thinks maybe you are a Moorroooon (bugs bunny definition)

>scanners any more, RC has discontinued them.

Here's what I would have done:

Asked the clerk for his name and the name and phone number of his
district manager. If he asked me why, I'd reply that I want to confirm
Radio Shack's decision to discontinue carrying scanners. If he didn't
cave in at that point, I would call the district manager right then
and there from my cell phone, ask the question, and then explain that
<insert clerk's name here> at <inster store number and/or location
here> is telling me that RS no longer carries scanners. If necessary,
I'd hand the phone to the clerk and have him tell his DM what he just
told me. Then I would have watched as the clerk began wincing from the
tongue-lashing the DM would give him.

Within a week or two, that store would have a new manager... And there
would be a full line of scanners gracing the shelves. And that lying
punk of a clerk would be gone, as well.

I have an Icom R3 for sale with a copy of manual.I have no original box for it.It is the unblocked version.I am asking $300.00 or BRO for it plus shipping.Email me if interested.
Reason for sale is it is to complicated for me to play with.

Well, since I'm in Canada, RS is not even an issue as far as buying gear.
I'll tell you one thing - I had a similar experience - even to the point of
showing the the Cat. Number, and was willing to pay cash on the spot. The
'manager' - then told me - "Even if you order it today, it'll take 6 weeks
before we can get the item. Besides, the radio you want won't pick up
Ambulance, Fire or Police was they use "SPECIAL TONES" that are scrambled.

We were talking about the Pro-95.

I calmly waived the 600.00 cash in her direction, and said 'thanks...think
I'll go elsewhere.".

They didn't even try to dissuade me from leaving! Unbelieveable. I went
elsewhere and bought a great scanner for less, plus I received a floppy of

local freq's and a printout of many more useful freq's that were active in my area. I received a free leather case as I purchased on a 'sale-day'.

For plugs, wire and misc electronics I'll still go to RS if I have to. Anything over 10 bucks, I take my business elsewhere.

If I had time, I'd post the real story. It's a funny story, however it's a very sad indicator of the Radio Shack chain's refusal to help customers.

Mike T.

should not be a problem, I take a couple of handheld scanners and a large shortwave (sony-2010) with me when I travel all the time

I sometimes need to explain why the 2010 has two sets of batteries but other than that no problems.... I also take a coil of wire and some alligator clips with me to use as the shortwave antenna

Must have relatives there or something Christopher. Why else would
someone want to sit on a plane for umpteen hours, just to get to
a God-forsaken place full of poisonous critters of all kinds on
land, and in the water, including probably the biggest Great White
Shark population on Earth. Oh, and the people walk around saying
"maeet" all the time, and their ancestors killed the natives for
sport. And that area between Perth and the east coast is
the absolute garden spot of the world. Swell place, Australia.

Of course it's legal! Granted, once you get there, if you go into the
bush, it's gonna be deaf.

Took my AR8200 into the bush in 2001, (Flinder and Gawler ranges, SA) and
didn't get any comms, DUH!

I'd suggest bringing one of the new scanners with "near field" frequency
features. The pro 83 or pro 97 (in my stable) but don't know what steps
and bands are predominant in Oz.

Good luck!

I'd want to get back home to Australia after visiting a country with
gun-toting idiots walking the streets carrying $5 specials, yellowing out
"howdy" all the time, whose ancestors killed off the native American tribes
to push them off their land.. Deserts full of prickly cactus, rattlesnakes
and sidewinders. Weapons of mass destruction stored all over the country.
With awful TV shows with canned laughter, crap restaurants, and oversize gas
guzzling pickup trucks.

Swell place, America

Regards

David Bennetts

You were making your point just fine until you stepped over the line and
hauled out the TV shows. The country that brought the world Hey Dad and
Stingers needs to tread very gingerly on that topic.

You left out the "good" ones - Kingswood Country, Norman
Gunston, Homicide, Division 4 - you're either too young or
you weren't here long enough.

And Neighbours, E Street, Home and Away, A Country practice,
Number 96, etc for all the soapy lovers.

That's just the tip of the iceberg:-)

On Cliff - there are some tourists you sincerely hope will
listen to their own advice - and stay home.

Cheers, Alan, Australia

What streets you been hangin' out on? Been watching too much TV?

> yellowing out "howdy" all the time,

:)
Huh? Howdy? Been watching old Westerns. I generally just nod,
thank you.

> whose ancestors killed off the native American tribes
> to push them off their land..

They were damn sure pushed off their land, that's for sure; and, er,
I guess there was a little genocide here and there, but they were
never hunted for sport. And our ancestors never killed any group to
extinction, as did yours with the people of Tasmania...

> Deserts full of prickly cactus, rattlesnakes
> and sidewinders.

Hey! I love our deserts, and mountains, and seashores, and wildlife.
We did have Bill Clinton as Prez for 8 years, but the ecomony DID boom.
We now have little Caesar as Prez, but we are all suffering through his
last term, but hey, nothing's perfect.

>Weapons of mass destruction stored all over the country.

Our country is such a jewel on Earth that everybody wants it. It's
called *protection*.

> With awful TV shows with canned laughter,

Have to agree here. TV/movies have gone into the crapper, but there's
lots of good stuff from the past to watch.

> crap restaurants,

Maybe your choices are just bad.

> and oversize gas guzzling pickup trucks.

Have to agree here too about the pig haulers, but at least folks
have that choice if they so desire.

> Swell place, America

Indeed it is. I wouldn't shoot a rabid skunkape trying to leave
Australia.

Hey there,

I recently moved to San Jose. I am trying to get used to monitoring in a city with multiple frequencies. I used to live in Mountain View and it was easy, 2 channels for PD and 1 for FD.

What would be the frequency for the fire department in my area? The closest big intersection would be 280 and Meridian. The police frequency for my neighborhood is 460.325.

Thanks!

Charlie

2774. Bearcat BC100XLT problems

Newsgroup: rec.radio.scanner
Date: 2005-06-28 22:58:56 UTC
From: max-man@hotmail.com
Message-ID: <42c1d52b.137995140@news.freeserve.net>
Source record: 13036

My BC100XLT seems to have the 'standard' fault where there is no audio and the backlight won't illuminate. Other than that it seems okay!

I've tried the relevant repair tips as listed here:

http://repairfaq.ece.drexel.edu/REPAIR/F_BC_Repair.html

I found a shorted 200uf electrolytic but replacing that didn't fix the fault. The transistor at Q201 checks out okay and as I didn't have a spare I carried out the mod to short out the collector and emitter but still no sound or backlight. I've checked the rest of the electrolytics and transistors but cannot find any other faults.

Any ideas please anyone?

Or is there a suitable messageboard where I should be asking about this?

Many thanks

Having seen so little Ozmandian TV so as to be unaware of/unaquainted with its excellence (or lack thereof), it does seem likely that the best "rating system" available for it would be the list of H'ainglish speaking countries whose networks clamor for shows from Oz.

Let's listen........Very muted clamor (and only shows apparently making the Transpacific leap with any ease, that funny reptile feller and a corps of girlish cowhoydens on the "We" (Women's network) channel). Let's see....I get three Spanish networks and only two sporadic Ozzian half hours.....

I've sent a couple emails to Javiation over the past year asking about the avaliability of the new AOR 5000A+3, 3GHz receiver. They still list the old 2600MHz receiver. I don't know if the email address on their site works, I haven't ever received a responce. Anyone know if their email works?

2782. keypad connector on Pro-2052

Newsgroup: rec.radio.scanner
Date: 2005-06-29 03:21:54 UTC
From: Sean <seaningram@tds.net>
Message-ID: <42c21309$1_1@newspeer2.tds.net>
Source record: 13044

Hello, name here is Sean.

I own a Pro-2052 and the white keypad [female] to the main ckt board [male] connector is experiencing a short.

I would like to find an exact connector and re-strip the wires and re-insert new contact terminals inside the connector. These are the connectors that slide right down on to their point of connection. i.e. similiar to ribbon cable type connectors seen in computers, only much smaller.

I noticed the other day that I had no keypad response when selecting a function. My scanner works and has power going to it.

This should be an easy fix rather than sending it to radio shack.

Any help is welcome.

Sean

I'd have to agree, I find Blue LEDs hard on the eyes. Especially in low light conditions. What makes it worse is the plethora of manufacturers who have jumped on the 'loaded with blue LEDs' bandwagon simply because they're relatively new to the market.

Rob.

<< Hey Babe, If you can con enough people to get yourself elected to
a Council >>

and look where, good old BCMN which gave James Janos, pka Jesse "The
Body" Ventura his start in politics...

hmmm maybe a few e-m's to abuse@ci.brooklyn-center.mn.us detailing this
obvious waste of her taxpayer's monies. surfin' the net instead of
doing her council biz????

Much better trolls on aml-z, at least they have some smarts!

<< (-PLEASE- No lectures or legal opinions needed or desired) >>

one given. If I lived in BCMN, I'd be pretty pissed off that a
councilwoman was wasting her citie's resources, i.e. their e-mail and
internet accounts to be posting all the crap I saw you've been posting
all over usenet with one google search. Jesse was a goofball when he
was mayor there, but even he didn't go blowhard at the city's expense
like you've done...

Scanners Unlimited received their first shipment this week. He clams to have received a few more than he had back orders for, so if it's not too late, you might give him a try!

http://www.scannersunlimited.com/

Excellent company to do business with!

My local Uniden distributor says his tech could replace that with a
different color. Lets see just how bad it is

Hey, at least it's not that damn orange color. I like the blue most of
the time myself, but green is probably the best color..

I agree, green is fine, as are red and yellow. But that almost
violet-blue colour just burns the eyes.

I have an blue LCD display in the front of my PC, it doesn't have enough
contrast, but the color is fine..
